Response	Thank you for your continued interest in the High Speed Rail Empire Corridor Program. Suggestions and comments for improvements to the service have been considered in the development of the Service Development Plan for the Empire Corridor High Speed Rail Program. Operating timetables will be examined in detail in the Tier 2 assessments.
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-25	To improve service options for passengers, there needs to be an overnight train across New York State, which would also connect New York State with Toronto. A 10 pm train from NYC to Buffalo would be of great benefit and would provide a morning Toronto arrival from upstate New York.

Response	Thank you for your suggestion regarding overnight service from New York City to Toronto. The scope of the High Speed Rail Empire Corridor Program is focused on improvements between New York City and Niagara Falls. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto. Suggestions and recommendations by the public for improvements to the service have been considered in the development of the Service Development Plan, and operating timetables can be further developed in Tier 2 assessments.
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-26	For the Hudson Valley, there is opportunity for speed improvements, including on the west side of Manhattan where speeds could be increased to 79mph for about half of the 11 miles, from the current 50-70mph. From Poughkeepsie to Albany, speeds should be 110mph on as much as is possible, within the limitation of curves, which would require bridges to be improved. Also, the 3rd station track through Poughkeepsie is often used for Amtrak trains, which limits Amtrak to about 15mph for a couple of miles. This is ridiculous and all 3 current tracks through the Poughkeepsie station should be regular track speed. In addition, a fourth track, closest to the station, should be re-activated and used by Metro-North for some trains starting and ending at Poughkeepsie, so that out of service Metro-North trains are not blocking two of the main tracks.
Response	Thank you for your comments regarding improvements to operating speeds and station operations. Operating speeds and station operations for the routes and segments in the High Speed Rail Empire Corridor Program have been studied in developing the Service Development Plan for the Preferred Alternative and the Tier 1 EIS. The proposed improvements/operations will need to meet both the engineering standards of the supporting railroads and Federal Railroad Administration regulations. The FRA and NYSDOT have considered operating speeds and trip times in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-27	The current, low speed 2.5 mile siding through Beacon should be extended further south by several miles and should be a 90mph track. In the EIS document, this existing siding is referred to as "south of Cold Spring" which is incorrect, as it is north of Cold Spring.
Response	Thank you for sharing the incorrect location for the siding at Beacon, New York. The Tier 1 FEIS document has been corrected with the correct location and limits.
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-28	On page 2-32, it states that the top speed between Croton and Poughkeepsie is 79mph, which is not true.
Response	Thank you for pointing out the possible inaccuracy in the Tier 1 FEIS. Modifications have been made.
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-29	Regarding the discussion of stations, two are in desperate need of parking expansion. The Rhinecliff station should have parking extended further north along the tracks and in fact, this would create a new exit to the north onto Slate Dock Road. Connecting bus service should connect this station with Red Hook, Bard College, and a parking lot at River Road and Route 199. The Buffalo-Depew station also needs more parking, which can be extended

to the east and possible other vacant land in the immediate area. The downtown Buffalo station needs to be rebuilt to serve the growing Buffalo waterfront developments.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service. Station improvements included in each of the alternative are discussed in Chapter 3 of the Tier 1 EIS. Station improvements as part of separate projects have been advancing independently, including the recent complete reconstruction of the Buffalo-Exchange Street Station and parking lot and accessibility improvements at the Buffalo-Depew Station. The FRA and NYSDOT will consider station locations and potential ridership and revenue opportunities in advancing the Preferred Alternative in Tier 2 assessments.

Commenter Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association

Comment 0-29-30 Connecting bus service should be implemented where possible

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. Once the FRA and NYSDOT complete the selection process for a Preferred Alternative under the Tier 1 program, individual projects or groups of projects will be advanced according to the Service Development Plan to Tier 2 environmental evaluations and design development. Suggestions and comments for improving connectivity between different modes of transportation with rail passenger service have been considered in the development of the Service Development Plan. For station projects, opportunities for multimodal connectivity can be pursued with the local municipality and transit provider.

Commenter Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association

Comment 0-29-31 As far as additional track west of Schenectady, increased portions of a 3rd track are desperately needed through the Mohawk Valley, as much congestion occurs in this area due to slow moving freight trains

Response Thank you for your comments. Improvement of passenger rail service and maintaining freight operations along the Empire Corridor is the goal for the High Speed Rail Empire Corridor Program. Alternative 90B would add dedicated third main track for approximately 273 miles between Schenectady (MP 159) and Buffalo-Depew (MP 432). The importance of preserving and improving freight rail traffic to the economy of New York State has been an important factor in the selection of a Preferred Alternative.

Commenter Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association

Comment 0-29-32 about a mile east of the Buffalo-Depew station, a third track would allow for improved flow of freight trains in this area immediately east of major freight yard operations,

Response Thank you for your suggestion regarding track improvements in the Buffalo-Depew area. The Preferred Alternative would add a dedicated third main track extending east of Buffalo-Depew to Schenectady. The Tier 1 Environmental Impact Statement discusses the operation of multiple tracks, and specific track diagrams were developed to support the modeling and simulation of operation using multiple tracks. Comments from the public have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association

Comment O-29-33	From Buffalo to Niagara Falls, this area should be nearly all double tracked, at least 60mph (or 79mph) and the hand thrown switches near Niagara Falls need to be replaced. Also, 2 tracks, one of which could be a stub end or part of the branch line that proceeds north just before the new Niagara Falls station, are needed so that if the station track is taken by train which is being processed by customs, another train could start or terminate at Niagara Falls. It would not be beneficial if an eastbound train is at the station (from Toronto) and a train comes from NYC and it must wait for an hour 300 feet from the station,
Response	Thank you for your comments and suggestions. Improvements to tracks and stations for each alternative are discussed in Chapter 3 of the Tier 1 EIS. The Preferred Alternative, Alternative 90B, includes doubletracking 11 miles along the Niagara Branch. The Niagara Falls International Railway Station and Transportation Center completed in 2016 relocated the station closer to the tourism destinations, 1 mile to the west. Crews still perform train cleaning and minor maintenance at the former station location, which includes layover yards, and trains are turned around in the yard tracks after stopping at the new station.
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-34	With the continued congestion of Sunnyside Yard, NYS should at least look into options of separating the Empire Corridor from Sunnyside Yard,
Response	Thank you for your comments and suggestions. Currently, Amtrak Empire Corridor trains are stored and serviced, between runs, to and from Penn Station in Manhattan at the Amtrak facilities in Sunnyside Yard in Queens, New York. The Amtrak facilities provide servicing for the trains and the ability to turn the equipment for the proper direction of travel. Development of a separate facility in New York City, for the servicing of Empire Corridor trains, is not part of the Tier 1 EIS at this time.
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-35	There was very little discussed in the document about equipment, other than vague references to trainsets.
Response	Thank you for your comments. Equipment requirements provided for in each alternative are discussed in Chapter 3 of the Tier 1 EIS. The Tier 1 EIS is focused corridor level improvements to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. Specific details on equipment needs will undergo a second evaluation (Tier 2) to determine the best solution for the Preferred Alternative (Alternative 90B).
Commenter	Prophet, Gary, Vice President, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-36	I did not see any mention of Dunkirk in the document. With the increased service outlined in the document, one additional train should be considered to operate west from Buffalo to serve Dunkirk, Erie, PA and end in either Cleveland or Toledo.
Response	Thank you for your comments. The High Speed Rail Empire Corridor Program outlined in the Tier 1 EIS focuses on improvements and alternatives on or near the current alignment of the rail passenger service between Albany and Niagara Falls, New York. Selection of the Preferred Alternative by the FRA and NYSDOT focused on the alternatives outlined in the Tier 1 EIS. Extending service to destinations toward Pennsylvania could be part of future studies for expanding service beyond the current area outlined in the Tier 1 EIS.
Commenter	Rudman, Anthony, Empire State Passenger Association, Empire State Passenger Association

Comment O-29-37	<p>I am Anthony Rudman, the Capital District Coordinator of the Empire State Passenger Association. The 1,400 members of our association have been working for over three decades to improve inter-city passenger rail opportunities for New York residents. We support the EIS Alternative 110 as the preferred alternative for the final study report. Because Federal guidelines for developing environmental impact statements are directive, we think that the ridership growth and revenue estimates presented are very conservative and Alternative 110 actually would have revenue and passenger ridership numbers higher than projected in the report. The cost of Alternative 110 is affordable, because it is spread over time and will be drawn from diverse sources.</p> <p>We urge New York State to give its residents the chance to experience a greater travel mobility and economic opportunities by selecting Alternative 110 as the EIS preferred Alternate recommendation.</p>
Response	<p>Thank you for your comments in support of the 110 Alternative, which has been considered in the selection of the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 90B would also provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative.</p>
Commenter	Gianotti, Gary, Empire State Passenger Association, Empire State Passenger Association
Comment O-29-38	<p>My name is Gary Gianotti and I am the Utica-area coordinator of the Empire State Passengers Association. ESPA and myself support the 110 mile per hour alternative.</p>
Response	<p>Thank you for your comment on the High Speed Rail Empire Corridor Program. Support and interest from the public, relating to Alternative 110, have been considered by FRA and NYSDOT in the selection process for a Preferred Alternative. Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative.</p>
Commenter	Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association
Comment O-29-39	<p>‘Alternative 110’ seems to be the favored contender because it offers the biggest bang for the buck.</p> <p>The Empire State Passenger Association the rail advocacy organization I’m a member of supports ‘Alternative 110’ because it allows for the incremental upgrading of the existing rail infrastructure, with each new additional project leading to a gradual improvement in service until it reaches a level of speed, frequency, and reliability far superior to today’s service. It also serves all of the existing stations unlike ‘Alternative 125’ which bypasses Schenectady, Amsterdam, Utica, and Rome.</p> <p>Many people may be disappointed that “true HSR” is not being considered, but the reality is the Empire Corridor thru Upstate New York lacks the population to support “Very High-Speed Rail” (VHSR) with trains traveling up to 200-mph on newly high-speed railways, thus the focus on “Higher Speed Rail” (HrSR) instead.</p> <p>For a VHSR service like the French TGV to be economically viable the new rail lines must have annual ridership numbers of about 10-million, and an all-new-build super system like the Shinkansen or Maglev requires about 50-million passengers annually. In Spain where the national government fueled by EU subsidies plowed ahead with new dedicated high-speed lines regardless of geography, demographics, and economics; ridership has been</p>

disappointing with revenues reportedly even below the level needed to cover yearly operating expenses, let alone to recoup the initial construction costs.

This problem can also be seen in the projections for 'Alternative 125' which would entail the building of a new 125-mph railway from Albany to Buffalo at the cost of \$15 billion, for which annual ridership only would be 4.3 million despite the huge investment. The service would require an annual subsidy of \$59 million, compare to \$24 million in 'Alternative 110' which is roughly equal to what New York State is today now paying Amtrak to run the existing Empire Service.

Response Thank you for your interest in the Empire Corridor High Speed Rail Program. Support and interest from the public, relating to Alternative 110, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. For these reasons, this alternative was dismissed from further consideration

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-40 Based on this in my opinion 'Alternative 110' is indeed the most logically choice, but it also in my opinion could be much improved by the inclusion of the following...
 Tilting Train-sets: Replacing the aging Amfleet coaches as called for in 'Alternative 110' with new tilt-body coaches could further reduce travel times by allowing faster speeds around the numerous curves south of Albany on the Hudson Line, in the Mohawk Valley, and between Syracuse and Rochester.
 By leaning into a curve by 2 to 8-degrees depending on the tilt system, a train can round a curve up to 40-percent faster while maintaining passenger comfort and safety. Tilting trains could boost average speeds into the 70-mph range. Tilting trains have spread from pioneering services like the X2000 to becoming a mainstay of modern passenger rail services.
 Tilting-trains do not necessarily require the locomotive to be tilting so this would not complicate the acquisition of new engines. And the costs of tilt operations could be minimized by using the new state-of-the-art air suspension tilt-systems developed by Japanese manufacturers Fuji, Kawasaki, and Nippon Sharyo, which enable tilt angles up to 3-degrees.

Response Thank you for your comments. Equipment requirements provided for in each alternative are discussed in Chapter 3 of the Tier 1 EIS. The Tier 1 EIS is focused on corridor level improvements to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. Specific details on equipment needs will undergo a second evaluation (Tier 2) to determine the best solution for the Preferred Alternative. Comments from the public, relating to the types of equipment to be operated as part of the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection process for the Preferred Alternative.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-41 125-MPH Speeds: The DEIS rejected 125-mph speeds on the existing CSX right-of-way utilizing the planned infrastructure improvements of 'Alternative 110' because this would require extensive grade-separation due to Federal Railroad Administration standards that while not absolutely forbidding highway grade crossings at 125-mph, are so strict that they can't be technologically overcome.

However the 68-miles between Rensselaer and Poughkeepsie may be another matter since commercial speeds of 125-mph were studied and planned during the Pataki Era HSR program. None of the grade crossings are major roads, they are all low-speed access lanes to riverside farms, homes, and businesses and it's possible that rebuilding the crossings to the highest standards with warning lights, crash barrier-gates, and radar/laser presence detection systems could win a FRA waiver.

Amtrak's next generation of diesel locomotives and coaches will be designed to have top commercial speeds of 125-mph, so it would be a shame not to utilize this capability somewhere on the corridor. The combination of tilting train-sets and speeds up to 125-mph could cut the travel time New York-Albany to just a bit under 2-hrs with an average speed of 75-mph. The biggest benefit however could be in publicity since such service actually meets the international definition of "true HSR".

Response Thank you for your comment regarding safety improvements on the Empire Corridor. Improving safety of rail transportation on the Empire Corridor was considered a key goal of the High Speed Rail Empire Corridor Program for both freight and passenger trains. Chapters 2 and 3 of the Tier 1 EIS address safety for the existing corridor and the program alternatives. Treatments for specific grade crossings would be considered during the development of individual projects designed to implement the Preferred Alternative. Individual projects, or groups of projects, will undergo a second evaluation (Tier 2) to determine the best alternative for that project, or group of projects.

Comments from the public, discussing the safety and the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection process for a Preferred Alternative.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment **0-29-42** JFK Connection: Around the world many international airports have direct intercity rail links allowing passengers to change modes as easy as they change airlines or planes. Frankfurt International is the hub of the 'AIRail Service' where airline passengers from Lufthansa, American Airlines, and Emirates can thanks to a code-share agreement make direct thru-ticketing transfers to the national railway Deutsche Bahn's ICE trains to Stuttgart, Bonn, and Cologne.

Such a rail-air connection could be created for the Empire Service if the present service was extended down the mainline of the Long Island Railroad to Jamaica Station where via the airport's AirTrain people mover a direct connection can be made to all 9 terminals of JFK International.

Just west of Jamaica is Belmont Park, which has a large but mostly unused 4-platform 8-track LIRR station. Intercity trains could be serviced here and thanks to a triangle wye junction with the mainline be turned so they can return back to Albany, locomotive first. Belmont Park is of course a famous thoroughbred race track, the site of a possible casino, and would make an excellent "park n' ride" station for suburban Long Island residents.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The goals and objectives of the program are the improvement of intercity rail passenger service along the Empire Corridor from New York City to Niagara Falls. Projects to further develop connectivity could be part of other projects or studies in the future.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment **0-29-43** Albany-Colonie Station: With increasing ridership a new station in the Capital District will be required given that Schenectady has limited parking and Albany-Rensselaer is constrained by two-lane streets and is on the far less populated side of the Hudson River. Parking is important because the car is the primary form of transport in the Capital District.

An excellent site is actually now available, a 9-acre parcel of industrial land on Railroad Ave next to the Amtrak mainline and right off Fuller Road between SUNY Albany and Wolf Road that is on the market for \$2.25-million. No need for lengthy eminent domain proceedings, immediate purchase of this property would secure an excellent central location for a regional 'park-and-ride' station adjacent to the interchange of the I-90 and I-87. The station could also be tied into the UAlbany Bus and CDTA BusPlus services.

The NYS Senate HSR Task Force in its 2006 report recommended a new station in the "vicinity of the State Campus on the west side of Albany" to be built "in parallel" with the new Albany-Schenectady second track.

Response Thank you for your comment on a new Albany Station location. The Tier 1 EIS for the High Speed Rail Empire Corridor Program evaluated a range of corridor-level service improvements for intercity passenger rail with the purpose of making decisions on system wide level service, including service reliability, frequency, and train speeds. The Tier 1 EIS considers using the existing stations in each of the alternatives; the inclusion of additional stations along the Empire Corridor would be part of future studies for expanding service.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-44 Extended Service: With the proposal to increase Albany-New York frequencies from today's 13-round trips to 17, some of these trains should be extended to Schenectady and Saratoga Springs to provide early morning departures and late evening arrivals. In the 1980s Schenectady had such service because the old Turboliners trains were double-ended with streamline cabs, allowing for bi-directional travel to and from Schenectady. However another option today is to run a late evening train to Saratoga Springs where it could be turned for a return trip by using a wye just south of the station. The Saratoga Springs Rail Station also has two storage tracks where a train can be kept overnight; there should be little interference with the tourist train operations of the Saratoga & North Creek Railway or the freight operations of CP Rail. After an overnight layover the train would be ready for an early morning departure to New York City, stopping also at Schenectady and my proposed Albany-Colonie station. Also even without push-pull bidirectional train-sets the use of cab-cars at the end of future train-sets might be useful to ease the necessary turning of train-sets at wyes at Niagara Falls, Saratoga Springs, Rutland, Rensselaer, and Belmont Park.

Response Thank you for your comment on the HSR Empire Corridor Program. The program considers improvement alternatives for the Empire Corridor between New York City and Albany and Albany to Niagara Falls. Suggestions and comments, for improvements to the service outside of these limits, including service extending to Saratoga Springs, have been considered in the Service Development Plan for the High Speed Rail Empire Corridor Program.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-45 Overnight Service: The 7½ hour travel time New York City-Niagara Falls in 'Alternative 110' is too long for a practical day-trip, however it is ideal for an overnight sleeper train service like that offered by German's 'City Night Line' which despite low budget airlines and high-speed rail has been reinvested in by Deutsche Bahn. The attraction of such services is that they combine air travel and hotel stays into one vehicle, the train being essentially a moving hotel. No need for a red-eye flight or the hassle of travel to and from the airport. You check-in late in the evening in one city and wakeup in another city well rested. Such a service with a 9-hour schedule travel time between New York City and Buffalo-Niagara might prove popular to both business and leisure travelers including foreign

tourists. New York-Montreal is another potential route for such an overnight “hotel-train” service.

Response Thank you for your comment on the High Speed Rail Empire Corridor Program. The purpose of the program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. Comments from the public, supporting the program, have been considered by the FRA and NYSDOT in selecting the Preferred Alternative. The program considers improvement alternatives for the Empire Corridor between New York City and Niagara Falls. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto. Further improvements or enhancements to the service can be studied in the future, and operating timetables can be further developed as part of Tier 2 assessments.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-46 However I’m not in favor of building a new station [Buffalo-Exchange Street Station] because there really is no longer a viable alternative site for a downtown station that would also be close to the Metro Rail. I believe that instead the existing station could actually be greatly improved. The existing red brick station was built in the 1950s by the New York Central and architecturally is not bad, but does need to be greatly improved and expanded. It seems to me that on the east side an entirely new waiting room/rest room annex could be built with little trouble, perhaps tripling the size of the existing station. It should have a high floor-to-ceiling height and large windows that flood the waiting room with natural light. It should also have its own entrances to the front taxiway and rear platform. The existing low-level platform should be replaced in part with a high-level platform immediately to the east of the current station building. Given that the line was once double track there is space to lay a 2nd track that could reroute freights around the platform track. The new platform should be covered by a canopy and be heated in the winter time. The station’s pedestrian connections to Main Street and the NFTA Metro Rail should be enhanced thru proper street signage. A pedestrian railroad crossing and sidewalk up to Washington Street could be built just west of the station that would allow passengers to more directly connect with new waterfront development and the Metro Rail. The sidewalk should be heated and covered. Finally purchasing an existing surface parking lot just east to the station could greatly expand parking for use by Amtrak passengers, providing perhaps by about 200 hundred spaces. The parking lot should be secured by being fenced in and under video surveillance. Parking at Buffalo-Depew should also be greatly expanded into the empty land to the east, parallel to the existing platform.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the improvements needed to the existing stations in Buffalo, New York. Improvement to the passenger rail facilities in the Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. The focus was on utilizing existing stations along the Empire Corridor including the stations at Buffalo-Depew and Buffalo-Exchange Street. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station over the Central Terminal location. Some of the primary reasons for the selection of the downtown site included economic benefits to

the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-47 In summary 'Alternative 110' provides the best blue print for accelerated intercity passenger service appropriate to the size of our Upstate population and economy and at a financial cost which is within the capability of New York State.

Response Thank you for your comment and support of 110 Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 90B would also provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative. The existing station stops on the route would remain in service and the frequency of trains would increase for the western portion of the Empire Corridor from 4 roundtrips west of Albany to 8 roundtrips. Support and interest from the public, relating to Alternative 110, have been considered by FRA and NYSDOT in the selection process for a Preferred Alternative.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-48 "On the Right Lines? The Limits of Technological Innovation"
On page 191 he writes that "once traffic-generating potential drops below ten million passengers per annum, the new-build option becomes very hard to substantiate." On page 188 he writes that "it seems unlikely that a major new ground transport system such as MAGLEV will really be viable unless it can attract passenger flows of the order of fifty million per annum".
I don't support Alternative 125 because one it skips Schenectady, Utica, and Rome; but primarily because it seems to me that Upstate NY doesn't have the population or economy to support such a construction project, which even after it is completed, Rochester and Buffalo would seem to still be beyond the 3 to 4 hour travel time where HSR can successfully capture a large market-share of combined air-rail intercity travel.

Response Thank you for your comments. Alternative 125 has been dismissed from further consideration in part based on its costs, it is the costliest alternative.

Commenter **Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association**

Comment 0-29-49 Alt 110 is in terms of costs and benefits is the most logical choice, the biggest bang for the buck. I think speeds up to 125-mph could be feasible south of Rensselaer to Poughkeepsie with grade crossing upgrades and a FRA waiver, and perhaps on portions of new dedicated 110-mph track should grade separation of significant lengths of the line be accomplished at some future date. But overall a new dedicated third track along the existing is the way to go Albany to Buffalo be it at 90, 110, or 125-mph.

Response Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. For these reasons, this alternative was dismissed from further consideration. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional tracks to better segregate passenger and freight rail.

Commenter	Turon, Benjamin J., Empire State Passenger Association, Empire State Passenger Association
Comment 0-29-50	I support the Alternative 110, with one caveat. My caveat is that the State should consider the use of tilting train sets for the new train sets to replace the Am Fleets. I believe the use of tilting trains could significantly cut the travel time by maybe, you know, five, ten minutes between city pairs by going faster around the curves.
Response	Thank you for your comment supporting the 110 Alternative. Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative. Consideration of the types of locomotives and rolling stock will be part of the second evaluation (Tier 2) to determine the best alternative for that project, or group of projects, that will meet the goals of the program. Use of tilt trains on the route may require further study. The clearances for the tilt train wheel and axle assemblies may not meet the recommended allowances to operate on lines equipped with third rail that the Empire Corridor trains must use on both Metro North Railroad and in Pennsylvania Station, New York.
Commenter	Wierowski, David C., Empire State Passenger Association, NARP, Empire State Passenger Association, NARP
Comment 0-29-51	1. Secure funding to install additional RR bridge over Park Street (west of station) move existing switch west end approach to platform, to west of Park Street. Install high speed switch. Add additional switch to station track to allow 2nd track to be installed on south side of existing raised platform (it is almost ready to go) Extend that track to connect to north platform station track to the east of existing platform. Extend high level platforms, both east and west. This added bridge over Park Street would be asset to both Amtrak and CSX, should CSX decide to reconstruct existing 2 track bridge over park street, they would have a detour if construction occurs.
Response	Thank you for your suggestions and recommendations. Operations in the Syracuse area of the Empire Corridor are being addressed in a separate project by NYSDOT, the Syracuse Congestion Relief Project, that will focus on improving the operation of both freight and passenger trains in the area between Syracuse Station and East Syracuse.
Commenter	Wierowski, David C., Empire State Passenger Association, NARP, Empire State Passenger Association, NARP
Comment 0-29-52	2. For higher speed a third track to be installed at critical locations to allow for faster speeds for Amtrak, and in certain areas where needed, third track installation with super elevation (banked curves) to allow for faster speeds on tight curves thruout system (NYS) improved grade crossing warning with double locked gates, like in England and Europe. Grade crossing elimination where possible.
Response	Thank you for your comment regarding the need for additional tracks on the Empire Corridor High Speed Rail Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, the majority of which consists of dedicated third track, as outlined in Volume 2 of the Tier 1 EIS. Track and infrastructure design will need to conform to Federal Railroad Administration requirements and regulations. Provisions will need to be included in the design to support the safe operation of all trains on the route.
Commenter	Wierowski, David C., Empire State Passenger Association, NARP, Empire State Passenger Association, NARP

Comment
O-29-53 We also, last year, toured England and Europe, and observing some of the characteristics that they have in their rail networks, one of the things that, in comparison and as far as the safety aspect the gentleman that was just behind me spoke about, grade crossings, a lot of grade crossings in England use a method of locking down the approach to the -- to the grade crossing, and there are certain areas in this country that are experimenting with that system of double gates on both sides of the highway that cross the grade crossing at level grade crossings for safety reasons. And this is a big thing. I'm sure you folks have been working on that with CSX because they're the primary corridor owners here, but this would be a great improvement to help out with the -- the warning system on approaching trains. I notice that, in Ohio and Indiana, Norfolk Southern has put in amazing grade crossings with overhead lighting even on the smallest of highways, like, it was unbelievable. So whether or not CSX is going to get together with Amtrak or whatever, the DOT, to do those improvements, that would -- that would help immensely in speed.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. Chapters 2 and 3 address safety for the existing corridor and the program alternatives, and proposed safety and design measures will be further developed in the Tier 2 assessments. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection process for the Preferred Alternative.

Commenter **Wierowski, David C., Empire State Passenger Association, NARP, Empire State Passenger Association, NARP**

Comment
O-29-54 Of course, the high speed -- high speed, I would love to see this at 110 miles an hour in my lifetime

Response Thank you for your interest and support of Alternative 110. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 90B would also provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative.

Commenter **Wierowski, David C., Empire State Passenger Association, NARP, Empire State Passenger Association, NARP**

Comment
O-29-55 It's -- it's one of those things that our in infrastructure here, dealing with a freight railroad, you almost have to start separating, and I really would love to see the top speed here, the 110, to get -- get away in certain corridors, certain areas, get away from the freight road bed because, like he says, the -- the one and a half mile long freight trains that CSX runs around back and forth throughout this country, CSX and Norfolk Southern, BNSF, Union Pacific, the big four, they've put a lot of pressure on that roadbed.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS for the High Speed Rail Empire Corridor Program reviews the operation of multiple tracks along the Empire Corridor, including developing specific track diagrams and modeling/simulation of rail operations, to identify the necessary infrastructure projects that will improve travel times and the reliability of service. Alternatives 90B and 110 would restore large sections of third and fourth track, but the Preferred Alternative (Alternative 90B) would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.

Commenter **Olson, Milo, Energy Solutions, Energy Solutions**

Comment O-30-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Compromised or limited service on the current freight network may force my company to alter our business operations and begin shipping more products by truck – increasing cost, increasing our environmental footprint and increasing traffic on New York roadways.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Specifically in the Tier 1 EIS, Chapters 3 and 4 discuss the positive impacts of the program, with Section 4.3 Regional Population and Employment, and Business Districts, discussing how the program will create employment opportunities and support the labor markets in the regions served by the improved rail service.

Commenter Olson, Milo, Energy Solutions, Energy Solutions

Comment O-30-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Ardito, David, Environmental Rail Solutions, Inc., Environmental Rail Solutions, Inc.

Comment O-31-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Environmental Rail Solutions, Inc., the company I represent, relies heavily on the very busy corridor in New York. 85% of our freight business will be greatly impacted and will cause serious delays, delays we cannot afford. We rely 100% on the railroad for our freight business. We are generating over \$15,000,000.00 in freight and the cost would double if we would have to increase the number of rail cars to move our freight to offset the increase in delays

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As discussed above, this alternative would better segregate passenger and freight rail operations and would reduce travel delays for both types of rail. Improvement of passenger rail service, while maintaining freight operations along the Empire Corridor, is one of the goals for the HSR Empire Corridor Program. Minimizing interference with freight rail operations is one of the six performance objectives of the High Speed Rail Empire Corridor Program. The importance of preservation and the improvement of freight rail traffic to the economy of New York State has been a critical factor in the selection of a preferred alternative.

Commenter Ardito, David, Environmental Rail Solutions, Inc., Environmental Rail Solutions, Inc.

Comment O-31-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative.
Commenter	Elhakim, Diane, Evonik Corporation, Evonik Corporation
Comment O-32-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations. We rely on the existing freight rail network for the efficient, reliable and economical transportation of goods. As a shipper of bulk chemicals, many hazardous in nature, Evonik tries to ship as much as we can on the railroads, as rail has proven to be the safest method of transportation for such shipments. To ship more by truck would mean dangerous chemicals moving on our highways, through our cities, past our schools. The danger of an accident increases with every truck shipment. In addition, for the safety of our plant personnel and customer recipients, there is one loading and unloading for each railcar as opposed to four or possibly five for the same amount of product shipped by truck. Less handling means less risk of spillage and potential injury.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative would better segregate passenger and freight rail operations and would reduce travel delays for both types of rail. .
Commenter	Elhakim, Diane, Evonik Corporation, Evonik Corporation
Comment O-32-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations. They also would impede the ability of the freight rail network to keep pace with and serve the needs of a growing upstate economy.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Elhakim, Diane, Evonik Corporation, Evonik Corporation
Comment O-32-3	I urge the state to maintain current freight service and the capacity for growth by selecting the base alternative.

Response Thank you for your comments on the Tier 1 DEIS and the preference for an alternative that will allow for growth of the freight. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity on the Empire Corridor.

Commenter **Kuhr, Jim, Director of Brewery Operations & Brewmaster, The Matt Brewing Company Inc., The Matt Brewing Company Inc.**

Comment O-33-1 We urge the state to consider the impact on freight rail operations when selecting an alternative for the High Speed Rail project.
Our company is a brewery in Utica, New York. Our sales are about \$50,000,000 and we employ 125-130 people. Our business is growing and we expect to do a capacity expansion in the next year or two. A key ingredient for our brewery is malt. We use approximately 21,000,000 pounds of grains per year and we receive most of this by rail, accounting for over 70 cars a years. Rail is the most efficient way to transport this quantity of malt and thus it is a key input to our business.
If rail delivery of grains were to become more difficult, expensive or unreliable, we would be forced to receive more grains by truck which would increase costs and cause a cascading effect of increasing our environment footprint and increasing traffic on New York roadways.
Advancing high speed passenger rail at the detriment of freight rail would limit opportunities for business and job growth and would be detrimental to the state economy.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative would better segregate passenger and freight rail operations and would reduce travel delays for both types of rail.

Commenter **Hiser, Lynn, VP of Logistics, Fairmount Minerals, Fairmount Minerals**

Comment O-34-1 As VP of Logistics for Fairmount Minerals, I am very concerned about the proposed high speed rail corridor that could negatively affect business operations. Fairmount Minerals is a major shipper of bulk commodities and we rely on the existing freight rail network for the efficient, reliable and economical transportation of our product.
Compromised or limited service on the current freight network may force Fairmount Minerals to alter our business operations and begin shipping more products by truck – increasing cost, increasing our environmental footprint and increasing traffic on New York roadways. Or worse, force us to do less business in New York thus impacting jobs & tax revenues.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Hiser, Lynn, VP of Logistics, Fairmount Minerals, Fairmount Minerals**

Comment O-34-2 I strongly encourage the selection of the base alternative to maintain shippers ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Canine, Rick, President, Federal Maglev, Inc., Federal Maglev, Inc.
Comment O-35-1	<p>On March 30, 2001, the Federal Railroad Administration released their Record of Decision for their Maglev Deployment Program. The Final Programmatic environmental Impact Statement compared these three rail alternatives to automobiles:</p> <ul style="list-style-type: none"> · Accelerail: steel-on-steel, shared freight right-of-way, diesel or electric powered, top speeds 90 to 110 mph. · Bullet Train: steel-on-steel, exclusive right-of-way, electric propulsion, speeds up to 200 mph. · Maglev: no-contact, exclusive guideway, electric propulsion, speeds of 300 mph or more. <p>The FRA determined that Maglev “is not only the preferred alternative from an overall standpoint, but also the preferred alternative from an environmental standpoint.” To reiterate, we were disappointed that this environmentally preferred, advanced ground transportation system was not included in your DEIS. If you are truly interested in protecting the environment in the state of New York, we ask that Maglev be added to the DEIS. We would be willing to provide information about Maglev to the DEIS authors.</p>
Response	Thank you for your comments on the application of Maglev technology on the Empire Corridor. In developing the alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor Program, very high speed (VHS) alternatives were considered, but were not selected in part because they were considered to be cost-prohibitive. In addition, they would bypass all but four of the existing stations along Empire Corridor West. Moreover, as noted in the Tier 1 FEIS on page 3-8 “alignments beyond the existing railroad corridor would be expected to have greater impacts to the natural and human environment than alternatives that follow the existing railroad corridor.” The Tier 1 EIS builds on using existing railroad infrastructure and would provide interconnectivity with other passenger rail networks in New York State and the Northeast Region.
Commenter	Canine, Rick, President, Federal Maglev, Inc., Federal Maglev, Inc.
Comment O-35-2	<p>I was disappointed though that magnetic levitation (maglev) was not included in the study. There are three unique versions of maglev, all of which use linear electric motors. Our company is a promoter of one version, which uses permanent magnets and goes 300+ mph. We are currently working on a 400+ mile project here in the U.S. similar to yours, so in comparison, your 438 mile project would cost about \$9.6 billion and take 3 years to construct. We are always asked, “How can you do that?”</p> <p>First, our Maglev is always elevated about 20 feet high. When we go 300+ mph, we cannot safely allow anything to get in our way. And we save money by doing this.</p> <p>Second, we do not purchase right-of-way and do not excavate a roadbed. We allow auto traffic to go under the Maglev, we do not divide neighborhoods, communities, or farms, and we mitigate damage to wildlife habitat and ecosystems.</p> <p>Third, our Maglev is electrically powered without overhead wires. It is quiet with no engine or wheel noise, no train horns at crossings, and no vibration of the surrounding landscape.</p>
Response	Thank you for your comments on the Tier 1 DEIS on using Maglev for the High Speed Rail Empire Corridor Program. The five alternatives considered in the Tier 1 EIS build on existing railroad technology and can be supported with existing railroad infrastructure, and, therefore, could provide interconnectivity with other passenger rail networks in New York State and the Northeast Region.
Commenter	Canine, Rick, President, Federal Maglev, Inc., Federal Maglev, Inc.

Comment O-35-3 Your project of 4.3 million passengers annually could be financially feasible without considerable subsidy. Although it was stated in the DEIS numbers, we are appalled that the text of the DEIS did not specifically point that out.

Response Thank you for your analysis of ridership and revenue for the High Speed Rail Empire Corridor Program. The levels of financial support and investment for each of the alternatives are discussed in Chapter 6 of Volume 1 of the Tier 1 EIS. Exhibit 6-9 – Comparative Analysis of Alternatives notes that Alternative 125's subsidy per rider would be \$14, which is three dollars lower than if the Base Alternative were selected.

Commenter Barcelona, Dean, Ferraro Foods, Ferraro Foods

Comment O-36-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.

Commenter Barcelona, Dean, Ferraro Foods, Ferraro Foods

Comment O-36-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.

Commenter Polbos, Andy, Freight, Freight

Comment O-37-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Polbos, Andy, Freight, Freight

Comment O-37-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. Comment O-44-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. As outlined above, the Preferred Alternative, Alternative 90B, would provide additional trackage and would improve both passenger and freight rail capacity and operations.
Commenter	Kennedy, David, Freight, Freight
Comment O-44-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Fortin, Eric, Freight, Freight
Comment O-45-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. As outlined above, the Preferred Alternative, Alternative 90B, would provide additional trackage and would improve both passenger and freight rail capacity and operations.
Commenter	Fortin, Eric, Freight, Freight

Comment O-45-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Maheras, Greg, Freight, Freight
Comment O-46-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. As outlined above, the Preferred Alternative, Alternative 90B, would provide additional trackage and would improve both passenger and freight rail capacity and operations.
Commenter	Maheras, Greg, Freight, Freight
Comment O-46-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Cutler, Harris, Freight, Freight
Comment O-47-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Riccio, Jr., Anthony M., Harlem River Transportation and Distribution Center, Harlem River Transportation and Distribution Center
Comment O-62-1	For the future, rail rights of ways have to be widened to accommodate both freight and passenger service. Having worked in transportation for Municipal Government and the private sector for the past 40 years, I have seen the rail freight industry deteriorate. The notion of having high speed rail and freight service co exist is just plain fantasy. Let's work together to develop a true rail freight plan for the NYS Business community. Politics has no role in this planning. I therefore support the base alternative with the proviso that affirmative action is taken to address the problems discussed above.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the

Comment O-64-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments discussing the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will

	involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Haikalis, George, President, Institute for Rational Urban Mobility, Institute for Rational Urban Mobility
Comment O-65-1	IRUM fully supports public investment in incremental passenger and freight rail improvements in the NY-Buffalo Empire Corridor.
Response	Thank you for your support and endorsement of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Haikalis, George, President, Institute for Rational Urban Mobility, Institute for Rational Urban Mobility
Comment O-65-2	The DEIS provides an important beginning point in identifying the impacts of alternative passenger rail investment strategies, particularly for the Schenectady-Buffalo portion of the corridor. However, the DEIS does not fully address the range of alternatives and impacts that should be considered. Advancing a program of capital investments and service enhancements for both freight and passenger systems could produce significant gains to the upstate economy, which lags far behind the growth enjoyed by the NYC metropolitan area.
Response	Thank you for your comments on the Tier 1 DEIS and on how the program will offer significant economic gains to the region. The Tier 1 EIS – Chapter 3 “Alternatives” presents a full range of the alternatives that were reviewed in Section 3.1 “Alternative Development and Screening” and Exhibit 3-3 “General Elements of the Alternatives.” In developing the alternatives outlined in the Tier 1 EIS, a wide range of options were considered from some that used existing technologies with no gains in maximum operating speeds to others that required dedicated right-of-way’s and electrified operations. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Haikalis, George, President, Institute for Rational Urban Mobility, Institute for Rational Urban Mobility
Comment O-65-3	It is important to note that a 110 mph maximum speed is already a starting point for all the alternatives considered in the DEIS. Much of the Schenectady-Poughkeepsie segment of the Empire Corridor currently has this top speed. Extending this speed to additional track segments west toward Niagara Falls could be considered as part of a series of incremental upgrades.
Response	Your comment in support of the 110 alternative has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. For these reasons, this alternative was dismissed from further consideration.
Commenter	Haikalis, George, President, Institute for Rational Urban Mobility, Institute for Rational Urban Mobility

Comment O-65-4	the DEIS should balance this with other public benefits that would occur if somewhat more frequent and higher performing passenger service were operated.
Response	Thank you for your comments on comparing benefits from the different alternatives with other public benefits. The selection of Alternative 90B as the Preferred Alternative by the FRA and NYSDOT considered service strategies that are discussed in the Tier 1 EIS for each of the alternatives. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations.
Commenter	Haikalis, George, President, Institute for Rational Urban Mobility, Institute for Rational Urban Mobility
Comment O-65-5	Instead of expanding track capacity on the existing corridor, some freight trains could be operated on the Southern Tier, using existing freight lines.
Response	Thank you for your comments on expanding the analysis of freight operations to the Southern Tier. The High Speed Rail Empire Corridor Program outlined in the Tier 1 EIS focuses on improvements and alternatives on or near the current Empire Corridor alignment of the rail passenger service between Albany and Niagara Falls, New York. Selection of Alternative 90B as the Preferred Alternative by the FRA and NYSDOT will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Haikalis, George, President, Institute for Rational Urban Mobility, Institute for Rational Urban Mobility
Comment O-65-6	The DEIS should be expanded in an effort to take a make more comprehensive examination of these issues.
Response	Your comments on expanding the Tier 1 EIS to include a more comprehensive review of the issues may be a project beyond the scope of the High Speed Rail Empire Corridor Program. The Tier 1 EIS evaluated a range of alternatives and focused on the alternatives considered in the Tier 1 DEIS. The Tier 1 FEIS and Service Development Plan focused on Alternative 90B, the Preferred Alternative, while the Tier 1 DEIS discussed and reviewed the five alternatives that were considered in the documents.
Commenter	Oberting, Gregory, Interstate Commodities, Interstate Commodities
Comment O-66-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations. We rely on the existing freight rail network for the efficient, reliable and economical transportation of goods.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles

	of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Oberting, Gregory, Interstate Commodities, Interstate Commodities
Comment O-66-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.
Commenter	Margiotta, James, J. Margiotta Company, J. Margiotta Company
Comment O-67-1	I urge the state to consider the impact on freight rail operations when selecting an alternative
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Margiotta, James, J. Margiotta Company, J. Margiotta Company
Comment O-67-2	In selecting an option, I encourage the state to maintain freight connectivity and the capacity to expand such service in the future by not commingling freight and high speed rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Ashcraft, Jeff, J.B. Hunt Transport, Inc., J.B. Hunt Transport, Inc.
Comment O-68-1	In 2013, we originated and terminated almost 70,000 loads via New York intermodal facilities, with almost half of those loads moving on CSX tracks in the Empire Corridor. And an even larger number of loads passed through New York on their way to and from other points in the Northeast. With such large volume on the rails, we are concerned about the potential commingling of freight and passenger rail services such as being proposed by the State of New York and the FRA.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for

business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor. This alternative will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Ashcraft, Jeff, J.B. Hunt Transport, Inc., J.B. Hunt Transport, Inc.

Comment O-68-2 We urge the State to consider strongly the impact on freight rail operations when selecting one of the five alternatives being proposed. Since greater preference should be given to alternatives with the least impact on freight, the “base” alternative appears to be the best option, at this time.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.

Commenter Wynne, Daniel, Judge Organization, Judge Organization

Comment O-69-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Wynne, Daniel, Judge Organization, Judge Organization

Comment O-69-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would provide additional trackage and would improve both passenger and freight rail capacity and operations.

Commenter Painting, Joe, Lansing Trade Group, Lansing Trade Group

Comment O-70-1 The proposed commingling of freight traffic and high speed passenger traffic and the required concessions is a tactical error with a far reaching and profoundly negative impact. This would impede the ability of the freight rail network to keep pace with and serve the needs of a growing economy in upstate NY and most of New England for the sake of convenience for what will amount to a small handful of travelers.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote

	economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Painting, Joe, Lansing Trade Group, Lansing Trade Group
Comment O-70-2	I urge the state to maintain current freight service and the capacity for growth by selecting the base alternative.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would provide additional trackage and would improve both passenger and freight rail capacity and operations.
Commenter	Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition
Comment O-71-1	The Livingston Avenue Bridge Coalition and the undersigned organizations represent thousands of New Yorkers committed to seeing the Bike and Pedestrian Walkway on the Livingston Avenue Bridge restored when this bridge is rebuilt or replaced as part of the Empire Corridor project. Although site-specific impacts of the selected program will be determined in Tier 2 evaluations, it is important to set the stage for the future of this critical bicycle and pedestrian connection...
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition
Comment O-71-2	...the report should acknowledge the significant local and regional support for the Livingston Avenue Bridge Walkway.
Response	Thank you for your comments on the Livingston Avenue Bridge. The Tier 1 FEIS (Section 7.7) notes the public support for the pedestrian walkway and bicycle path on the bridge in the comments received on the Tier 1 DEIS.
Commenter	Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition
Comment O-71-3	The DEIS should contain general and relevant specific review of all transportation projects in the corridor, as well as a consideration of all activities reasonably foreseeable in each of the geographic areas of the program. The DEIS document should incorporate information based on the planning documents of other federal agencies, and state and local governments, including the studies highlighted below
Response	Thank you for your comments on including a review of all projects in the corridor. The Tier 1 EIS for the High Speed Rail Empire Corridor Program focused on improving passenger rail service between New York City and Niagara Falls. The Tier 1 FEIS considers how it will

relate to other transportation projects in New York State and their environmental impact, including discussion of other related station improvements (Section 2.5.5), cumulative impacts (Section 4.24 and Appendix G.21), and other HSR projects (Appendix E.3.1). Appendix G.1 (Exhibits G-2 and G-3) addresses consistency with state, regional, and local plans. Additional information on NYSDOT High Speed Rail Projects along the Empire Corridor can be found at:

<https://www.dot.ny.gov/empire-corridor>

Commenter	Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition
Comment O-71-4	DEIS should take into consideration that the Livingston Avenue Bridge was added to the Capital District Transportation Committee's Transportation Improvement Program in 2009 in anticipation of ARRA funding contingent on restoring pedestrian and bicycle accommodations across the bridge.
Response	Thank you for your comments on the Livingston Avenue Bridge. The Tier 1 FEIS notes the public support for the pedestrian walkway and bicycle path on the bridge.
Commenter	Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition
Comment O-71-5	page 3-24 of the DIES identifies the specific goals of the "Livingston Avenue Bridge Replacement Project" to "improve safety / reliability, travel time, remove speed / weight restrictions, increase capacity," but does not highlight the additional transportation goal of restoring safe and convenient bicycle and pedestrian access across the bridge as identified in several local and regional transportation studies
Response	Thank you for your comments on the Tier 1 DEIS. The Tier 1 FEIS for the High Speed Rail Empire Corridor Program addresses comments received indicating support for providing pedestrian/bicycle access on the Livingston Avenue Bridge.
Commenter	Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition
Comment O-71-6	we request inclusion of the following in the Tier 1 EIS <ul style="list-style-type: none"> · Acknowledge material from transportation and land-use studies and plans relating to the Livingston Avenue Bridge and Walkway · Acknowledge community and municipal support for the Livingston Avenue Walkway · Conduct a Title VI and Environmental Justice Analysis of the scenarios, specifically identifying potential mitigation measures for Environmental Justice Areas surrounding the Livingston Avenue Bridge · Recognize the 2002 Federal Rail Administration report on Rails with Trails and the report's guidance on potential development of Rail-with-Trail facilities along the Empire Corridor
Response	Thank you for your comments discussing the importance of a bike and walkway on the Livingston Avenue Bridge. The Tier 1 FEIS notes the public support for the pedestrian walkway and bicycle path on the bridge.
Commenter	Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition
Comment O-71-7	I represent a group of organizations called Livingston Avenue Bridge Coalition. We are a coalition. We are a number of different advocacy organizations and groups, like Restore Our Waterfront... We have several studies dating back well over a decade, planning studies done on both sides of the river, including the Albany Comprehensive Plan, the Tech Valley Trails Plan,

which prepared by our regional MPO. The City and County of Rensselaer, City and County of Albany have all invested significant public dollars in preparing planning documents that identify the benefits of the walkway. So that information is out there for the taking and I hope that it's included.

That being said, there were resolutions of support for reestablishing the walkway passed in the City of Albany, Albany County, the City of Rensselaer, Rensselaer County and the Hudson River Valley Greenway and Greenway Conservancy.

Response Thank you for your comments on the importance of the bike and walkway on the Livingston Avenue Bridge. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. Individual projects, or groups of projects, will undergo a second evaluation (in Tier 2) to determine the best alternative for that project, or group of projects. The Livingston Avenue Bridge (LAB) is currently undergoing a separate and independent evaluation in an Environmental Assessment (EA). NYSDOT seeks public input on the LAB improvements and offers a number of avenues for public input. The Livingston Avenue Bridge Environmental Assessment is examining alternatives, including options with pedestrian/bicycle accommodations

Commenter Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition

Comment 0-71-8 Secondly, I think this is a significant environmental justice issue. And while we have these trains going through the communities, I don't think it's too much to ask that there be a benefit provided to the people that are going to be most affected by these trains going through.

Response Thank you for your comment on the Livingston Avenue Bridge Project. We recognize its importance to the neighborhoods at both ends of the bridge in Albany and Rensselaer.

Commenter Daley, Martin, Founder, Livingston Avenue Bridge Coalition, Livingston Avenue Bridge Coalition

Comment 0-71-9 The last issue in relation to safety and security. Actually, the Federal Rail Administration literally wrote the book on the safety of these facilities and Best Management Practices back in 2002 with a report called "Lessons Learned."
...making sure that the environmental justice issue, the planning issue, the public support and the safety issues are documented in the DEIS as we move forward. We are also looking forward to this bridge. It's a significant bottleneck for the corridor and we are hoping that this can be kind of fast-tracked in that process, given a high priority for replacement.

Response Thank you for your comments on the importance of the Livingston Avenue Bridge to the communities near the bridge, and the support for inclusion of a bike and walkway on the bridge. The Tier 1 FEIS (Section 7.7) notes the public support for the pedestrian walkway and bicycle path on the bridge in the comments received on the Tier 1 DEIS.

Commenter La Rue, Greg, Louis Dreyfus Commodities, Louis Dreyfus Commodities

Comment 0-72-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increase the attractiveness of the region for business.

The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter La Rue, Greg, Louis Dreyfus Commodities, Louis Dreyfus Commodities

Comment O-72-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Perry, Kevin, Lowes, Lowes

Comment O-73-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Perry, Kevin, Lowes, Lowes

Comment O-73-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.

Commenter Jordan, James, Magnetic Glide, Magnetic Glide

Comment O-74-1 This comment is provided to make the citizens and leadership of New York aware of a better alternative for high speed guided surface transport, called Maglev 2000, which is the 2nd generation superconducting Maglev transport system

Response Thank you for your comments on the application of Maglev technology to the improvement of intercity rail service on the Empire Corridor. In developing the alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor Program, very high speed (VHS) alternatives were considered, but were not selected in part because they were considered to be cost-prohibitive and would bypass all but four of the existing stations along Empire Corridor West. Moreover, as noted in the Tier 1 FEIS on Page 3-9 "alignments beyond the existing

corridor would be expected to have greater impacts to the natural and human environment than alternatives that follow the existing railroad corridor.” The Tier 1 EIS builds on using existing railroad infrastructure and would provide interconnectivity with other passenger rail networks in New York State and the Northeast Region.

Commenter **Jordan, James, Magnetic Glide, Magnetic Glide**

Comment O-74-2 It would be a serious public policy error to ignore the Maglev alternative as the DEIS is considered by the citizens of New York.

Response Thank you for your comments on the program. As noted above, very high speed alternatives were considered, but were deemed both cost-prohibitive and would involve far greater right-of-way and environmental impacts than the Preferred Alternative 90B. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. The Tier 1 EIS for the High Speed Rail Empire Corridor Program outlines five alternatives that utilize existing railroad technology. This would continue to allow trains from the Empire Corridor to utilize the tracks of Metro North Railroad and Amtrak to reach Penn Station in New York City. Continued operation of passenger trains to Penn Station in New York City allows the Empire Corridor to be part of a larger network of passenger trains in the Northeast United States.

Commenter **Jordan, James, Magnetic Glide, Magnetic Glide**

Comment O-74-3 We observed that the DEIS did not mention the 2nd generation Maglev. Not considering Maglev is a serious policy error.

Response Thank you for your comments on the benefits of Maglev technology. The Tier 1 EIS for the High Speed Rail Empire Corridor Program discussed the use of railroad locomotives and passenger equipment that can be operated on the existing rail network in New York State and provide connections to the nationwide Amtrak network.

Commenter **Robledo, Joseph, VP Intermodal, Matson Logistics, Matson Logistics**

Comment O-75-1 As a company with significant operations in New York, Matson Logistics appreciates the state’s continued focus on economic development and pro-business efforts, but we are concerned that the proposed high speed rail corridor would negatively affect business operations. In an average month, Matson Logistics ships over 500 containers to/from ports and production and distribution points via the Empire Corridor. We, and many thousands of citizens, rely on the existing freight rail network for the efficient, reliable and economical transportation of goods.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Robledo, Joseph, VP Intermodal, Matson Logistics, Matson Logistics**

Comment O-75-2 We encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. We consider selection of the base alternative to be consistent with Governor Cuomo's nationally advertised business-friendly supporting new and expanded manufacturing.

Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Robledo, Joseph, VP Intermodal, Matson Logistics, Matson Logistics
Comment O-75-3	Conversely, the proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS alternatives. Alternatives 90A, 90B and 110 alternatives will add trackage to the Empire Corridor that will improve the operation of both freight and passenger trains. Alternative 90A would not provide the same level of transportation benefits as it would not add the same capacity as Alternatives 90B and 110 (which each provide more than 300 miles of additional trackage). Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.
Commenter	Damman, James, President, Mode Transportation LLC, Mode Transportation LLC
Comment O-76-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Damman, James, President, Mode Transportation LLC, Mode Transportation LLC
Comment O-76-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments of the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	King, Mark, Executive Director, Mohawk Hudson Land Conservancy, Mohawk Hudson Land Conservancy
Comment O-77-1	Reconnecting the City of Albany and the City of Rensselaer via the Livingston Avenue Bridge offers the potential for a significant economic and transportation enhancement for the Capital Region. Ideally, this would be part of a region wide system of bike and walking trails, something that is desperately needed in the Capital District.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The

Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter	DiMeo, Steven J., President, Mohawk Valley EDGE (Economic Development Growth Enterprises Corporation), Mohawk Valley EDGE (Economic Development Growth Enterprises Corporation)
Comment O-78-1	With the recent proposal of installing high speed rail, Mohawk Valley EDGE is calling on the State to make the right decision, and once again include Utica as an integral part of that plan.
Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125, a high-speed railroad on a new alignment, was designed to help cut the distance between Albany and Syracuse by 14 miles. One of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, express service would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	DiMeo, Steven J., President, Mohawk Valley EDGE (Economic Development Growth Enterprises Corporation), Mohawk Valley EDGE (Economic Development Growth Enterprises Corporation)
Comment O-78-2	Mohawk Valley EDGE respectfully submits its full support of the construction of high speed rail in New York State. EDGE also feels that any option that does not include Utica as a hub and stop along that proposed line is indefensible from both an economic and transportation planning perspective. Therefore, it is our opinion that any plans to construct high speed rail in New York State must include Utica as a hub and stop.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program and the importance of Utica on the route. Your comment has been considered in the selection of Alternative 90B as the Preferred Alternative for the reasons outlined above.
Commenter	Galioto, Frank, Murex, Murex
Comment O-79-1	...we are concerned that any changes to the rail corridor would negatively impact our logistics and our customers logistics.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Galioto, Frank, Murex, Murex
Comment O-79-2	We urge the state to maintain current freight corridor structure by selecting the base alternative.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative

	90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Szaloky, Joseph, Murphy-Brown LLC, Murphy-Brown LLC
Comment O-80-1	I'd like to urge you to consider our needs before compromising those qualities with the proposal to share lines between passenger and freight rail carriers.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Szaloky, Joseph, Murphy-Brown LLC, Murphy-Brown LLC
Comment O-80-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Wells, James, National Lime & Stone Company, National Lime & Stone Company
Comment O-81-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Wells, James, National Lime & Stone Company, National Lime & Stone Company
Comment O-81-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter	Weber, John V., Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-1	<p>...I'm in favor of pursuing Alternative 110 for the following reasons:</p> <ul style="list-style-type: none"> - Alternatives 90A & 90B support only a small maximum speed improvement over current 79 mph operation, and would not alleviate to a great degree interference with freight operations. - Alternative 125 cuts out Central New York, specifically Utica and Rome, from high speed service at a time when they are poised to become greater centers for new technology (nanotechnology, drone testing, functions at Griffiss Business & Technology Park).
Response	Your comment in support of the 110 Alternative has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but the Preferred Alternative (Alternative 90B) would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.
Commenter	Weber, John V., Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-2	what I would like to see is the addition of dedicated passenger track as in Alternative 110 with schedules and platform configurations at Rochester, Syracuse, Albany and Schenectady allowing easy and timely passenger transfer between high speed trains and lower-average-speed trains that would serve Utica, Rome and any other Central New York communities
Response	Thank you for your comments on the Tier 1 DEIS and on the scheduling of the future train service. The 90B and 110 Alternatives include the installation of additional main tracks to support passenger train operations on the Empire Corridor, but the Preferred Alternative (Alternative 90B) would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. The Service Development Plan component of the Tier 1 FEIS for the High Speed Rail Empire Corridor Program addresses scheduling, service patterns, and opportunities for connections at stations along the Empire Corridor.
Commenter	Lens, Harry, Vice President, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-3	<p>My name is Harry Lens and I'm the Vice President of the Utica Mohawk Valley Chapter of The National Railway Historical Society.</p> <p>The Utica and Mohawk Valley Chapter of the National Railway Historical Society is a non-profit historical society. It is committed to the preservation of railroad history and promotion of railroad transportation. The chapter endorses the DEIS 110 miles per hour alternative option. This option provides for increased and improved service for all corridor stations. Utica and the Mohawk Valley must be an integral part of the New York State railroad transportation plan. We do not approve options that bypass Utica in the Mohawk Valley. Our society is based in Utica.</p>
Response	Thank you for your comments in support of the 110 Alternative. Your comments on preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125, a high-speed railroad on a new alignment, was designed to help cut the distance between Albany and Syracuse by 14 miles. One of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany and would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its

	performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Lens, Harry, Vice President, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-4	We do have some concerns of the area surrounding Utica Station. As you know, Bagg's Square is a historic district. Many of these buildings are register eligible including The New York Central Tower 30 at the eastside of the platforms. This tower is very significant as there are very few still surviving in New York State. I believe the count is three, and that is one of the three survivors. There are many buildings in this area that are on the register including this station.
Response	Thank you for your comments on the importance of preserving historical sites along the Empire Corridor. In selecting routes and defining projects for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT have recognized the importance of preserving and supporting historical structures and facilities along the Empire Corridor. Section 4.15 of the Tier 1 FEIS addresses the potential for impacts on historic resources.
Commenter	Lens, Harry, Vice President, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-5	Also, it appears that the Adirondack Scenic Railway will be impacted by the construction of the station platforms. Although the Adirondack Scenic Railway is a separate non-profit society, we support their goals. Please minimize this disruption due to the operations of the new construction of the platforms.
Response	Thank you for your comments on the need to consider impacts to the Adirondack Scenic Railway at Utica. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations. Improvements in the Utica area considered accommodating continued service for the Adirondack Scenic Railway.
Commenter	Preston, Doug, President, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-6	I'm VERY DISAPPOINTED not to see an easel board concerning Utica!!! I heard an explanation, but I'm still disappointed.
Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, it would not serve Rome, Utica, Amsterdam and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.

Commenter	Preston, Doug, President, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-7	Some of the Alternatives tout raising the average speed from NY City to Niagara Falls to 63 mph. Impressive until one considers that about 60 years ago the New York Central ran the all-pullman “20th Century Limited” between New York (Grand Central Terminal) and Chicago (LaSalle Street Station – 960 miles, average speed 60 mph) in 15½ hours, pulled by first-generation diesels and, until 1953, sometimes by steam locomotives. I do acknowledge that the NYC was a 4-track railroad back then, with 2 dedicated passenger tracks (all on jointed rail BTW). Plus automatic train stop, which was later removed.
Response	Thank you for your comments on the Tier 1 DEIS, which were considered as part of the public review process. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Preston, Doug, President, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-8	Concerning the reconfiguration of the Utica station in the Alternative 90B/110 schematics, I trust the powers-that-be would replace the Adirondack Scenic RR tracks displaced by the new Amtrak tracks. And since the “new” passenger platforms are to be isolated from freights on Tracks 2 & 1, it would seem possible to build new umbrella sheds on the passenger platforms: for passenger comfort and safety in inclement weather, and as a partial restoration of the historic facilities that once existed (six island platforms, each with toaches on both sides)
Response	Thank you for your comment discussing the configuration of tracks at Utica. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. Individual projects, or groups of projects, will undergo a second evaluation (called Tier 2) to determine the best alternative for that project, or group of projects. Further evaluation of the facilities and track arrangements at Utica, would be part of the Tier 2 review for the improvement of the track arrangement at Utica.
Commenter	Preston, Doug, President, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-9	My comment just has to do with descriptions of the different communities, different stations along the way like volume one that were talked about Albany and Syracuse, and Syracuse, the big paragraph talked about it being the commercial and cultural hub of Central New York and the center of education, and I don't specifically remember if it was mentioned, Syracuse University, my alma mater as I say, but here in Utica where I live and I worked in this station in different ways, we see students go through here from to Utica College, Mohawk Valley Community College, Herkimer County Community College, State University College Utica/Rome, Hamilton College out in Clinton and even Colgate University

down in Hamilton, New York and the documentation is that you take shuttles, the shuttle vans from Colgate and Hamilton and, of course, obviously, the kids wear backpacks and jackets and all that. This station, the busiest travel day is the day before Thanksgiving or right around Thanksgiving and it's like students all here so we don't have Syracuse University, but when you start putting these other institutions together, student travel is a big part.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program and on the importance of Utica on the route. Your comment have been considered by the FRA and NYSDOT in their selection of Alternative 90B as the Preferred Alternative. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.

Commenter **Preston/Lens, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society**

Comment 0-82-10 The Utica and Mohawk Valley Chapter of the National Railway Historical Society is a non-profit, educational/historical society. It is committed to the preservation of railroad history and the promotion of railroad transportation. The Chapter endorses the DEIS 110 miles per hour Alternative Option. This option provides for increased and improved service for all corridor stations. Utica and the Mohawk valley must be an integral part of the New York State's Rail Transportation Plan.

Response Thank you for your comments in support of the 110 Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Moreover, Alternative 90B would have fewer environmental impacts than Alternative 110. Alternative 90B would have land use impacts in nine areas in six counties, compared to 53 areas in eight counties with Alternative 110.

Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which were considered by the FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B will provide improvements in service to currently served cities, such as Utica. One of the drawbacks of Alternative 125 is that express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady.

Commenter **Preston/Lens, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society**

Comment 0-82-11 Our society is based in Utica and has some concerns in the area immediately surrounding Utica Union Station. As you know, Bagg's Square area is a historical district. Many buildings are register eligible including the New York Central Railroad Tower 30 at the east side of the station platforms. This tower is historically significant because there are few remaining in New York State. Please try to keep Tower 30 intact with the future construction.

Response Thank you for your comments on the importance of preserving historical sites along the Empire Corridor. In selecting the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT considered the importance of preserving and supporting historical structures and facilities along the Empire Corridor. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125, as described above. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative

	110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Preston/Lens, Utica and Mohawk Valley Chapter of the National Railway Historical Society, Utica and Mohawk Valley Chapter of the National Railway Historical Society
Comment O-82-12	Also it appears the Adirondack Scenic Railroad will be impacted by the construction of new station platforms. Although the Adirondack Scenic Railroad is a separate non-profit society, we support their goals. Please minimize the disruption to their operations at Utica.
Response	Thank you for your comments on the need to consider impacts to the Adirondack Scenic Railway at Utica. The program of improvements under the Preferred Alternative (Alternative 90B) will be further developed in Tier 2. Improvements in the Utica area considered accommodating continued service for the Adirondack Scenic Railway. The Service Development Plan addresses maintaining and improving intermodal connection between intercity passenger trains on the Empire Corridor with other railroads including the Adirondack Scenic Railway.
Commenter	Hague, P.E., John Maxfield, New York Central System Historical Society, Inc. 4072, New York Central System Historical Society, Inc. 4072
Comment O-83-1	The 20CL compared not too unfavorably to your Alternatives 90A, 908 and 110. Its history of great performance over many decades, including links to the west coast, should be included as a model for the future in the final EIS.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations.
Commenter	Hague, P.E., John Maxfield, New York Central System Historical Society, Inc. 4072, New York Central System Historical Society, Inc. 4072
Comment O-83-2	Buffalo Central Terminal (opened 1929), located at the junction of the main line and the NY Central Belt Line, about halfway between the Depew and Exchange Street stations, should be considered for re-use as the Buffalo station.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, The focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily acceptable for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station over the Central Terminal location. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter	Martin, Richard J., Associate Executive Director, New York State Bar Association, New York State Bar Association
Comment O-84-1	I am writing in support of the so-called modified high speed rail proposal that is capable of speeds of 110 miles per hour.
Response	Your comment in support of the 110 Alternative has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Schiffer, William, Newhaven Distribution Services, Newhaven Distribution Services
Comment O-85-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Schiffer, William, Newhaven Distribution Services, Newhaven Distribution Services
Comment O-85-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Brown, Ike, President, NFI Intermodal, NFI Intermodal
Comment O-86-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce

travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Comment O-91-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote

economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Hatfield, Jane, Owensboro Riverport, Owensboro Riverport**

Comment 0-91-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.

Commenter **Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)**

Comment 0-92-1 Performance objectives must be expanded to ensure full consideration of all types of multi-modal connections, including bicycling and walking
A new objective should be added: "Foster multi-modal travel connections, including bicycling and walking."

Response Thank you for your comments on the Tier 1 DEIS. Transportation-related goals include: "increase travel choices by providing additional commuting and travel options for residents and workers." Although multi-modal connections and pedestrian access are considerations in station design, the broader focus for the program centers on intercity passenger rail service. The purpose of the Tier 1 EIS for the High Speed Rail Empire Corridor Program is to improve intercity passenger service in New York State through infrastructure investments and operational improvements, which will enhance the attractiveness of the service to existing and potential riders. Improvements in service include tangible and measurable gains in operational reliability and travel time reductions. The Tier 1 EIS focuses on selecting a Preferred Alternative for improving passenger rail service on the Empire Corridor.

Commenter **Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)**

Comment 0-92-2 the Tier 1 EIS must include a specific discussion of the following:

- Facilities for cyclists (bike racks, lockers, even showers) at stations
- Integration of station design with the surrounding street network to allow for safe access to the station by pedestrians and cyclists
- Accommodation of walking and bicycling at locations where the chosen alternative requires that bridges or other infrastructure be modified or replaced

Response Thank you for your comments on the issues to be addressed in the Tier 1 EIS. The tiered EIS process for the High Speed Rail Empire Corridor Program is a two-tier process, and currently Tier 1 selects a Preferred Alternative. Stations and supporting facilities can be either advanced as independent, separate projects (as many of the stations along the route have been recently upgraded or reconstructed) or can be addressed later in Tier 2, as individual projects are identified and reviewed. In the second stage of the process, the opportunities for integrating the needs accommodating bicycles and cyclists can be included in station projects.

Commenter **Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)**

Comment 0-92-3	We specifically request that a bicycle and pedestrian walkway be restored in conjunction with the Livingston Avenue Bridge replacement.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)
Comment 0-92-4	Transportation-related goals should recognize the importance of high speed rail to supporting tourism in New York State
Response	Thank you for your comments on the importance of rail in promoting tourism in New York State. The transportation-related goals of the High Speed Rail Empire Corridor Program, as outlined in Chapter 1, include “contribute to economic revitalization by accommodating forecasted growth in population and employment and corridor rail freight operations and by accommodating and attracting additional tourists.”
Commenter	Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)
Comment 0-92-5	The NYSDOT transportation-related program goals mentioned on page 1-12 and 6-1 should be revised as follows: <ul style="list-style-type: none"> • Increase travel choices and improve quality of life by providing additional commuting and travel options for residents, workers, AND TOURISTS • Contribute to economic revitalization by accommodating forecasted growth in population and employment and corridor rail freight operations and by ATTRACTING ADDITIONAL TOURISTS.
Response	Thank you for your comments on revising the document. As described above, the Tier 1 EIS has been revised to include the goal of accommodating tourists and tourism.
Commenter	Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)
Comment 0-92-6	Investment in new rolling stock must include cars to accommodate bicycles. Any rolling stock purchased to serve the High Speed Rail Empire Corridor Program must include passenger cars designed with racks to accommodate bicycles (the option we prefer) and/or baggage cars fitted with bicycle racks.
Response	Currently, bicycles can be accommodated on the Empire Corridor, but require separate ticketing. It is anticipated that equipment requirements would continue to incorporate bicycle access.
Commenter	Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)
Comment 0-92-7	Built Alternative Reviews must include impacts to the state's trail systems in addition to national, state, county, and municipal parks and recreation areas and federally and state-designated heritage and historic sites The text of Existing Conditions: Parks and Recreational Areas, page 4-262, does not include mention of any of the trail systems within the Empire Corridor with the exception of the

Erie Canalway Trail. While the document notes the Glenville Bike Trail (page 4-277), this is actually a section of the Erie Canal way Trail.

On page 4-261, the DEIS states that "Publicly owned recreation areas were defined to include publicly owned golf courses (but not "public" golf courses that are open to the public, but privately owned). There is no mention of publicly-owned trail systems. We recommend consultation with the MPOs and NYSDOT bicycle and pedestrian coordinators to ensure that, if applicable, New York's trails are recognized as recreational resources that should be included in any evaluation of the High Speed Rail Empire Corridor Program impacts.

Response The Tier 1 analysis of conceptual corridors identified potential impacts and focused on GIS-mapped parks and recreation areas. Due to the size and scale of the trails and bikeways, the detailed analysis of impacts to these recreational corridors would be evaluated as part of the Tier 2 analysis, when more detailed designs on component projects are advanced and developed.

Commenter **Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)**

Comment 0-92-8 Built Alternative Reviews must include impacts to historic as well as present Erie Canal alignments and planned as well as existing trail routes
In addressing potential impacts within the Area of Potential Effect for the five alternatives, consideration must be given to the broad corridor-level issue of impacts to planned as well as existing trail networks and to the historic as well as the present Erie Canal alignments. In evaluating alternative and potential effects, care must be taken to specifically ask local and state officials about planned or proposed trail projects before deciding there is no impact.

Response Thank you for your comments on the need for Built Alternative reviews in the future. The State Historic Preservation Office has been included in the Tier 1 reviews and will be consulted, as appropriate, in Tier 2 as part of constructability reviews for supporting projects. Tier 2 reviews will need to consider potential for impacts on recreational trails and projects.

Commenter **Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)**

Comment 0-92-9 Use of former track bed should be preserved for potential Erie Canalway Trail and other trail network development
In those locations where former track bed is not utilized, we request that it not be lost to non-transportation purposes but instead be preserved as future rail, trail, or rail with trail projects.

Response Thank you for comment on the possible future preservation of the right of way for rail trail or trail use. Currently, it is not anticipated that the existing right of way used by CSX Transportation for their freight train operations will be retired and available for other uses.

Commenter **Dropkin, Robin, Executive Director, Parks & Trails New York (PTNY), Parks & Trails New York (PTNY)**

Comment 0-92-10 Characterization of the New York State Canalway Trail System should be revised to reflect the Canalway Trail System's full extent
The paragraph should be revised to read as follows: "The 524- mile New York State Canalway Trail System is comprised of a network of four major recreational trails across upstate New York: the Erie Canalway Trail, Champlain Canalway Trail, Cayuga Seneca Canalway Trail, and Oswego Canalway Trail. Much of the trail system is located adjacent to the waterways of the New York State Canal System or follow remnants of the historic

original canals of the early 1800s that preceded today's working Canal System. Presently, more than 300 miles of the Canalway Trail System are open to the public: 277 miles of the Erie Canalway Trail, including the 36-mile Old Erie Canal State Park Trail in Central New York; six miles of the Cayuga-Seneca Canalway Trail; 17 miles of the Champlain Canalway Trail; and two miles of the Oswego Canalway Trail. Portions of this canal system are nationally or state-designated heritage areas, parks, and trails."

Response Thank you for your comments and suggestions to revise the Tier 1 EIS's characterization of the trail system, and the document's description of the New York State Canalway Trail System has been revised.

Commenter **Rinaldi, Philip L., Chief Executive Officer, Philadelphia Energy Solutions, Philadelphia Energy Solutions**

Comment I am concerned that the proposed high speed rail corridor would negatively affect business operations. We rely on the existing freight rail network for the efficient, reliable and economical transportation of goods.

0-93-1 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations. They also would impede the ability of the freight rail network to keep pace with and serve the needs of a growing upstate economy. I urge the state to maintain current freight service and the capacity for growth by selecting the base alternative. An optimized freight rail network will foster economic development, sustain jobs and help job growth as well as position existing and future New York businesses for success.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Steubing, Sandy, Spokesperson, People of Albany United for Safe Energy, People of Albany United for Safe Energy**

Comment I'm concerned that high speed passenger rail will be stalled due to the take over of oil by rail. I've also spoken to a few regular rail travelers who are shying away from taking the trains today b/c they don't wish to be near the oil trains.
0-94-1 The solution would be a massive switch to renewable sources of energy.

Response Thank you for your comments on operation of the high speed rail passenger trains and other train operating along the Empire Corridor. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, which should provide better separation of cargo trains from passenger rail. Equipment needs (including rolling stock) will be further addressed in advancing the Preferred Alternative in the Tier 2 assessments.

Commenter **Steubing, Sandy, Spokesperson, People of Albany United for Safe Energy, People of Albany United for Safe Energy**

Comment O-94-2 I'm a spokesperson for PAUSE, People of Albany United for Safe Energy. I'd like to double down on what Mr. Calsolaro and Mr. Daily and others have said about the Livingston Street Bridge, which I would love to be able to walk over in my lifetime.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Clark, Sharon, Perdue AgriBusiness, Perdue AgriBusiness

Comment O-95-1 I urge the state to consider the impact on freight rail operations when selecting an alternative.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Clark, Sharon, Perdue AgriBusiness, Perdue AgriBusiness

Comment O-95-2 In selecting an option, I encourage the state to maintain freight connectivity and the capacity to expand such service in the future by not commingling freight and high speed rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.

Commenter Spieckermann, Phil, POET Ethanol Products, POET Ethanol Products

Comment O-96-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.

Commenter Spieckermann, Phil, POET Ethanol Products, POET Ethanol Products

Comment O-96-2 I urge the state to consider the impact on freight rail operations when selecting an alternative.

Response	Thanks you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Spieckermann, Phil, POET Ethanol Products, POET Ethanol Products
Comment O-96-3	In selecting an option, I encourage the state to maintain freight connectivity and the capacity to expand such service in the future by not commingling freight and high speed rail operations.
Response	Thank you for your comments on the Tier 1 DEIS. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor and will improve the operation of both freight and passenger trains.
Commenter	Von Dohlen, Gerard, Port Newark Refrigerated Warehouse, Port Newark Refrigerated Warehouse
Comment O-97-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. As outlined above, the additional trackage provided by the Preferred Alternative, Alternative 90B, would improve both passenger and freight rail capacity and operations.
Commenter	Von Dohlen, Gerard, Port Newark Refrigerated Warehouse, Port Newark Refrigerated Warehouse
Comment O-97-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Hayes, Ken, PSL North America, PSL North America
Comment O-98-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles

	of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Hayes, Ken, PSL North America, PSL North America
Comment O-98-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, the additional trackage provided by this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Jordan, Jacob, Executive Director, Queen City Rail Trails, Queen City Rail Trails
Comment O-99-1	Is it possible, while building the 90A/B and 110 improvements, to lay the literal foundation for 125 along the existing corridor?
Response	Thank you for your comments on the possible future ability to build the 125 Alternative from the infrastructure for 90B or 110 Alternatives. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). A substantial drawback of Alternative 125 is that it would take the longest time to construct and would be the costliest alternative. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125, as described above.
Commenter	Jordan, Jacob, Executive Director, Queen City Rail Trails, Queen City Rail Trails
Comment O-99-2	I am Jacob Jordan, Executive Director of Queen City Rail Trails. I mean I definitely think that whatever investment happens for dedicated separate right of ways must be considered on their ability to be expanded upon for true European/Japanese type high speed monorail. It doesn't have to be the same but, you know, if we're already running the overhead lines and make these trains go 125 miles an hour you should be able to expand that in the future.
Response	Thank you for your comments on the possibility of using technology that requires a dedicated right or way. Early in the alternatives identification process, higher speed (very high speed) options were reviewed, but were not selected as they would have a greater impact on the environment and would require substantially greater financial resources. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT focused on railroad technology discussed in the Tier 1 EIS.
Commenter	Jordan, Jacob, Executive Director, Queen City Rail Trails, Queen City Rail Trails
Comment O-99-3	The existing plan that we talked about talks about expanding the Buffalo-Depew station which has -- those of you around here know is a brick shack out in the suburbs. I mean there is nothing wrong with that, but it definitely could be an investment that we're seeing in the City of Buffalo and Western New York and especially in downtown, medical campus,

Main Street, and waterfront corridor that an expansion to main Street to be a larger capacity station or an all together new downtown station in the City of Buffalo is of importance to any project in the Western New York area.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the need for improvements to station(s) in Buffalo. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Esposito, Paul, Railex, Railex**

Comment O-100-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comment on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Esposito, Paul, Railex, Railex**

Comment O-100-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.

Commenter **Fesen, Michael, President, Railroads of New York (RONY), Railroads of New York (RONY)**

Comment O-101-1 I wish to express our support for the base alternative

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. Alternative 90B will provide approximately 370 miles of additional trackage to

	better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-1	Reconnect Rochester strongly supports the Empire Corridor High Speed Rail Project design presented in the DEIS, in particular “Alternative 110.”
Response	Your comment in support of the 110 Alternative has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-2	We ask for the following changes and clarifications: -Retain Central Avenue in the design of the Rochester Intermodal Transportation Center’s Phase II.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the Rochester Station Project. The rail station at Rochester has been replaced by a new intermodal passenger station, information on the public outreach for this project can be found at: https://www.dot.ny.gov/rochesterintermodalcenter/outreach
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-3	We ask for the following changes and clarifications: -Improve transit, pedestrian and bicycle connections to the Rochester Intermodal Transportation Center.
Response	The improvements for the Empire Corridor have been designed to facilitate passenger connections with stations along the route, including the Rochester Station. The intermodal Rochester Station will promote economic development by connecting people to the downtown Rochester and destinations along the Empire Corridor. The station reconstruction project replaced the existing station with a fully ADA compliant Intermodal Transportation Center that meets the needs of the traveling public entering and exiting the Empire Corridor at Rochester.
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-4	We ask for the following changes and clarifications: -Re-acquire the former Mainline ROW through Fairport to accommodate the addition of a dedicated passenger track.
Response	Thank you for your analysis of the track arrangements in the Tier 1 DEIS for the High Speed Rail Empire Corridor program. . The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. This additional trackage includes additional third track to be installed between Schenectady and Buffalo-Depew, including through Fairport. The arrangements of tracks at Fairport were altered several years ago to support the elimination of a grade crossing on State Highway 250 (Main Street) in the community. As

	projects are considered in the Tier 2 assessments for the program, the impact of railroad operations on grade crossing can be reviewed with a focus on promoting safety.
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-5	We ask for the following changes and clarifications: -Accommodate new stations in Lyons (or Newark) and Batavia.
Response	Thank you for your comments on adding more stations to the Empire Corridor routes as part of the public review of the Tier 1 DEIS. The Tier 1 EIS outlines the improvements needed at existing stations for each of the alternatives; the inclusion of additional stations along the Empire Corridor would have to be part of future studies for expanding service.
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-6	We ask for the following changes and clarifications: -Accommodate the introduction of regional service along the Niagara Falls to Albany corridor.
Response	Thank you for your comments on the Tier 1 DEIS and the suggestion for the introduction of regional type service along the Empire Corridor. In the Preferred Alternative, regional trains will continue to operate and service all stations between Albany and Buffalo/Niagara Falls, but at a greater frequency (doubling the service currently provided). Suggestions and comments for improvements to the service have been considered in the development of the Service Development Plan component of the Tier 1 FEIS.
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-7	I'm from Reconnect Rochester, which is a local organization that supports and approves transportation, including transit. And we do very strongly support improvement to the Empire Corridor, as well as the new Rochester Intermodal Station. However, personally, as an individual I'd like to say: In an ideal world, I would like to see the 125 Option. So I would hate to see that we insist upon a 125-mile-an-hour Option and wind up really getting more decades of nothing significant happening in the corridor.
Response	Your comment in support of the 125 Alternative has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). A substantial drawback of Alternative 125 is that it would take the longest time to construct and would be the costliest alternative.
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester
Comment O-102-8	...we very strongly support the efforts for a new Amtrak and Trailway/Greyhound station here in Rochester. It would be a vast improvement for all passengers.
Response	Thank you for your comments on the Rochester Station project. The rail station at Rochester has been replaced by a new intermodal passenger station. Further information on the new Intermodal Station at Rochester can be found at: https://www.dot.ny.gov/rochesterintermodalcenter
Commenter	Feller, DeWain, Vice President, Reconnect Rochester, Reconnect Rochester

Comment O-102-9 We do have major concerns about the current concept of the second phase which would sever Central Avenue between Clinton and Joseph. And that would create a huge barrier, a superblock to the 1960s and '70s terminology, between Cumberland and Ward Street where you have no option for getting between the two streets, between Clinton and Joseph. I think we could very easily modify that phase to keep Central Avenue in place.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the Rochester Station project. The rail station at Rochester has been replaced by a new intermodal passenger station. The new station maintains access and continuity along Central Avenue.

Further information on the new Intermodal Station at Rochester can be found at:

<https://www.dot.ny.gov/rochesterintermodalcenter>

Commenter Pearson, Ben, Republic Services, Republic Services

Comment O-103-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail.

Commenter Pearson, Ben, Republic Services, Republic Services

Comment O-103-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter	Anzevino, Jeffrey, Director of Land Use Advocacy, Scenic Hudson, Inc., Scenic Hudson, Inc.
Comment O-107-1	we are primarily concerned that the implementation of an improved high speed rail program between New York and Albany does not further limit the public's access to the river

Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. The improvements proposed are largely restricted to the railroad right-of-way and should not impede public access to the river beyond what currently exists. Reviews of public access in the Hudson Valley can be evaluated, as appropriate, in the Tier 2 assessments for individual projects that are part of the program.
Commenter	Anzevino, Jeffrey, Director of Land Use Advocacy, Scenic Hudson, Inc., Scenic Hudson, Inc.
Comment O-107-2	The "Purpose and Need" section of the DEIS should be amended to include a statement that affirms that public access to the Hudson River's shore will not be diminished, and where possible, the project will seek out new opportunities and partnerships to provide additional access.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, service frequencies, and passenger amenities. Access to the Hudson River for recreation could be part of the analysis in Tier 2, as appropriate, for individual projects in this segment of the route.
Commenter	Anzevino, Jeffrey, Director of Land Use Advocacy, Scenic Hudson, Inc., Scenic Hudson, Inc.
Comment O-107-3	Since the High Speed Rail program will require federal and state permits and use federal funding, a consistency determination must be made with respect to New York State's Coastal Management Plan.
Response	Thank you for your comments. Acquisition of federal and state permits and approvals would be performed as part of the Tier 2 assessments for individual projects that are part of the program.
Commenter	Anzevino, Jeffrey, Director of Land Use Advocacy, Scenic Hudson, Inc., Scenic Hudson, Inc.
Comment O-107-4	We urge the New York State Department of Transportation (DOT) to include in the program financial and planning incentives to support municipal efforts to plan for and implement Transit-oriented development (TOD) in areas around existing or future train stations.
Response	Thank you for your comments on improving transit oriented development, and the opportunities for Transit Oriented Development could be part of future station projects along the Empire Corridor. The improvements at new or existing stations constructed by NYSDOT in Niagara Falls, Buffalo, Rochester, Syracuse, and Albany were implemented as separate projects, with the goal of complementing the neighborhood and fostering adjacent development.
Commenter	Anzevino, Jeffrey, Director of Land Use Advocacy, Scenic Hudson, Inc., Scenic Hudson, Inc.
Comment O-107-5	We urge DOT to plan for future sea level rise and flooding patterns and to use the planning for the High Speed Rail Project as an opportunity to make the entire corridor more resilient so that public investment in this infrastructure is protected over the long run.
Response	Thank you for your comments on flooding and resiliency of the system as part of the public review. In the aftermath of Hurricanes Irene and Sandy, the railroads along the Empire Corridor; Metro North Railroad, Amtrak, and CSX Transportation have all taken proactive measures to protect their operations along the Hudson and Mohawk Rivers and continue to

	make improvements to protect trackage and signal systems from high water and flooding. In the Tier 2 process, potential mitigation strategies and future analysis that could be performed is discussed in Chapter 4 – Sections 4.20.5 and 4.11.6.
Commenter	Edic, Steven, Plant Manager, Scepter New York, Scepter New York
Comment O-108-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.
Commenter	Edic, Steven, Plant Manager, Scepter New York, Scepter New York
Comment O-108-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Rhode, Steve, Vice President - Rail, Schneider National Carriers, Inc., Schneider National Carriers, Inc.
Comment O-109-1	We urge that the Department of Transportation give considerable weight to the effect that the various passenger rail options under review may have on freight movement.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Rhode, Steve, Vice President - Rail, Schneider National Carriers, Inc., Schneider National Carriers, Inc.
Comment O-109-2	We therefore urge that the Department of Transportation to reject any passenger rail service proposal which does not adequately protect existing freight rail service.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.

Commenter	Pagliuca, David, Schnitzer, Schnitzer
Comment O-110-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Pagliuca, David, Schnitzer, Schnitzer
Comment O-110-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Shea, Harry, Shea Lumber, Shea Lumber
Comment O-111-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Shea, Harry, Shea Lumber, Shea Lumber
Comment O-111-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Hodgkiss, Charles, Rail Transport Consultant, Shelly Materials, Shelly Materials

Comment O-112-1	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, potentially constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Grandstaff, Jeff, ShipCarsNow, ShipCarsNow
Comment O-113-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.

Comment O-113-3	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Dilling, Travis, ShipCarsNow, ShipCarsNow

Comment O-113-4	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Hamilton, Christa, ShipCarsNow, ShipCarsNow
Comment O-113-5	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Hamilton, Christa, ShipCarsNow, ShipCarsNow
Comment O-113-6	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Barbari, Mark, Smart Warehousing, Smart Warehousing
Comment O-114-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Barbari, Mark, Smart Warehousing, Smart Warehousing
Comment O-114-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A,

90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.

Commenter **Manno, James, Sonwil Distribution Center, Sonwil Distribution Center**

Comment O-115-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Manno, James, Sonwil Distribution Center, Sonwil Distribution Center**

Comment O-115-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.

Commenter **Shields, Jamison, SP Fiber Technologies, SP Fiber Technologies**

Comment O-116-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Shields, Jamison, SP Fiber Technologies, SP Fiber Technologies**

Comment O-116-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Byrd, Bruce, SSAB, SSAB
Comment O-118-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Byrd, Bruce, SSAB, SSAB
Comment O-118-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, the additional trackage provided by this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Cummins, John, Suburban Propane, LP, Suburban Propane, LP

Comment O-119-1	We urge the state of New York to consider the impact on freight rail operations when selecting an alternative.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Baldock, Samantha, SUNY Fellow on Women & Public Policy, Center State Corporation for Economic Opportunity (CEG), Center State Corporation for Economic Opportunity (CEG)
Comment O-120-1	Each of the alternatives, under consideration, to increase train speed are accompanied by operating deficits and expensive price tags, yet they do project an increase in overall passengers. Thus, we must support an option that takes our system into the 21st century and beyond. Balancing the cost of increased speed with a reduction in travel time should be paramount in the decision making process.
Response	Thank you for your comments on the alternatives in the Tier 1 DEIS, and your support of the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. The subsidy for the Preferred Alternative (Alternative 90B) would be \$13 per rider, which would be lower than both Alternative 125's subsidy per rider of \$14 and the Base Alternative's subsidy per rider of \$17 per rider. Alternative 90B's costs would also be less than that for Alternative 110. Its capital cost would be \$720 million (or 12%) less than that for Alternative 110, and annual operating and maintenance costs would be \$2 million lower than for Alternative 110. A discussion of the comparison of the alternatives is discussed Chapter 6 of the Tier 1 EIS.
Commenter	Baldock, Samantha, SUNY Fellow on Women & Public Policy, Center State Corporation for Economic Opportunity (CEG), Center State Corporation for Economic Opportunity (CEG)
Comment O-120-2	CEG supports the goal of the EIS to study and select a HSR service level that advances operations and infrastructure, so that train frequency and travel times improve.
Response	Thank you for your support of the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Because Alternative 90B is situated largely within the existing right-of-way, it can be constructed in substantially less time than Alternative 125 and will begin to confer benefits

within 2 to 5 years after start of construction. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations.

Commenter Sarin, Peter, Synagro, Synagro

Comment O-121-1 I am concerned that the proposed high speed rail corridor would negatively affect our cost of operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours.

Commenter Sarin, Peter, Synagro, Synagro

Comment O-121-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Bobitt, James, Tate & Lyle, Tate & Lyle

Comment O-122-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Bobitt, James, Tate & Lyle, Tate & Lyle

Comment O-122-2 I urge the state to maintain current freight service and the capacity for growth by selecting the base alternative.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.

Commenter	Tighe, John, Tighe Logistics Group, Tighe Logistics Group
Comment O-123-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Tighe, John, Tighe Logistics Group, Tighe Logistics Group
Comment O-123-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined above, this alternative would improve both passenger and freight rail capacity and operations.
Commenter	Bard, James, United States Steel Corporation, United States Steel Corporation
Comment O-124-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Bard, James, United States Steel Corporation, United States Steel Corporation
Comment O-124-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Seligman, Joel, President, University of Rochester, University of Rochester

Comment O-125-1	Thank you for allowing me the opportunity to submit testimony on behalf of the University of Rochester in support of passenger rail improvements to New York's Empire Corridor. If New York wants a 21st century innovation-based economy, we need a 21st century transportation system to accommodate it and compete with the rest of the world. I strongly support the proposed alternatives that improvement in service will increase ridership and support and help accommodate increased demand associated with planned and future growth of the University.
Response	Thank you for your support of the High Speed Rail Empire Corridor Program. Important goals of the project are to improve reliability, reduce trip times and increase the frequency of trains of the program. Your comment has been reviewed by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Thomas, Ph.D., Alexander R., Director, Utica College Center for Small City and Rural Studies, Utica College Center for Small City and Rural Studies
Comment O-126-1	We see potential for High Speed Rail to move these time distances further upstate, drawing Albany within daily commuting distance (at 125 Miles per hour) and Utica within the "arts" zone.
Response	Thank you for your comments on the Tier 1 DEIS in support of the program. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, express service would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Thomas, Ph.D., Alexander R., Director, Utica College Center for Small City and Rural Studies, Utica College Center for Small City and Rural Studies
Comment O-126-2	We also believe that New York City would benefit from increased access to upstate residential, labor, and retail markets as the city has added nearly one million residents since 1990. In fact, such cities as Tokyo have turned to High Speed Rail as a mechanism for increasing the city's "local" market, and we believe that New York will need to do the same in order to remain competitive against other global cities.
Response	Thank you for your comments on the benefits that can be achieved by the High Speed Rail Empire Corridor Program. An important goal of the program is to support economic growth along the Empire Corridor, as you discuss in your comment.
Commenter	Thomas, Ph.D., Alexander R., Director, Utica College Center for Small City and Rural Studies, Utica College Center for Small City and Rural Studies
Comment O-126-3	We would certainly be in favor of 110 miles per hour train, although we also believe that a connection of 125 miles per hour would maximize this potential in eastern New York State.
Response	Your comment discussing the 110 and 125 Alternatives have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the

alternatives considered. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Because Alternative 90B is situated largely within the existing right-of-way, it can be constructed in substantially less time than Alternative 125 and will begin to confer benefits within 2 to 5 years after start of construction. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, the Preferred Alternative will maintain/increase service to all existing stations.

Commenter	Thomas, Ph.D., Alexander R., Director, Utica College Center for Small City and Rural Studies, Utica College Center for Small City and Rural Studies
Comment O-126-4	Alternatively, a "hybrid" model of 125 mile-per-hour connection between New York and Utica and 110 mile-per-hour to the west would also be quite effective.
Response	Thank you for your comments on improving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125, a high-speed railroad on a new alignment, was designed to help cut the distance between Albany and Syracuse by 14 milese. One of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, it would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternatives 125 and 110, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative will increase service to Utica.
Commenter	Applegate, Ken, Senior Vice-President/Transportation, Valero, Valero
Comment O-127-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Applegate, Ken, Senior Vice-President/Transportation, Valero, Valero
Comment O-127-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, and we are concerned about the potential for significant negative impacts to freight rail operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of

	additional trackage that will expand capacity for both passenger and freight rail on the Empire Corridor.
Commenter	Cadieux, Shirley, Warehouse Mgr., Valleypac Industries, Inc., Valleypac Industries, Inc.
Comment O-128-1	Valleypac was perturbed when we got the news that the Federal Railroad Administration and the New York State Department of Transportation were contemplating commingling Freight and Passenger traffic. Our wish list would be that CSXT continues to service us promptly, efficiently and safely as they have done for us for the past 30 years. We are truly concerned of how these changes could affect our future business.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Important goals for the program include improving travel times on the Empire Corridor, increasing the frequency of service and enhancing passenger amenities. Other goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increasing the attractiveness of the region for business. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Hammer, Virginia, President, Pine Hills Neighborhood Association, Pine Hills Neighborhood Association
Comment O-129-1	The likely replacement of this bridge provides an opportunity to reestablish a bicycle and pedestrian connection that is both safe and cost effective.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Hammer, Virginia, President, Pine Hills Neighborhood Association, Pine Hills Neighborhood Association
Comment O-129-2	The Empire Corridor Draft Environmental Impact Statement does not acknowledge the walkway, support for the facility, or Federal Rail's own report outlining best practices for developing rail with trail facilities.
Response	Thank you for your comments on the Livingston Avenue Bridge. The Tier 1 FEIS (Section 7.7) notes the public support for the pedestrian walkway and bicycle path on the bridge in the comments received on the Tier 1 DEIS.
Commenter	Vaugh, Nick, Albany-Colonie Regional Chamber of Commerce, Albany-Colonie Regional Chamber of Commerce
Comment O-130-1	Good evening, everyone. I am Nick Vaugh with the Albany Colonie Regional Chamber. We represent over 2,200 members throughout the Capital Region that employ over 110,000 individuals. While we haven't taken an official position as far as the individual proposed plans, important points that we would like to have considered is first, no disruption to freight.

Response	Thank you for your comments in support for the High Speed Rail Empire Corridor Program. NYSDOT and the FRA are committed to the improvement of passenger rail service and maintaining freight operations along the Empire Corridor. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Vaugh, Nick, Albany-Colonie Regional Chamber of Commerce, Albany-Colonie Regional Chamber of Commerce
Comment O-130-2	The other is the affordability for passengers. The frequency is critical, especially when we head west, and the reliability, knowing the train will show up and knowing when and where, it's very critical.
Response	Thank you for your comments in support for the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, would double the service frequency along Empire Corridor West for the service leg that includes Utica and Rome. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered. Although Alternative 110 has the lowest subsidy, the subsidy for the Preferred Alternative (Alternative 90B) would be \$13 per rider, which would be lower than both Alternative 125's subsidy per rider of \$14 and the Base Alternative's subsidy per rider of \$17 per rider. Alternative 90B's costs would also be less than that for Alternative 110. Its capital cost would be 12% less than that for Alternative 110, and annual operating and maintenance costs would be \$2 million lower than for Alternative 110.
Commenter	Calsolaro, Dominick, Reclaim Our Waterfront (ROW), Reclaim Our Waterfront (ROW)
Comment O-131-1	I'm here representing a group they call ROW, R-O-W, Reclaim Our Waterfront. We are a group of people, business owners, sports clubs, bicycling, running, paddling, walking and local elected officials. We agree that improvements for high speed rail in the Empire Corridor is a much needed necessity as we move deeper into the 21st Century. However, ROW has not yet taken a stand on which option to consider the best option for improving high speed rail service from New York City to Niagara Falls.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B, the Preferred Alternative, would increase ridership by 1 million over the Base Alternative.
Commenter	Calsolaro, Dominick, Reclaim Our Waterfront (ROW), Reclaim Our Waterfront (ROW)
Comment O-131-2	What we are taking a strong stand on, though, is the inclusion in whatever option is finally decided upon, that the reconstruction of the Livingston Avenue Bridge include a pedestrian and bike access way across the Hudson River. The Livingston Avenue Bridge was originally constructed with a walkway that made it possible for pedestrians and bicyclists to safely cross the Hudson River between Albany and Rensselaer. The walkway was open for decades, going back to the late 1800s and early 1900s, until it was closed about 20 or so years ago because of needed repairs. To include the walkway as part of the reconstruction of the Livingston Avenue Bridge is a very inexpensive item when looking at the projected cost of the numerous options for improving high speed rail in the Empire Corridor. The walkway is a necessity, not an amenity.

Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Calsolaro, Dominick, Reclaim Our Waterfront (ROW), Reclaim Our Waterfront (ROW)
Comment O-131-3	Local governments on both sides of the Hudson have made better access to the river a priority. The City of Albany has not one, but two planning groups working on river access issues as a way to encourage economic development in these downtown neighborhoods. Rensselaer is in the process of extending their riverside pedestrian and bike trails north, bringing the trail closer to the Troy waterfront. The inclusion of a walkway connecting Albany and Rensselaer will go a long way to regionalizing economic development in the Capital Region. The walkway would connect the ever-increasing rail-trails on the Albany side of the Hudson, to the expanding trail on the Rensselaer/Troy side of the Hudson.
Response	Thank you for your comments on the inclusion of a walk and bikeway on the Livingston Avenue Bridge. The Tier 1 FEIS (Section 7.7) notes the public support for the pedestrian walkway and bicycle path on the bridge in the comments received on the Tier 1 DEIS.
Commenter	Newman, William, Reclaim Our Waterfront (ROW), Reclaim Our Waterfront (ROW)
Comment O-131-4	I'd like to see a restoration of the pedestrian walkway on the rail crossing over the Hudson River at the Livingston Avenue railroad bridge. This crossing is very important for the economic revitalization that is going on both in the City of Albany and the City of Rensselaer. My group does not have a preference in terms of which alternative, it's more of a reestablishing that pedestrian connection with the replacement bridge that will be going forward.
Response	Thank you for your comments in support of improving the Livingston Avenue Bridge, which is part of the program evaluated in the Tier 1 FEIS. The Tier 1 FEIS notes the public support for the pedestrian walkway and bicycle path on the bridge.
Commenter	Vamos, Ivan, New York Bicycling Coalition, New York Bicycling Coalition
Comment O-132-1	My name is Ivan Vamos AICP, retired Deputy Commissioner of NYS Parks, Recreation and Historic Preservation (OPRHP), Vice-Chair of NY State's Trails Advisory Committee, member of CDTC (Capital Dist. MPO) Bicycling Pedestrian Advisory Committee and Board Member Emeritus NY State Bicycling Coalition. My involvement with the Empire State Corridor, freight lines along the same and parallel routes includes about 50 years of experience, occasionally necessitating negotiations with the railroads regarding bridges and other right-of-way issues and I continue to be interested as a regular train passenger. However there are issues that the DEIS fails to address, probably making the document deficient or incomplete. I will limit my comments to a few selected, very relevant bridge and access issues that are not addressed in the DEIS at all. NY State is much benefited by long and scenic rail lines, especially those located along the Hudson and Mohawk Rivers and Lake Champlain.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Comments from the public, relating to the accessibility of recreational areas along the Empire Corridor,

have been considered by FRA and NYSDOT in the selection process for a Preferred Alternative for the High Speed Rail Empire Corridor Program.

Commenter **Vamos, Ivan, New York Bicycling Coalition, New York Bicycling Coalition**

Comment
O-132-2

A combination of aging bridges, both impromptu and signalized at grade crossings and guarded, closed access points (that do experience problems with trespass) at one time offered rail line crossings, frequently developed and managed by the railroad company owning the line. These rail line bridge crossings were not addressed through the years and are not mentioned in the DEIS. Elevated walkways crossing the lower Hudson route have long been closed, and offer third-world examples of this issue, with stairways left dangling in the air. What were at one time formerly managed crossings have been deemed “closed” because of safety concerns, while they remain very much in use with trespassers dumping trash, setting fires and causing other problems.

A very few selected “closed” bridges and crossings that were formerly a railroad responsibility have been reluctantly addressed by public and private entities that were stuck solving the safety issues involved to continue the use of their riverfront properties. Three examples along the tidal Hudson come to mind since these locations had to be solved by OPRHP, with some help from other agencies, and legislative initiative. The Parks agency replaced “closed”, the derelict bridge to Little Stony Point, the at grade crossing providing access to the 9 mile long Schodack-Castleton peninsula, and Stony Point Bridge, located in Putnam, Rensselaer / Columbia and Rockland Counties respectively. If these bridge issues had not been addressed, important state recourses would have been closed to the public, including parks, historic and marine sites, a museum, proposed natural beaches and great hiking, fishing and riding opportunities. Worse than the loss of closed facilities and parks, the public didn’t stop accessing these sites just because the railroad posted a “closed” sign on the crossing, so the closed crossing presented a policing and safety problem without any benefit. The railroad simply ignored their responsibilities and perhaps hoped someone else would offer a solution.

It is understood that this is a large, far scattered and complex problem requiring considerable work to identify what’s to be done, along the Empire Corridor. However at least the issue should have been conceptually and procedurally addressed in the DEIS. An approach to analyzing and solving these crossing problems, identifying where increased speeds and rail service improvements will exacerbate the safety issues, and perhaps proposing standards that are to be followed, should have been added to the DEIS.

Response

Thank you for expressing your comments and concerns. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. Alternatives. Safety Considerations are discussed in Section 2.6 of the Tier 1 FEIS. Access across the rail right-of-way could be addressed in Tier 2 assessments for individual projects and any planning would need to consider existing access and easement agreements, with the railroad companies owning the right-of-way.

Commenter **Vamos, Ivan, New York Bicycling Coalition, New York Bicycling Coalition**

Comment
O-132-3

There are other bridges where a strategic crossing has been a part of the railroad bridge and the abandonment of walkway facilities by the rail owners was based on no other consideration than saving maintenance funds. The abandonment of immediate concern at this time is the pedestrian walkway along the 112 year old Livingston Ave Bridge (LAB) connecting the Cities of Albany and Rensselaer. This bridge must be rebuilt or rehabilitated very soon for the Empire State Corridor system to function. I was delighted to be included in a meeting with DOT, CDTC (the MPO), Modjeski and Masters (the bridge consultant hired by NYS DOT), Cities of Albany and Rensselaer and Albany County representatives on Sept. 30, 2010 to discuss the LAB. Regarding the walkway, we noted that there was never a formal “abandonment” such as a State or ICC proceeding (if required circa 1970), it was simply closed without notice! We discussed one inadequate option; the mile distant, and

sub-standard, out of ADA compliance, crossing along the Dunn Memorial Bridge, serving another community. Inconveniently high, the route is generally thought to be unattractive and even unsafe. Two or more viable, attractive pedestrian crossings served these Cities from the Civil War into the 1970s. It was clear that no other option existed than to rebuild or rehab the walkway on the LAB at that location.

We discussed if multi-purpose trails existed along active rail rights of way; I alerted the attendees at the 3/30/'10 meeting to several reports cataloging these activities and offering model solutions. I agreed to provide a report on the subject, and mailed a five page synopsis of my findings to all at the meeting on Oct. 25, 2010.

A few calls followed regarding details about access from existing trails on both shorelines up to the LAB (about 24'), but no response, decision, acknowledgement or project status report was received in three or more years.

The Cities, Counties, Federal and State legislators passed resolutions and took positions strongly supporting the reconstruction of the LAB.

If however the existing (but closed without review) walkway along the LAB is not evaluated as a viable option to be undertaken with the LAB, then I assume the DEIS, the project, and perhaps the entire Empire Corridor,

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Vamos, Ivan, New York Bicycling Coalition, New York Bicycling Coalition

Comment O-132-4 I am adding a relatively simple request to to my testimony (perhaps already part of the project but not shown on the renderings); the new and renovated rail stations that are included in the Base Alternative, as well as some of the stations that were not included, should all have convenient bike racks, some perhaps under cover, installed as part of the project.

Response Thank you for your continued interest in the High Speed Rail Empire Corridor Program. Comments from the public, relating to the accessibility for bicycles and pedestrians, have been considered by FRA and NYSDOT in the selection process for a Preferred Alternative. A number of station improvement projects have been completed as separate independent projects along the Empire Corridor, including reconstruction at the Buffalo-Exchange Street Station. The projects included in the Preferred Alternative will undergo a second evaluation (Tier 2), and bicycle and pedestrian accommodations can be further evaluated at that time for any station projects included, as appropriate.

Commenter Vamos, Ivan, New York Bicycling Coalition, New York Bicycling Coalition

Comment O-132-5 I am from New York State Bicycle Coalition and I am also a member of several advisory groups, Trails, as well as CDTCs Bike Path Task Force. I'm pleased to hear that the EIS includes some at-grade crossing improvements, but more are needed.

It really should be considered, as part of an overall program, how to deal with the major sites that are cut off by the railroads, and that could be also along the freight lines elsewhere, where there are equal problems. That is a long-term program. I realize it can't be done at the same time as this EIS, but it's something that EIS should mention.

Response Thank you for your comments on the grade-crossings along the Empire Corridor. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including

service reliability, service frequency, and train speeds. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection process for a Preferred Alternative.

Commenter **Vamos, Ivan, New York Bicycling Coalition, New York Bicycling Coalition**

Comment O-132-6 There were proposals to connect up to that site and the railroads chose on their own, without any proceedings, without any hearings, without any ICC approval, if that's needed, to abandon that trail as part of their bridge and part of their service, without any public participation whatsoever. Now, I realize this was many years ago, but it remains out there. It should be replaced as the bridge is being replaced So we hope for this to be processed soon so we can know whether there is a proposal in place that has that as an option that could be selected, rather than getting stuck with an emergency project that leaves out this critical element and perhaps opens up the project to challenge because it has been not dealt with.

Response Thank you for your comments concerning the consideration of bicycles and pedestrians in the High Speed Rail evaluation process. Comments from the public, relating to the accessibility for bicycles and pedestrians, have been considered by FRA and NYSDOT in the selection process for a Preferred Alternative. Any projects resulting from the Preferred Alternative will undergo a second evaluation (Tier 2) and bicycle and pedestrian accommodations can be further evaluated at that time, as appropriate.

Commenter **Botzman, Harvey, New York Bicycling Coalition/Rochester Cycling Alliance, New York Bicycling Coalition/Rochester Cycling Alliance**

Comment O-132-7 I also am here representing the Rochester Cycling Alliance and the New York Bicycling Coalition, we all, those two organizations as well as myself. And I also belong to and I'm on the Board of Canal New York Business Alliance. Let me first make a short comment that the Canal Corporation is encouraging transport of all commodities and rail cars by barges. The problem is, there aren't enough barges.

Response Thank you for your comments. Public comments, discussing passenger rail operations as part of the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection process for the Preferred Alternative.

Commenter **Botzman, Harvey, New York Bicycling Coalition/Rochester Cycling Alliance, New York Bicycling Coalition/Rochester Cycling Alliance**

Comment O-132-8 But I'm here, basically, to support the 125-miles-per-hour trains. And one of the main reasons is the tourism potential of getting people from New York City to Upstate to Niagara Falls, as well as to the places in between: Albany, Syracuse, Rochester, Buffalo.

Response Views and comments from the public relating to support of Alternative 125 have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, express service would not serve Rome, Utica, Amsterdam and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to existing stations between Albany and Buffalo/Niagara Falls.

Commenter **Botzman, Harvey, New York Bicycling Coalition/Rochester Cycling Alliance, New York Bicycling Coalition/Rochester Cycling Alliance**

Comment O-132-9 And we must make sure that on each of the stations, and in fact this station, we have submitted comments as the Rochester Cycling Alliance and the New York Bicycling Coalition and myself, to make sure there are storage places and places which are secure for bicycles for people who want to get on a train and go down or go up, either way, and travel up by train.

Response Thank you for your continued interest in the High Speed Rail Empire Corridor Program. The Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. Individual projects, or groups of projects, will undergo a second evaluation (Tier 2) to determine the best alternative for that project, or group of projects including looking at options for pedestrian/bicycle accommodations, as appropriate.

Commenter Parikh, Rohan, Albany Bicycle Coalition, Albany Bicycle Coalition

Comment O-133-1 My name Rohan Parikh. I am a resident of Red Hook, New York, in the Hudson Valley, as well as Albany, and I am involved with Albany Bicycle Coalition, a local group here, also the Livingston Avenue Bridge Coalition, What I will emphasize is that we are looking here at the EIS to mitigate environmental impacts, impacts on parks and recreation, facilities, impacts on historic resources. And one historic resource that spans New York State from Albany to Buffalo is the Erie Canalway Trail, and this trail follows very closely along with the rail corridor. And one opportunity to mitigate any environmental impact, would be to increase connectivity with this corridor, and that would be allowing bicycles on trains.

Response Thank you for your comments concerning the consideration of bicycles and pedestrians in the High Speed Rail evaluation process. Comments from the public, relating to the accessibility for bicycles and pedestrians have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Any projects resulting from the preferred alternative will undergo a second evaluation (Tier 2) and bicycle and pedestrian accommodations can be further evaluated at that time, as appropriate.

Commenter	Ackerman, Lauren
Comment I-1-1	I'm all for faster train service upstate, but why is there never a move to reintroduce rail service from NYC, through PA and up to Binghamton where you have a major university and then moving on to Niagara etc.
Response	Thank you for your comment on the HSR Empire Corridor Program. The program considers improvement alternatives for the Empire Corridor. The route mentioned (Pocono Corridor) is approximately 80 miles south of the Empire Corridor and does not service the same cities as the Empire Corridor.
Commenter	Acquisto, Michelle
Comment I-2-1	If there was a way to protect homes, the environment and historical land and sites, I am in favor of Alternative Plan 125.
Response	NYSDOT's goal is to avoid and minimize adverse impacts to the greatest extent possible. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. This detailed analysis, as outlined in the Tier 1 FEIS, examined the best method for avoiding and minimizing impact to features like homes, the environment and historical land sites.
Commenter	Acton, Brion
Comment I-3-1	I do not support any of the proposed options for one reason, our current road and bridge infrastructure need repair/improvement far more than the addition of a high speed rail line.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Adams, Rev. Bud
Comment I-4-1	I wholeheartedly support the implementation of safe high-speed rail service across New York State. The benefits are many: jobs for construction and for long-term maintenance, local economics near train stations, substantially reduced travel times, and fewer cars on the thruway resulting in a reduction in emissions are but a few.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would shorten the trip from New York City to Niagara Falls by 1½ hours and would substantially reduce highway emissions over the Base Alternative.
Commenter	Zizzi, Annamarie
Comment I-5-1	We have been waiting for high speed rail for years when it was promised. I have stopped taking the train because its so slow and so have others. We would love to take the train again on high speed rail.
Response	Your view and comments have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would shorten the trip from

	New York City to Niagara Falls by 1½ hours and would result in the best overall on-time performance for Amtrak service in 2035.
Commenter	Akkoul, Sharon
Comment I-6-1	I am very much in favor of a high-speed rail option between the 2 cities. The current rail options are not truly an alternative to flying. Often, I drive to Albany in order to be able to take the train to NYC. Reducing the total travel time to 3 or 4 hours between the 2 cities will make it easier for business and leisure travelers, and aid in improving the upstate economy.
Response	Comments from the public have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would shorten the trip from New York City to Niagara Falls by 1½ hours and would also double the frequency of service to destinations along Empire Corridor West.
Commenter	Aldridge, Zachary Steiner
Comment I-7-1	the prospect of a high speed railway linking the state is a definitive "yes." Environmental concerns are minimal (especially considering the reduced emissions from a populace taking trains instead of driving cars), economic opportunities are inevitable and the image it would provide of our state would be exemplary. All of Europe is connected by rails, why can't we be?
Response	Thank you for your comment in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The net annual operational benefits for the Preferred Alternative would be roughly equivalent to eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year.
Commenter	Alfes, Keith
Comment I-8-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee,

tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

I-9-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Allentoff, Norman

Comment
I-10-1 With the shrinking resources available in Upstate NY, I believe that pie-in-the-sky proposals such as high speed light rail hoped for by our esteemed Louise Slaughter should be abandoned for the time being.

What Upstate needs is upgrading of the CSX tracks and the small additions to them needed to eliminate the passenger delays now required for the first priority passage of the CSX freights, resulting in elimination of the frequent delays in passenger schedules which now preclude reliable, on time service.

Response Thank you for your comment on the HSR Empire Corridor Program. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. Alternative 125 would create a dedicated, 2-track passenger right-of-way over much of the Empire Corridor. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Allin, Christopher

Comment
I-11-1 An improved rail network including upgrades and high speed trains and service, creating an efficient network connecting downstate to upstate and then to Western New York.

Response	Your comments in support of the High Speed Empire Corridor Program have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would shorten the trip from New York City to Niagara Falls by 1½ hours and would also double the frequency of service to destinations along Empire Corridor West.
Commenter	Almer, Carl
Comment I-12-1	I just wish to express my strong support for a high-speed component to the Empire Corridor. High-Speed passenger rail, especially with a dedicated line, would have a great impact on western New York (not to mention the Hudson Valley). It would provide connections between the three large cities in the area, creating the synergy between them that is often talked about but actually rarely seen.
Response	Comments from the public have been considered in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and would also double the frequency of service to destinations along Empire Corridor West.
Commenter	Ambrosino, Arthur Michael, Great Sacandaga Lake Deepening Project, Great Sacandaga Lake Deepening Project
Comment I-13-1	This project is long overdue, I commend you for moving it forward. I am the president of the Great Sacandaga Lake Deepening Project. This freshwater Impoundment project will be paid for by the mineral wealth of the GSL. The GSL will contain between 200 and 600 Billion EXTRA gallons of freshwater that can be used for downstate, in an emergency, depending on how deep we deepen the lake. It would be exceedingly smart to bury the piping infrastructure underneath the railroad right-of-way....
Response	Thank you for your comment supporting for the High Speed Rail (HSR) Empire Corridor Program. Our program is focused on improving intercity rail passenger service between New York City and Niagara Falls. Your proposal to share the right of way for multiple purposes would require further study, since the railroad companies own the property.
Commenter	Amicucci, Barbara
Comment I-14-1	Alternative 90B is my first choice, with Alternative 110 as my second. I really want Utica to remain a stop either way.
Response	Your comments supporting Alternatives 90B/110 and preserving intercity rail passenger service for the City of Utica have been considered in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Alternative 90B will provide improvements in service to currently served cities, such as Utica. One of the drawbacks of Alternative 125 is that express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady.
Commenter	Andrle, Christopher
Comment I-15-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Anonymous**

Comment I-16-1 The 125 option will not benefit the trains to Toronto and Chicago; the 90B and 110 options will, as an added effect, benefit these trains.

Response You are correct in recognizing that the equipment in the 125 Alternative may not be compatible with trains currently operated to Toronto and Chicago. It is an accurate assumption that these trains could benefit from operating on the 90B and 110 Alternatives. Your comment has been considered in the selection of Alternative 90B as the Preferred Alternative by the FRA and NYSDOT.

Commenter **Anonymous, D.S. Ray Middle School, D.S. Ray Middle School**

Comment I-17-1 No, I wouldn't support this idea of High Speed Rail because why waste money on this and not donate this money to cancer research.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the review of the Tier 1 EIS.

Commenter **Anonymous, D.S. Ray Middle School, D.S. Ray Middle School**

Comment I-17-2 Even though it would be great to get to places faster, this is also polluting the air.

Response Comments from the public are an important part of the review process for the Tier 1 EIS for the High Speed Rail Empire Corridor Program. Section 4.19 of the Tier 1 EIS describes the air quality analysis performed, which indicates that no significant adverse air quality impacts are expected. Moreover, with the diversion of travelers to rail, the net annual operational benefits for the Preferred Alternative would be roughly equivalent to

	eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year.
Commenter	Anonymous
Comment I-18-1	support any enhancements to the Empire Corridor - have Them be incremental – don't do a project and say "now we're done"
Response	Incremental improvements will occur during the course of constructing the different components of the Preferred Alternative. Alternative 90B would begin conferring travel benefits within 2-5 years of the start of construction. The implementation of service initiatives and completion of the different project components are outlined in the Service Development Plan.
Commenter	Anonymous
Comment I-18-2	Do promotions!! I am 58 years old and am awe That many of my friends have never ridden a train.
Response	Thank you for comments on public outreach and education. Your support has been considered by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Anonymous
Comment I-18-3	Please, please focus on being on time. Also, frequency of trains is important for flexibility in travel plans. MPH is an easy reference for comparisons, by frequency & punctuality will lead To a more sustainable level of ridership.
Response	Key goals of the New York State High Speed Rail program will be to improve reliability, on-time performance, and provide additional trains to the communities along the Empire Corridor in western New York, which will address the concerns you outlined in your comment. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and would result in the best overall on-time performance for Amtrak service in 2035. Alternative 90B, the Preferred Alternative, would also double the frequency of service to destinations along Empire Corridor West.
Commenter	Anonymous
Comment I-19-1	Bring is on! But without the government!
Response	Your comment in support of the High Speed Rail Empire Corridor Program has been considered in the review process for the Tier 1 EIS. Your suggestion is acknowledged relating to support of the project from the public sector.
Commenter	Anonymous
Comment I-20-1	We need a statewide intercity travel ridership survey. Without this, ridership for high speed options is underestimated, due to omitting people who drive from (e.g.) Watertown to catch trains at Syracuse.
Response	Thank you for your comment, on the need to accurately forecast the demand for ridership for intercity rail service along the Empire Corridor. A detailed ridership analysis was conducted for each of the alternatives discussed in the Tier 1 Environmental Impact Statement (EIS) for the High Speed Rail Empire Corridor Program. Analyzing the demand for ridership has been an important consideration in selecting the Preferred Alternative.
Commenter	Anonymous

Comment I-21-1	I support High Speed Rail 100%! Let's get this country up to speed w/ Europe. The sooner the better!
Response	Thank you for comments on the High Speed Rail Empire Corridor Program, your support has been considered by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Anonymous
Comment I-22-1	At the present time I think the funds you are planning to use on a high speed railroad could be put to better use. Those funds should be used to repair roads and bridges that the average NY State resident has to use daily to go to work or other daily living needs. When these thing are improved then think about the high speed rail systems.The average person in NY will never use the high speed rail system but they do use the roads and bridges each day.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Anonymous
Comment I-23-1	I-81 tear it down and leave it down.
Response	Thank you for your comment on I-81, but it is outside the scope of the High Speed Rail Empire Corridor Program. You can also visit the I-81 webpage on the NYSDOT website, and express your opinion.
Commenter	Anonymous
Comment I-24-1	Exclusive passenger tracks are needed to avoid freight-induced delays.
Response	Your comment discussing the need for additional tracks along the Empire Corridor has been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Anonymous
Comment I-25-1	At alternative 110 (or 125), it becomes faster and more reliable to drive from Ithaca to Syracuse and take the train from there to NYC than it is to take the direct bus from Ithaca to NYC.
Response	Thank you for your comment on how faster rail service in Alternatives 110 (or 125) will encourage ridership on the Empire Corridor. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125 and would also shorten the trip from New York City to Niagara Falls by 1½ hours. This alternative would result in the best overall on-time performance for Amtrak service in 2035 and would also double the frequency of service between Albany and Buffalo.
Commenter	Anonymous

Comment I-26-1	The trestle bridges over Howland Wildlife Refuge (if I remember correctly) are one of the slowest points on the route (10 miles per hour perhaps?). Any option needs to replace these “slow spots” with full-speed track. ASAP.
Response	Your comment points out the operating constraints the rail bridge over the Seneca River near the Northern Montezuma Wildlife Management Area(which includes Howland Island) places on train operations on the route. The speed restriction for this bridge is currently 40 mph. Under the Preferred Alternative, the speed restriction will be improved. Future operating speeds will be established during final design.
Commenter	Anthony, Sam, Erdman Anthony, Erdman Anthony
Comment I-27-1	Average 1 way flight = \$100 x 600 = \$60,000 On 1 Monday If price train at air rate and get to NYC in 2 hours, 1 way revenue = \$60,000, 2-way = \$120,000 Annual Rev = 120,000 * 50 weeks = \$6 million At the public info meeting the HNTB staff person told me my numbers were not real and that the Niagara to Albany run could not be justified
Response	Your comments on the revenue possibilities for rail service and competitiveness with air service have been considered by NYSDOT and the FRA in the selection of Alternative 90B as the Preferred Alternative. A detailed assessment of market demand and projected ridership was performed for each of the alternatives evaluated in the Tier 1 EIS for the High Speed Rail Empire Corridor Program. Ridership and revenue performance were important considerations in selecting the Preferred Alternative.
Commenter	Applebaum, Richard
Comment I-28-1	The rail system in Upstate NY is very much hampered by the 2 track system. In most cases, we can not rely on rail travel due to possible delays and missing connections. I see high speed rail as a solution to this problem. If high speed rail existed, it would be a wonderful alternative to flying and driving, which does not presently exist.
Response	Thank you for your comment discussing challenges in using the existing rail service, and the opportunities for success for this program. Your comment has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Appleton, Ted
Comment I-29-1	The plan to put high speed rail in New York has failure written all over it. The estimated cost of high speed rail along empire corridor as of now is upwards of \$14.7 billion. Even with inflated numbers of estimated ridership, New Yorkers are not going to be willing to give up their vehicles to get around cities like Buffalo, Syracuse, Rochester, and Albany, which lack the public transportation of NYC. There are nearly endless reasons that no plan for high speed rail has been put into action.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS. The cost of Alternative 90B, the Preferred Alternative, is substantially less (almost 1/3 less) than the most costly alternative (Alternative 125), which was a major consideration in

its selection. The subsidy for the Preferred Alternative (Alternative 90B) would be \$13 per rider, which would be lower than both Alternative 125's subsidy per rider of \$14 and the Base Alternative's subsidy per rider of \$17 per rider.

Commenter Aselin, Don

Comment I-30-1 Unless trains go 150 - 210 mph it may not be worth the investment ? Bullet train from London to Paris is a good example of the good fast train !

Response Thank you for your comment on the need for trains to operate at higher speeds than the different Build Alternatives evaluated in the Tier 1 EIS for the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered, but were not advanced, in part because they would bypass all but four of the existing stations along Empire Corridor West. Moreover, it was also determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate than the Preferred Alternative. Comments from the public have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Ashton, Timothy W.

Comment I-31-1 The connection to NYC is obviously important for Buffalo, but at the other end, the connection to Toronto is similarly significant and can be missed.

Response Thank you for your comment on opportunities on the western end of the Empire Corridor to connect Buffalo and Toronto. Currently, the High Speed Rail Empire Corridor Program is focused on improvements between New York City and Niagara Falls. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto. Suggestions and recommendations by the public, for improvements to the service, have been considered in the development of the Service Development Plan. Further improvements or enhancements to the service can be studied in the future, and operating timetables can be further developed as part of Tier 2 assessments.

Commenter Ashton, Timothy W.

Comment I-31-2 When there is good high speed service from Toronto to NYC, everyone will benefit and the value of the investment in New York State will be greatly increased.

Response Thank you for your comment on how everyone will benefit from improvements to the route, when trip times are improved between New York City and Toronto. In the Preferred Alternative (Alternative 90B), the train on the Empire Corridor to Toronto will be able to utilize the improved infrastructure and will have a reduction in trip times, which would achieve the goals you outline in your comment.

Commenter Askeland, Richard A.

Comment I-32-1 After attending the public hearing in Syracuse on 5 March 2014, feel that alternative 110 offers the best plan for improving the NY State rail passenger program. We need dedicated track for passenger service---and we don't want to short-change populations that live close to the Empire Corridor West, by eliminating stops.

Response Thank you for your comment in support of 110 Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and

	passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.
Commenter	Askeland, Richard A.
Comment I-32-2	<p>It must be improved. In light of climate change - we need to reduce our carbon imprint. We must promote train travel to reduce out imprint; offer alternatives to car and plane travel and stimulate our N.Y. State economy by providing economic linkages between communities.</p> <p>I think Alternative 110 offers a good start. It doesn't provide the kind of speed that Japan has attained with the "Bullet" train that I rode in the 1960's - but we can improve in increments.</p>
Response	Thank you for your comment discussing the need to use rail service to reduce our carbon footprint, along with improving the connectivity and economy of the communities along the Empire Corridor. Your comment has been considered by the FRA and NYSDOT in the selection of Alternative 90B (over Alternative 110) as the Preferred Alternative, for the reasons outlined above.
Commenter	Askin, Tim
Comment I-33-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Backer, Kevin

Comment I-34-1	Please use the Central Terminal in Buffalo for the any and all upcoming rail projects in WNY. This should include the statewide highspeed train, metro rail expansion and any other project. Improvements to the Depew or Exchange street terminals arr foolish with the Central Terminal here in our market.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the stations in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of improvements for the purpose of making decisions on corridor-level service. The focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Baco, Meagan
Comment I-35-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Banks, Ariane
Comment	The Buffalo Central Terminal would be a perfect stop for the high speed rail.

I-36-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Banning, Patricia

Comment I-37-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-35-1.

Commenter Barnaba, Alyssa, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-38-1 When high speed rail trains come to New York, I'm hoping they will be fast, reliable, efficient and environment safe. I'm really hope that the high speed rail trains will be fast, because I really think if it was fast, it could help people cut down on being late to places. It could help people how live in Baldwinsville get to Albany and back in one day rather than two. It could help people who live over an hour away from their work.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route. Comments from the public have been considered in the selection by the FRA and NYSDOT of the Preferred Alternative, which will improve reliability, travel times, and frequency of train service.

Commenter Barrick, Joseph

Comment I-39-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-35-1.

Commenter Barringer, Brian

Comment I-40-1 I've been a close observer of high speed rail use in Europe and parts of Asia for some time. I see tremendous benefits for its implementation in NYS.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program. Public comments have been considered in selection by the FRA and NYSDOT of the Preferred Alternative.

Commenter Barry, C.J.

Comment I-41-1 I vote for the 125 MPH option. \$14.71 billion is an investment in NY state. Rail travel is ecologically-friendly, safe, and progressive.

Response Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. Public participation in the program was considered in the selection process for the Preferred Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Because it is situated largely within the existing right-of-way, it can be constructed in substantially less time than Alternative 125 and will begin to confer benefits within 2 to 5 years after start of construction. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations.

Commenter Barry, Cindy

Comment I-42-1 I welcome ANY improvement to the current rail system and schedule between Central NY and NYC. I don't even care what option you go with. Anything is better than what we have now.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered in the selection of the Preferred Alternative.

Commenter Bartlett, Russ

Comment I-43-1 I am in favor of the 14.7 billion dollar option.

Response Thank you for your comment supporting the 125 Alternative. Public comment has been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Moreover, Alternative 90B would have fewer environmental impacts than Alternative 125 and would also be less

costly. Alternative 125 was dismissed, based on greater impacts to 2,000 to 3,000 acres and higher costs (more than double the costs for the Preferred Alternative). One of the drawbacks of Alternative 125 is that express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady. Alternative 125 would also take the longest time to incur travel benefits due to the time required to acquire and construct the right-of-way.

Commenter Bates, Ann

Comment I-44-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Bauch, Kevin James

Comment I-45-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Beal, Daniel

Comment I-46-1 I fully support the improvement of high speed rail in NYS and specifically I support the highest speed possible while still stopping at Utica. In the proposal 110 mph was the highest, but I would definitely support exploring a way to have even greater speeds while still stopping at Utica. Union station in Utica is also a station for the Adirondack Scenic Railroad.

Response Your comments about preserving and offering intercity rail passenger service for the City of Utica has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, the 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.

Commenter Beal, Daniel

Comment I-46-2 Another missed opportunity could be in Buffalo. The Depew station parking lot is always overcrowded. A new station (replacing Exchange Street) should be added at Buffalo Central Terminal. What a great site to prepare for expansion, with its size and historical value. With Buffalo looking at growing its metro rail, a local line to downtown and the Airport could be run through Buffalo Central Terminal.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Improvement to the passenger rail facilities in the Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. The focus was on utilizing existing stations along the Empire Corridor including the stations at Buffalo-Depew and Buffalo-Exchange Street. Buffalo Central Terminal was not included in the analysis of the Build Alternatives at this time. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station over the Central Terminal location. Some of the primary reasons

for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Bellanti, Jason

Comment I-47-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Bennett, Shirley B.

Comment I-48-1 we need a train station in the Finger Lakes Region to support tourism and increase the number of visitors to our wine country.

Response Thank you for your suggestion for the adding of a station along the Empire Corridor north of the Finger Lakes area. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. The focus was on utilizing existing stations along the Empire Corridor. Trip time reductions for the Build Alternatives as discussed in the Tier 1 EIS were based on the trains operating non-stop between Syracuse and Rochester, without any intermediate stations in the Finger Lakes area. The inclusion of additional stations along the Empire Corridor could be part of future studies for expanding service.

Commenter Benzing, James

Comment I-49-1 I strongly support any substantial upgrades to the corridor.

Response Thank you for uour comments supporting the High Speed Rail Empire Corridor Program. Public comments have been considered in the by the FRA and NYSDOT of the Preferred Alternative.

Commenter Bersohn, Daniel

Comment I-50-1 High speed rail between Hudson and NYC and Buffalo? Yes, please! Please do it with electric trains so we can reduce carbon as the grid gets less carbon intense.

Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program. Your suggestion to use electric power for operating the trains would be achieved by Alternative 125, which was dismissed from further consideration in the Tier 1 FEIS. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. A primary goal for the program is to increase patronage of rail passenger service, by attracting passengers from other modes of transportation (short distance air travel and automobiles), that have carbon footprints greater than rail passenger service. Achieving a diversion to rail and increases in rail passenger usage will reduce the carbon footprint of the other forms of transportation.
Commenter	Bersohn, Daniel
Comment I-50-2	Tilting trains might improve speeds on existing track without significant modification to existing track.
Response	Consideration of the types of locomotives and rolling stock will be part of the second evaluation (Tier 2) to further advance the design for that project, or group of projects, that will meet the goals of the program. Use of tilt trains on the route may require further study. The clearances of the tilt train wheel and axle assemblies may not meet the recommended allowances to operate on lines equipped with third rail that the Empire Corridor trains must use on both Metro North Railroad and in Pennsylvania Station, New York.
Commenter	Bick, Henry J.
Comment I-51-1	I believe the state could truly benefit from these upgrades to our rail system.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Comments from the public, including support for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Bick, Michelle
Comment I-52-1	We felt that the state, and certainly local economies could benefit from these projects as presented.
Response	Comments from the public supporting of the High Speed Rail Empire Corridor Program have been considered in selecting the Preferred Alternative. Promoting economic vitality for the communities along the route is part of the purpose for the program, along with improving trip times, frequencies of service and passenger amenities.
Commenter	Birnbaum, Jesse
Comment I-53-1	I am strongly in favor of the High Speed Rail Empire Corridor Project.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program. Public comments have been considered in the selection by the FRA and NYSDOT of the Preferred Alternative.
Commenter	Bishop, Timothy
Comment I-54-1	A high speed passenger train from Buffalo to NYC is not needed, period.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Bissaillon, Gary
Comment I-55-1	I am very interested in the proposed high speed rail corridor from Buffalo to Albany and to NYC. I am an occasional Amtrak rider and would love to see great improvements made in the high speed line with dedicated track for passenger traffic. I know I would increase the frequency of my trips with improved speed and on-time trains. I am in favor of the 125 mph option.
Response	Thank you for your comment supporting the 125 Alternative. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance.
Commenter	Blarr, Patricia
Comment I-56-1	I fully support a high speed rail from NY City to Buffalo. A few years ago my family took Amtrak from Depew to NYC. Trip was very beautiful, comfortable and ease of travel with baggage/luggage 99% better than air travel. Negative part of trip- Extremely frustrated with length of time train on rails. Travel by Amtrak took 10 hrs vs car-5-6 hrs. High speed rail would create same benefits in 21st century that Erie Canal produced in 19th century. Not enough space to list the numerous benefits. In Europe passenger trains are priority. That would be advantageous to America, as well. Time for fed govt to concentrate on passenger trains rather than air transp. Compared to air transp, passenger trains much more environmentally friendly and uses less fossil fuel.
Response	Comments from the public supporting the High Speed Rail Empire Corridor Program have been considered in selecting the Preferred Alternative. Major goals for the program include a reduction in trip times, along with improving the operating speeds of the passenger trains, frequencies of service, and passenger amenities.
Commenter	Blasdell, Serena
Comment I-57-1	I would love to see the central terminal in Buffalo as a stop for a high speed rail train.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Bleier, Kevin
Comment I-58-1	I am a proponent for the following options in order of preference: 90B Alt 11 (because it has lower on-time performance) 90A

Response	Thank you for your support of Alternative 90B and your analysis of the alternatives. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Boatwright, Stephon J.
Comment I-59-1	With all this said, after intensely reviewing the options, I am in strong favor of alternative 110, or, despite its hefty price tag, option 125. This type of project would greatly alter my decision making process while looking for employment; upstate NY would become significantly more appealing.
Response	Your support of the the 110 and 125 Alternatives has been considered in the selection of Alternative 90B as the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Boatwright, Stephon J.
Comment I-59-2	Lastly, I would like to express my opposition to any project that does not add more trains from the Western Corridor to New York City;
Response	Your comment has been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would double the frequency of service between Albany and Buffalo.
Commenter	Bogdan, Daniel, Consultant, United Consulting Network at High Speed Rail Systems, Consultant, United Consulting Network at High Speed Rail Systems
Comment I-60-1	High speed rail in New York should start with Alternative 125 as it offers the best solution to meeting the high speed rail performance objectives as listed in the your website (and brochure).
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance.
Commenter	Bogdan, Daniel, Consultant, United Consulting Network at High Speed Rail Systems, Consultant, United Consulting Network at High Speed Rail Systems
Comment I-60-2	The only modification that I would make with Alternative 125 would be to add a station in the Utica area (south of Utica)
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley

	between Syracuse and Albany. Therefore, the 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Bogdan, Daniel, Consultant, United Consulting Network at High Speed Rail Systems, Consultant, United Consulting Network at High Speed Rail Systems
Comment I-60-3	Has NYSDOT explored using the Barge Canal right of way and /or the abandoned West Shore Railroad right of way as part of the right of way for Alternative 125?
Response	Your comment on the Tier 1 DEIS has been considered in the selection of the Preferred Alternative (Alternative 90B), which follows portions of the canal system. As discussed in the prior responses, Alternative 125 was dismissed from further consideration. The Erie Canal (Barge Canal) may not be suitable in many areas for supporting the addition of a high speed railroad as it passes through park areas at many of the locks and uses part of the Mohawk River and other waterways. The West Shore Railroad right of way, in many locations, has been redeveloped for other uses and is still utilized by CSXT in the Rochester area. It does not offer access to Albany-Rensselaer Station or a direct connection to Manhattan.
Commenter	Bogdan, Daniel, Consultant, United Consulting Network at High Speed Rail Systems, Consultant, United Consulting Network at High Speed Rail Systems
Comment I-60-4	Another option for the other alternatives would be electrifying the existing right of way.
Response	Thank you for suggestion for electrifying the trackage along the route. The Tier 1 EIS discusses the types of energy used for trains in Section 4.20. One of the alternatives dismissed from further consideration in the Tier 1 FEIS, Alternative 125, would provide for electric trains between Albany and Buffalo. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance.
Commenter	Bogdan, Daniel, Consultant, United Consulting Network at High Speed Rail Systems, Consultant, United Consulting Network at High Speed Rail Systems
Comment I-60-5	I'm a consultant at United Consulting Network at High Speed Rail Systems. I endorse alternative 125, with the caveat that there is a stop in the Utica area, New Hartford area. One or two or three or four trains can stop in this area, New Hartford, and Clinton. I don't think it would affect the schedule that much, perhaps all the stops in Utica or certain percentage, so an alternative 125 is really the start to High Speed Rail. It's got a dedicated Railway, it would eliminate a lot of confusion, perhaps with traffic on CSX, if there's a derailment on CSX which it is going to happen, it always does.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, the 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Bogdan, Daniel, Consultant, United Consulting Network at High Speed Rail Systems, Consultant, United Consulting Network at High Speed Rail Systems
Comment I-60-6	I just have one more request that perhaps the comment period could be extended beyond the March 24th date. That would be, I think, greatly appreciated. I know it was out in

January, but now that you're having -- making these presentations, I think it's waking up a lot of people and they may want to make comments. I would suggest extending the deadlines for the written comments.

Response NYSDOT was able to extend the comment period, to April 30th, 2014, as other commenters shared your interest in lengthening the span of time to submit comments. Thank you for your comments on the High Speed Rail Empire Corridor Program.

Commenter **Boland, Bernice**

Comment Please use the central terminal in Buffalo N. Y. It will be the perfect speed rail destination.
I-61-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Boltz, Michael**

Comment This "high speed" rail is a terrible idea that nobody wants.
I-62-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.

Commenter **Boomer-Jenks, Solon**

Comment I would like to voice my support in favor of bicycle and pedestrian access over the replacement for the Livingston Avenue railroad bridge. I believe having such access is important as there is currently only one other nonmotor vehicle river crossing within the City of Albany, with the nearest one outside the city several miles to the north. The only current crossing in Albany is inconvenient for pedestrians and bicycles as it requires climbing 60 feet and the path is quite narrow with bicyclists expected to walk their bikes the entire length.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter **Boulden, Kimberly A., Education and Employment Specialist, Hispanos Unidos de Buffalo, Education and Employment Specialist, Hispanos Unidos de Buffalo**

Comment I-64-1	With the expansion of the Buffalo Medical Campus and Cuomo's proposed "Buffalo Billion" coming to our city for job and urban development, it is crucial that our city be connected with other major centers. If we want to see Buffalo become a center for business, education, and growth, we need to improve the accessibility of our city.
Response	Thank you for your comment in support of the High Speed Rail Empire Corridor Program and the need to improve intercity rail passenger service in Buffalo and Western New York. Key goals of the program are to improving the operating speeds of the passenger trains, frequencies of service, and passenger amenities, which will all help to better serve the City of Buffalo. Your comment has been considered in the selection of Alternative 90B as the Preferred Alternative, which would double the frequency of service between Albany and Buffalo.
Commenter	Boulden, Kimberly A., Education and Employment Specialist, Hispanos Unidos de Buffalo, Education and Employment Specialist, Hispanos Unidos de Buffalo
Comment I-64-2	A proposed high speed train that tops out at speeds of 125 mph is "planning for the past." Like many abandoned projects in Buffalo, 125 mph train would have been a fantastic asset to our city twenty years ago. In 2014, the plan is dated and does not seem to be effectively utilizing the world's advancing technology and the region's vast resources in an efficient manner. If the plan can not offer a less than 6 hour train ride to New York City, I am afraid we will commit ourselves to project that will be outdated before it's ever completed.
Response	Your comments on the Tier 1 EIS have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Several alternatives were reviewed that would have introduced higher speed trains than Alternative 125, but it was determined that these alternatives would have a greater impact on the environment and higher costs. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered, but were not advanced, in part because they would bypass all but four of the existing stations along Empire Corridor West.
Commenter	Boyer, Greg
Comment I-65-1	I am strongly in favor of the 125 option.
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Bradfuhrer, Edward
Comment I-66-1	A 6 hour train ride to from Buffalo to NYC would make people more likely to use the train over Airplanes since the time costs could be similar when parking, security and waiting on the tarmac are added into flying times. Any alternative with a ride of longer than approximately 6 hours would not have a similar effect. Once again, I support implementing Alternatives 110 or 125. I would prefer Alternative 125.
Response	Thank you for your support of the High Speed Rail Empire Corridor Program and 110 and 125 alternatives. Your comments on the Tier 1 EIS have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. We recognize your suggestion for higher speed trains, and in the early stages of the process several alternatives were reviewed that would have introduced higher speed trains than Alternative 125, but it was determined that these alternatives would have a greater impact on the environment and higher costs. The Preferred Alternative, Alternative 90B, was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and

its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Brady, Joseph

Comment I-67-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Braun, Patrick

Comment I-68-1 This opens an opportunity to establish right of ways for high speed connections, as well as renewable power generation and transmission. Electric based rail may appear to add cost to the infrastructure at first glance, but provides a sustainable and mutible alternative to diesel fuel.

Response Your comments on the use of electricity for train movements have been considered in the Tier 1 DEIS review process. The Tier 1 EIS discusses the types of energy used for trains in Section 4.20. One of the alternatives in the Tier 1 EIS, Alternative 125, provides for electric trains between Albany and Buffalo. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. A primary goal for the program is to increase patronage of rail passenger service, by attracting passengers from other modes of transportation (short distance air travel and automobiles), that have carbon footprints greater than rail passenger service. Achieving a diversion to rail and increases in rail passenger usage will reduce the carbon footprint of the other forms of transportation.

Commenter	Braun, Patrick
Comment I-68-2	The Buffalo Central Terminal is not only centrally located to provide multimodal transportation, it can serve as a cornerstone for renewable energy production to serve the high speed rail.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-67-1.
Commenter	Breisch, Keith C.
Comment I-69-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-67-1.
Commenter	Brodnick, John
Comment I-70-1	Alternative 125 is the only proposed plan that meets the definition and service advantages of high speed rail. Alternative 125 is the only plan that will attract enough travelers to change driving habits and provide viability to the high speed rail system.
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). One of the drawbacks of Alternative 125 is that express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady. A substantial drawback of Alternative 125 is that it would take the longest time to construct and would be the costliest alternative.
Commenter	Brodnick, John

Comment I-70-2	Alternative 125 clearly meets all of the plan objectives, however the exhibit indicates that the regional portion of the plan does not provide service enhancements to several existing stations on the Empire Corridor including: Schenectady, Amsterdam, Utica, Rome, and Niagara Falls.
Response	Thank you for your analysis of the service levels and stations served for the Alternative 125. Alternative 125 was designed to reduce trip time between New York City and western New York, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Brodnick, John
Comment I-70-3	It must be noted, that the 95% on time performance for Alternatives 90B and Alternative 110 may be a bit optimistic considering projected freight train growth. The National Rail Plan states "Between 2010 and 2035, the transportation system will experience a 22 percent increase in the total amount of tonnage it moves. When looking forward to 2050, the increase is 35 percent" (United States, 2010). This report did not consider the boom in crude oil currently moving along CSX's Rail network.
Response	Thank you for your comment on on-time performance goals. The on-time performance values account for future growth in freight trains. Comments from the public, relating to the support of the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred alternative.
Commenter	Brodnick, John
Comment I-70-4	Exhibit 6.8 (Impact on freight train operations) indicates how each alternative will impact freight train velocity. Alternative 110 received a "strongly supports program goals" with an average freight train speed of 30.8 mph Buffalo NY to Selkirk Yard. Alternative 125 makes the same trip with an average speed of 30.3 mph and the plan received a "supports program goals". It is questionable whether a 2% or 0.05 mph difference in a freight trains speed over a 300 mile run could be differentiated to a point of separating their qualitative ran kings. Considering all of the program goals listed in the draft EIS the only plan that meets all goals is Alternative 125
Response	Thank you for your comment. Exhibit 6.8 facilitates a comparison of several factors, in addition to average speed, of the freight performance and differences of the alternatives. Alternative 125 would create a new passenger train-only corridor between Albany and Buffalo and would not include any additional improvements to the existing rail corridor beyond what is proposed with the Base Alternative. Therefore, its rating regarding freight impact is the same as the Base Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Brodnick, John
Comment I-70-5	-Alternative 125 is the one and only high speed rail plan that meets all the goals of the Draft EIS. -Alternative 125 is the only plan the meets the New York State Senates High Speed Rail Task force goals for creating an adequate high speed network. -Alternative 125 is the only plan that modestly lives up to the international standard of high speed rail, and the only plan that has a chance of successfully attracting ridership.

-Alternative 125 is the only plan that has an advantage over driving, saving travelers over one hour on a trip from Buffalo to New York City

Response Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. Public comment has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would involve less right-of-way and environmental impacts than Alternative 125 and would also shorten the trip from New York City to Niagara Falls by 1½ hours. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations. This alternative would result in the best overall on-time performance for Amtrak service in 2035 (since Alternative 125 would not improve regional service at stations bypassed) and would also double the frequency of service between Albany and Buffalo. Because it is situated largely within the existing right-of-way, it can be constructed in substantially less time than Alternative 125 and will begin to confer benefits within 2 to 5 years after start of construction.

Commenter Broton, Shawn

Comment NO to high speed rail, we cannot afford it!
I-71-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the review process for the Tier 1 EIS.

Commenter Broton, Wendy

Comment I am against high speed rail because we cannot afford it.
I-72-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the review process for the Tier 1 EIS.

Commenter Bruce, Parker, D.S. Ray Middle School, D.S. Ray Middle School

Comment If New York State were to install a high speed rail, it would be a beneficial economic achievement as a whole. Overall, if the state builds a high speed rail, it will positively affect my generation and other generations to come. As a bonus, it will bring a much need income to the state.
I-73-1

Response Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Buie, Caesar

Comment I would enjoy having the rail in-place.
I-74-1

Response Thank you for your comment on the High Speed Rail Empire Corridor Program. Public comments, including support for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Burke, N

Comment I would like to express my support for 110 alternative for NY HS
I-75-1

Response Thank you for your comment supporting the 110 Alternative and the benefits from high speed rail. Public comments have been considered by the FRA and NYSDOT in the selection

of Alternative 90B as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter Burke, N

Comment I-75-2 Also, I hope that improvements to the stations will include better connectivity for pedestrians, bicyclists and transit users, to help make taking the train easy and accessible for everyone.
Please allow bicycles to be brought on the train as well. Bikes pair well with transit, and allow users to cover 'the last mile' between the train station and their final destination - no bike boxes or folding requirements, just a space for people to lock their bikes up on the train.

Response Thank you for your comments concerning the consideration of bicycles and pedestrians and accessibility of bicycles on trains operated in the High Speed Rail Empire Corridor evaluation process. Your comments have been considered by FRA and NYSDOT in the selection process for the Preferred Alternative. Stations for the Empire Corridor, in most cases, provide access to the public for public transit, automobiles, and pedestrians/cyclists. Currently, bicycles can be accommodated on the Empire Corridor, but require separate ticketing.

Commenter Burns, John

Comment I-76-1 I favor the Alternative 110 for the High Speed Rail Empire Corridor.
My second choice would be Alternative 90B

Response Thank you for your comment supporting the 110 Alternative and the benefits from high speed rail. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter Burton, Steven

Comment I-77-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
-The Terminal is centrally located within a two-mile radius of city-center
-The Terminal also has secure parking facilities for up to 450 vehicles
-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Bushey, Adam J.**

Comment I support spending the extra money and getting the faster trains that are consider as an option. Let's do it right the first time and spend the money.
I-78-1

Response Thank you for your comments in support of the High Speed Rail High Speed Rail Empire Corridor Program. All of the public's comment on the program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.

Commenter **Bussanich, Marc**

Comment I would like to see train service from NYC to Niagara Falls running at 125 mph.
I-79-1

Response Thank you for your comment supporting the 125 Alternative. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter **Buterbaugh, Corinne, Buterbaugh Partners, Buterbaugh Partners**

Comment I strongly support the expansion of high-speed rail, especially in NY State, for the following reasons:
I-80-1

- National security – We rely too heavily on air travel for long distances. 9-11 demonstrated how vulnerable having only one long-distance travel option makes us.
- Train travel is safer than other forms of transportation.
- Train travel is less harmful to the environment than driving cars.
- Train travel is much more pleasant than air travel.
- Train travel is much more convenient than other forms of transportation, and you can work onboard.
- Train travel is less likely to be disrupted by bad weather than air or highway travel, which is especially important in central and western NY.

- The United States lags Europe, Japan, and other nations on new technologies in rail travel. This is harmful to our national security and our economy. It is also extremely embarrassing. Other countries are investing in infrastructure, and we continue to allow oil companies to dictate a transportation system that is outdated and inefficient.
- Critics say high-speed rail travel is prohibitively expensive; however, if you count the cost of highway construction and maintenance and subsidies to oil companies, travel by car costs much more than the 56 cents per mile the IRS allows. Most of the costs of car travel are hidden. Remember: Carbon emissions also cost, economically and in terms of quality of life!
- Young people prefer rail travel. They are rejecting car-centric suburbs for walkable neighborhood and cities that are connected by rail. This will lead to the further decline of Buffalo, Rochester, and Syracuse. Our dependence on cars is one of the factors driving young people away.
- Eventually, high-speed rail will become necessary (there is only so much air space, our population is growing, and people are more mobile). Why wait to start building high-speed rail until it is even more expensive?
- High-speed rail will mean more jobs and GROWTH for central and western NY.

Response Thank you for your comments supporting the important place and role intercity rail passenger service has in our communities. Comments from the public have been considered in the selection by the FRA and NYSDOT of the Preferred Alternative, which will improve reliability, travel times, and frequency of train service.

Commenter Buterbaugh, John

Comment I-81-1 I support the proposed high-speed rail project on the Empire Corridor. High-speed rail would not only create jobs in our state but it would also reduce our dependence on automobiles and enhance our technological standing worldwide.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Buttery, Lewis

Comment I-82-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Byrne, Michael

Comment I-84-1 I support the concept of high speed rail service for New York State. It could have a very positive impact on the economy and quality of life in upstate New York.

Response Thank you for your comment on the High Speed Rail Empire Corridor Program. Public comments, including support for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter C., Alex

Comment I-85-1 My first concern has to do with the cost of this high speed rail.

Response Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter C., Alex

Comment I-85-2	A second concern of mine has to do with the time it will take to complete this project. Your website states it will take only 5 years to complete this project
Response	Schedules for construction and implementation of the different project components have not been determined at this time. The Service Development Plan provides scheduling of component projects, which will be further defined in Tier 2 assessments.
Commenter	C., Alex
Comment I-85-3	My last concern has to do with profitability. By what year would you expect to see a profit for this expensive project?
Response	Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection process for the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describes the costs and benefits of the program alternatives.
Commenter	Cadran, David, Vermont Rail Action Network Volunteer, Vermont Rail Action Network Volunteer
Comment I-86-1	I am writing as an interested “third-party” for the upgrade of this line. As a Vermont resident that relies on passenger rail for trips to NY and to bring travelers to our state, improvement of the Empire Corridor is crucial.
Response	Thank you for your comment supporting the benefits from high speed rail. Public comment has been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Cadran, David, Vermont Rail Action Network Volunteer, Vermont Rail Action Network Volunteer
Comment I-86-2	I am personally pushing for speeds of 110 mph which would help to create world class train service in the Empire Corridor to the benefit of all people in the region.
Response	Your comments supporting the 110 Alternative and the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative.
Commenter	Calandra, Nicholas M.
Comment I-87-1	I think this is a great idea. I would utilize the rail Buffalo to New York at least once a month. The Buffalo to Rochester and Buffalo to Syracuse a few times as well.
Response	Your comments supporting rail travel and the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Carey, Matthew
Comment I-88-1	I would implore you to please include bike and pedestrian accommodations on the Livingston Avenue bridge across the Hudson.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For

	more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Cargill, Todd
Comment I-89-1	I just recently became aware of the idea to use the old west shore railroad bed for this high speed rail project. As a resident of Swamp Road in the town of Bergen I am strongly opposed to this idea.
Response	Only Alternative 125 would use the former West Shore Railroad alignment in this area. The other alternatives, including Alternative 90B, would use the existing CSX right-of-way. Comments from the public, relating to the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Carni, Michael, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-90-1	I support the 110 alternative
Response	Thank you for your comment supporting the 110 Alternative and the benefits from high speed rail. Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative.
Commenter	Carr, Deborah
Comment I-91-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown

site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Casasanta, James

Comment I-92-1 Personally, I am disheartened true high speed rail was not included in the potential options. By true high speed rail I mean maglev trains and bullet trains, not unlike those that are used in Europe and Asia that exceed 220 mph. This is the definition of true high speed rail.

Response Thank you for your comment on the High Speed Rail Empire Corridor Tier 1 DEIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection process for the Preferred Alternative.

Commenter Casasanta, James

Comment I-92-2 Given the options at hand, the only two that make sense are the 110 mph option and the 125 mph option.
But preferable, the better option is the 125 mph option.

Response Thank you for your comment supporting the 125 and 110 Alternatives and the benefits from high speed rail. Public comments have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Casatelli, Jeanne

Comment I-93-1 Empire Corridor involving the section between the village of Castleton and Staats Island Road in Schodack.
I am following up to respectfully ask what is the status of at-grade crossings in this stretch which were supposed to be consolidated, closed and replaced with a bridge or underpass? I was told that a federal mandate in 1980 blocked new at-grade crossings from being created which has kept our family's land on Campbell Island without land access since 1979. I am more than willing to work with you to address the situation in this area to meet safety and access concerns for all involved.

Response Thank you for your inquiry as to the status of adding new grade crossings to this particular route in the High Speed Rail Empire Corridor Program. Your comment will be shared with Amtrak, the operator of the railroad and NYSDOT, as they will be able to better address your comment, as to safety requirements for constructing new grade crossings.

Commenter Catel, Alice

Comment I-94-1	I liked both 90B and 90A, but I think the impacts on historical and wetlands maybe too high in 90B – so my vote and support for 90A.
Response	Thank you for your comment supporting the 90A Alternative and the benefits from high speed rail. The supporting improvements for the 90B Alternative are primarily within the existing right of way, requiring little additional land and should have minimal impacts on historical sites or wetlands. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Catlin, Lindsay
Comment I-95-1	Rochester has become quite the music scene and would be a lot easier for others to get here if there was high speed rail.
Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Cecconi, Nick
Comment I-96-1	I understand the importance of this Empire Corridor project and high speed rail; I do not understand how momentum for the Binghamton-NYC line dissipated after the initial feasibility study was concluded.
Response	Thank you for your comment on the HSR Empire Corridor Program. The program considers improvement alternatives for the Empire Corridor. The route mentioned (Pocono Corridor) is approximately 80 miles south of the Empire Corridor and does not service the same cities as the Empire Corridor.
Commenter	Cecconi, Nick
Comment I-96-2	connecting to Syracuse with buses is not popular and would not maximize ridership, even if high speed rail is successfully brought to the corridor.
Response	Comments from the public have been considered as part of the Tier 1 EIS review process. The Service Development Plan focuses on revenue service for the High Speed Rail Empire Corridor Program, and Tier 2 assessments can further consider transit connectivity at stations.
Commenter	Champion, David
Comment I-97-1	I think it's time that New York State takes the lead with this high speed rail project. To help offset the cost of the project and future maintenance expenses simply follow what other projects such as Arenas, theaters and even the TSA does at the airport and charge a small fee on every ticket. When it's paid off the fee can be used for upgrades and equipment maintenance of the line and stations. Let New York lead the way and not be a follower. I fully support this project and feel it's worth the expense.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Comments from the public, including support for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Chelnov, Sandra
Comment I-98-1	I would highly recommend that ways be found to reduce the travel time between Buffalo and NYC be reduced to 4 hours.
Response	Your comments have been considered as part of the Tier 1 EIS review process. Several alternatives were reviewed that would have introduced higher speed trains than 125 mph,

	but it was determined that these alternatives would have a greater impact on the environment and higher costs.
Commenter	Chelnov, Sandra
Comment I-98-2	We are also concerned about climate change and the need to reduce green house gas emissions. While it is true that more construction requires more use of energy, the increased use of rail travel for both short and long distances and the decrease in car and air travel will play a significant role in reducing the state's greenhouse gas emissions.
Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered in the selection of the Preferred Alternative. With the Preferred Alternative, improving rail service along the Empire Corridor will encourage the public to shift from using automobiles, thereby helping to reduce carbon dioxide emissions and improving New York State's carbon footprint.
Commenter	Cherry, Elizabeth
Comment I-99-1	First I would like to say that the Empire Corridor is serving a wider population than you may realize. My fiancé and I travel by train whenever we travel. We live in Ithaca, so this requires a drive to Syracuse and the nearest train station.
Response	Thank you for your comments, relating to the support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. We agree with you about the importance of train travel regionally. Currently, the scope of the Tier 1 EIS focuses on the Empire Corridor from New York City to Niagara Falls, New York and the cities along the route. The Tier 2 assessments could examine other opportunities for indirectly (through transit or other connections) or directly serving additional communities along the route.
Commenter	Cherry, Elizabeth
Comment I-99-2	I am strongly in favor of the 125 option.
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. Public participation in the program is an important part of the selection process for the preferred alternative by the FRA and NYSDOT.
Commenter	Chiesi, Bill
Comment I-100-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Childs, Doreen
Comment I-101-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Cianchetti, John
Comment I-102-1	Niagara Falls needs help and this is it. Rail service can and will put the true JEWEL of New York and all of the East Coast on the map ! This is LONG overdue !
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route. Comments from the public have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Cipriani, Corindo
Comment I-103-1	High speed rail is a boondoggle, the cost exceeding enormously the benefits, now and in the very long run. Do NOT try to copy Europe, it's politically-correct, but this is a different land. AVOID spending on high speed rail ---- studies, commissions, etc.

Response	Comments from the public expressing their opinions of the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Clark, James
Comment I-104-1	I am convinced that this high speed rail service would serve this state as a whole better than any other transportation project conceived.
Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Clark, Kenneth
Comment I-105-1	Utica should be included in any development plans for high speed rail in Upstate NY. This area is in need of support to continue the efforts to provide jobs and attract new development (such as the NanoTech Center being worked on at SUNYIT). Bypassing the city would undermine ongoing efforts and would send a negative message to prospective developers.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Clute, Courtney, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-106-1	I highly disagree with the idea of the High Speed Rail. I think there are better things that we can spend money on. For Example, roads, and rail roads, and trains could use repairs. Bridges also need work done on them. They crack and become dangerous. Next, train tracks and trains; most train tracks today are in bad conditions.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Colangelo, Dominick
Comment I-107-1	NO HIGH SPEED RAIL SYSTEM
Response	Thank you for your opinion on the High Speed Rail Empire Corridor Program. Comments from the public, relating to the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Coleman, Stephen F., Licensed Psychologist, Licensed Psychologist
Comment I-108-1	I would certainly support additional resources to upgrade passenger train transportation through Upstate New York, particularly high-speed passenger train systems.
Response	Your comment in support of the High Speed Rail Empire Corridor Program has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Collins, John
Comment I-109-1	In the alternative information, I would like to see a break out of the Niagara Falls to Albany times

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Simulated travel times can be found in Appendix D, Rail Network Operations Simulation, of the Tier 1 EIS. Travel times simulated for 2035 between Niagara Falls and Albany range between 3:37 to 6:26 depending upon the alternative. In the Tier 2 assessments, additional information can be developed to show trip time between segments of the route in refining schedules.
Commenter	Collins, John
Comment I-109-2	It would also be beneficial to show in your brochures, information, and DEIS the "project cost per rider" (\$ per million projected riders) of each option.
Response	Thank you for your comment. The information on cost per rider is shown on Exhibit 6-9 of the Tier 1 FEIS, as annualized operations and maintenance cost and subsidy per rider.
Commenter	Collins, John
Comment I-109-3	Many photos of current improvement projects show the use of timber rail ties. Are more modern materials being considered in the project costs? More modern materials like concrete ties may provide a longer service life, and hence be a better investment. Thus, material options should be considered that may raise construction costs but provide a better, long term investment.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The photos used in the Tier 1 EIS are for illustrative purposes only. Construction materials used for any high speed rail improvement projects will be determined as the projects are developed and will be consistent with rail industry best practices and conform to Federal Railroad Administration regulations and requirements. In certain situations and environments, it should be recognized that wood crossties may be required to meet field conditions.
Commenter	Collins, Timothy
Comment I-110-1	What if this new rail system is a flop and trains go un-filled thus losing money or revenue to run as planned? Who will pick up that tab?
Response	Your comments concern ridership and revenue opportunities, which have been evaluated as part of the Tier 1 EIS analysis used by the FRA and NYSDOT to determine the Preferred Alternative. In addition, the Service Development Plan considers service strategies that promote increased ridership of intercity passenger trains along the Empire Corridor. Comments from the public, relating to the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Collins, Timothy
Comment I-110-2	What are the prices going to be? Is it going to be affordable or outrageously expensive? What about the safety of a train traveling more than 100 miles an hour through an automobile intersection? I'm not saying I wouldn't use it, I'm saying there will be millions of people that won't. Is/Would this project be financially secure enough to support itself if it doesn't receive the number of passengers it hopes for?
Response	Thank you for your comments discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way. Ridership and revenue opportunities have been addressed in the analysis used by the FRA and NYSDOT in determining the Preferred Alternative for the project, as described above. Chapters 2 and 3 of the Tier 1 EIS address safety for the existing corridor and the program alternatives. Comments from the public have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Collins, William L.

Comment I-111-1	I favor Alternative 125 for the Empire Corridor. We must plan for the future transportation needs of NYS, not for the least expensive option. We need a serious competitor to air travel inside NYS.
Response	Thank you for your comments in support of Alternative 125 and the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Cominsky, Sidney, Law Offices of Sidney O. Cominsky, LLC, Law Offices of Sidney O. Cominsky, LLC
Comment I-112-1	Constructing a high speed rail system might be the only way to revive upstate New York. Public monies should and must be used for this project
Response	Thank you for your comment supporting the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would double the frequency of service between Albany and Buffalo.
Commenter	Condo, Will
Comment I-113-1	My field is economic development, and upstate New York needs/requires efficient, reliable transportation options to regain economic growth. All options for “high” speed rail would be an improvemet – if we were plannig for the 19th or 20th century. Optio 125 is by far the best option offered – but – 220-300 is what should be the goal.
Response	<p>Thank you for your comments for on the need for trains to operate at higher speeds on the High Speed Rail Empire Corridor Program. Comments from the public, relating to Alternative 125, have been considered by the FRA and NYSDOT, in the selection of Alternative 90B as the Preferred Alternative.</p> <p>During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered, but were not advanced, in part because they would bypass all but four of the existing stations along Empire Corridor West. Moreover, it was also determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate than the Preferred Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.</p>
Commenter	Conklin, Richard
Comment I-114-1	With a High - Speed Train/Transit System, I would not only be able to afford it because it would be much cheaper than flying, as it cost's 1/4 of that price, but with the Central Terminal in Buffalo, I would be able to make connections there to continue to visit relatives living on the East Coast in places like New York City, Delaware, Connecticut and do so all withing the same amount I would spend for one trip! It would cost 2-3 times the current amount of airline tickets to make a flight to the same destinations and yet the cost for train travel would allow me to make trips more often and to farther destinations and still save spending money for the city's I visit.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Conner, Robert
Comment I-115-1	Please build this! Please build this rail, quick travel between Buffalo and New York City is exactly what I need
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program. Comments from the public have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Cook, Joyce
Comment I-116-1	I like the 125mph proposal, and wish that one could happen. But if it can't, then at least upgrade some of the worst tracks so the trains can travel faster than those cars on the Thruway!
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. Public comments have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). One of the drawbacks of Alternative 125 is that express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady.
Commenter	Cooley, Stacie
Comment I-117-1	would love to have high speed rail.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Public comments, including support for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Kuersteiner, Donna and Cooper, John
Comment I-118-1	We were appalled to hear that a new highspeed might bypass Utica & Rome. Utica has fine refurbished station and it is well used. It seems wasteful to build a new rail line at huge

expense south of this area to gain a slight increase in speed (125 mph as opposed to 95 - 110 mph to go through Utica and Rome) , please continue the line through these two cities.

Response Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.

Commenter Cope, Robert D.

Comment I-119-1 I fully support the High Speed Rail initiative. This project can greatly cut into our dependence on fossil fuel and help the environment.

Response Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Cording, Carl

Comment I-120-1 This is a very important socioeconomic project—just what the Capital District needs!

Response Thank you for your comment supporting the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Cornwell, Kirk

Comment I-121-1 This is to make clear my unequivocal support for whatever is necessary to make the Albany-Rensselaer RR bridge usable for bicycle and pedestrian traffic.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Cox, Jane

Comment I-122-1 After attending the public hearing in Buffalo, I agree that a dedicated rail line for high speed trains is the answer. I prefer Alt #110, which would not require acquisition of separate corridor land.

Response Thank you for your comments supporting Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but the Preferred Alternative (Alternative 90B) would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.

Commenter Cox, Jane

Comment I-122-2 Please do not consider anything less than Alternative #110. Doing nothing should not be an option.

Response	Your comment in support of 110 Alternative has been considered in the selection of Alternative 90B as the Preferred Alternative. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. For these reasons and those outlined above, this alternative was dismissed from further consideration.
Commenter	Cox, Robert W.
Comment I-123-1	Alternative #110 is the minimum plan option, in my opinion.
Response	Thank you for your comment in support of 110 Alternative. Public comments, relating to Alternative 110, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative, for the reasons outlined above. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Craig, Susan A.
Comment I-124-1	I am a strong supporter of Alternative 12
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. Public comments have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Craig, Susan A.
Comment I-124-2	I am a frequent, very frequent traveler up and down the Empire Corridor now. Five times out of six on my way home from Amsterdam to NYC the train is delayed by several hours.
Response	Thank you for your comments supporting the Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Craine, Allison
Comment I-125-1	I think it would be a great idea.
Response	Your comments and support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Crandall, Brian
Comment I-126-1	While I certainly appreciate the infrastructure investment brought by this project and its various proposals, I have concerns regarding the impact on historic resources through land acquisition in the grander proposals; our historic resources are one of our greatest assets, and the detrimental impacts of transportation projects like the Thruway are still apparent in cities like Syracuse. I also have concerns with some of the socioeconomical impacts

described, because some things can be more “black-and-white” (population projections), while others are “grey,” such as people in the NYC metro moving further north up the Hudson Valley.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Comments from the public have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts.

Commenter Crittenden, Gregory

Comment I-127-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal’s use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation’s Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Cruce, Joanne

Comment I-128-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal’s use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Crysler, Robert E.

Comment I-129-1 I am in favor of the continued consideration of this infrastructure project however the emphasis should shift to Return On Investment (ROI) versus Cost. I would also see a Life Cycle Analysis as well as some historical ROI analysis on past infrastructure projects such as the Erie Canal, The Panama Canal, Rural Electrification and particularly other passenger rail projects.

Response Thank you for your comments. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Chapters 5 and 6 of the Tier 1 FEIS describe the costs and benefits of the program alternatives.

Commenter Crysler, Robert E.

Comment I-129-2 I am strongly in favor of high speed rail through the Empire Corridor of New York State.

Response Thank you for your comment on the High Speed Rail Empire Corridor Program. Comments from the public, including support for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Crysler, Robert E.

Comment I-129-3 Personally, I would also like to see a consideration of short line in upstate New York in addition to high speed rail.

Response Thank you for your comments. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. In the future, consideration could be given to other supporting rail projects on the route between New York City and Niagara Falls.

Commenter Curcio, Brad

Comment I-130-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Curtis, Robert**

Comment I-131-1 It is with excitement that I read of possible high speed rail for upstate NY. This may improve employment by making it more possible for people to travel more efficiently around the state.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route. Comments from the public have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As noted in the Tier 1 FEIS, Alternative 90B would double the service frequency along Empire Corridor West.

Commenter **Czuprynski, Larry**

Comment I-132-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-130-1.

Commenter Danieu, Eamon

Comment I-133-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-130-1.

Commenter D'Anthony, Dante

Comment I-134-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-130-1.
Commenter	Dasey, Theresa M.
Comment I-135-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-130-1.
Commenter	(No Last Name), David
Comment I-136-1	no to high speed rail.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Comments from the public have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Davis, Cindy
Comment I-137-1	Attached, you will find a letter sent by Marilyn Rodgers, Executive Director/CEO of the Central Terminal Restoration Corporation, to the NYS DOT outlining our position, as well as highlighting a recent resolution adopted by the City of Buffalo Common Council regarding their position favoring the Central Terminal's reuse as part of this project. As always, thanks for supporting the Buffalo Central Terminal!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee,

tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Davis, Jim

Comment I-138-1 I sincerely believe that the economic benefits to this state will exceed anyones expectations. The potential for tourism in Upstate NY is largely an untapped resource.

Response Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As noted in the Tier 1 FEIS, Alternative 90B would double the service frequency along Empire Corridor West.

Commenter Davis, Jim

Comment I-138-2 Is the NY Thruway right-of-way off limits for any kind of rail service, including light rail?

Response Comments from the public have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Regarding your question on the potential use of the Thruway right-of-way, Alternative 125 follows the New York State Thruway between Albany and Schenectady. In other areas, the grades, curvature of the Thruway, and availability of additional property for the high speed rail right of way in some locations, did not support following the highway.

Commenter Davis, Jim

Comment I-138-3 All things being equal, the “125” alternative is “way too much too soon.” Alternatives 90A, 90B, and 110 are all reasonable and will produce multiple benefits.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Comments from the public have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 would create a dedicated, 2-track passenger right-of-way over much of the Empire Corridor and was dismissed due to higher costs and impacts. Alternative 90A would not provide the same level of transportation benefits as it would not add the same capacity as Alternatives 90B and 110 (which each provide more than 300 miles of additional trackage). Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.

Commenter Davis, Jim

Comment I-138-4 The Empire Corridor plan is great. I wonder if the plan could be expanded sometime to include a) Albany to Montreal, and B) Albany to Boston?

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Currently, the goals and objectives of the program are the improvement of intercity rail passenger service along the Empire Corridor from New York City to Niagara Falls. Amtrak service to Boston is provided via the Lake Shore Limited Line. Service to Boston is currently provided by Amtrak over the CSXT's Boston Line and the Massachusetts Bay Transportation Authority's Worcester Line. Improvements on this line could be considered in the future, but requires partnering with Commonwealth of Massachusetts and these host railroads. Amtrak service to Montreal is currently provided via the Adirondack Line. New York State has had a long partnership with Amtrak to provide service to Montreal dating back to 1974,

	and utilizes the tracks of the Canadian Pacific for this route. Over the years, New York State DOT has improved the tracks, including recently new double track in the area of Ballston Spa, to upgrade passenger trains operations on this route.
Commenter	Davis, Steve
Comment I-139-1	Having traveled Amtrak as recently as 4-26-14 my experiences would ten to favor more Amtrak dedicated rail would speed up service much more cheaply and cost effective.
Response	Thank you for your comments on the high speed rail program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.
Commenter	Davis, Steve
Comment I-139-2	As I use the Utica station exclusively I would also not favor it being dropped from the schedule and having no stops between Schenectady and Syracuse which would mean the longest non-stop routing in the entire system. Alt 125.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Dearing, Andrew
Comment I-140-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee,

tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Decker, Leigh

Comment I-141-1 I believe New York should leave the idea of a "high speed rail system" alone.

Response Thank you for your comments. Comments from the public, relating to the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Decker, Leigh

Comment I-141-2 A lesson for New York is that high speed rail systems only work if there are ample transportation options at each destination. This requires European style metro systems and dense urban cores, neither of which is the majority of America's strong suit.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Individual projects or groups of projects for the Preferred Alternative will be advanced according to the Service Development Plan to Tier 2 environmental evaluations and design development. Suggestions and comments for improving connectivity between different modes of transportation with rail passenger service have been considered in the development of the Service Development Plan. The Empire Corridor connects the largest cities in the state, from New York City, Yonkers, to Albany, Syracuse, Rochester, and Buffalo. For station projects, opportunities for multimodal connectivity can be pursued with the local municipality and transit provider.

Commenter Degenfelder, Ron

Comment I-142-1 If you are considering a location in Buffalo area for high speed rail/transportation, the Central Terminal has been waiting years for you.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-140-1.

Commenter Dekdebrun, Kylie

Comment I-143-1 It would be a wonderful opportunity to redevelop Buffalo's Central Terminal with a new era of train travel.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-140-1.

Commenter Delmonte, Andrew

Comment I-144-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-140-1.

Commenter DeLude, Danielle

Comment I-145-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-140-1.

Commenter Dembrosky, Stan

Comment I-146-1 I think someone should look at electrifying the New York to Buffalo line.

Response Thank you for your comment. Chapter 3 of the Tier 1 EIS discusses the types of power used in each of the alternatives considered. Alternative 125, which was dismissed from further consideration in the Tier 1 FEIS, would have used electric power. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance.

Commenter	De Muth, Roger
Comment I-147-1	Having a high speed rail line between upstate and NY city would stimulate the economy of upstate dramatically Yes I approve! Do it!
Response	Thank you for comments on the benefits of the High Speed Rail Empire Corridor Program. Economic costs and benefits of each alternative have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	DeNora, Nick
Comment I-148-1	Buffalo needs all the help it can get. When Buffalo had trains just look at the Central Terminal it was a huge hub. Therefore bring the Trains back please
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Desjardins, Zachary
Comment I-149-1	My favorite option is the 125mph option but without a new right of way and without electricity.
Response	Thank you for your comment supporting Alternative 125, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 125 would create an exclusive new right-of-way, which would involve potential impacts on 2,000 to 3,000 acres of land.
Commenter	Desjardins, Zachary
Comment I-149-2	Who made the decision to capitulate to CSX, the owner of the right way, and study only options outside of its right way for 125mph? Why wasn't a third track with the existing Empire corridor studied?
Response	Thank you for your comment concerning alternative alignments in the High Speed Rail Empire Corridor Program. Chapter 3 of the Tier 1 EIS discussed alternative selection and reviews for each of the alternatives considered. Portions of the existing corridor geometry can support 125 mph maximum authorized speed, however, just like the 110 and 90 mph Alternatives, there are portions of the corridor that could not be realigned to support 125 mph, so trains would have to slow down and speed up at each civil speed restriction. That is, the trip time (or average speed) for the new corridor 125 Alternative will be better than

	the trip time (or average speed) for an existing-corridor 125 Alternative. The Preferred Alternative, Alternative 90B, will provide over 280 miles of third track, largely located within the existing railroad right-of-way.
Commenter	Desjardins, Zachary
Comment I-149-3	Why didn't the commission study an option for 125mph diesel trains instead of only 125mph electric trains?
Response	Thank you for your question. The Tier 1 EIS discusses the types of energy used for trains in Chapter 3 and Section 4.20. For Alternative 125, a dual mode diesel-electric locomotive was considered. Selection of the Preferred Alternative, Alternative 90B, for the High Speed Rail Empire Corridor Program, by the FRA and NYSDOT, considered locomotive propulsion and the types of energy for train movements. Equipment selections and specifications will be further reviewed and evaluated as the program moves forward in the Tier 2 assessments.
Commenter	Desjardins, Zachary
Comment I-149-4	why weren't tilting train options studied?
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. The selection of Alternative 90B as the Preferred Alternative, by the FRA and NYSDOT, considered railroad technology and systems as discussed in the Tier 1 EIS. Electrified dynamic tilt trains were evaluated in Chapter 3 as part of the 160 mph and 220 mph Very High Speed (VHS) alternatives, which were dismissed from further consideration.
Commenter	Desjardins, Zachary
Comment I-149-5	I think NYS should put its money into building a 125mph diesel train system using as much of the existing infrastructure and right of way as possible.
Response	Thank you for your comment on the alternative selection for the High Speed Rail Empire Corridor Program. Portions of the existing corridor geometry can support 125 mph maximum authorized speed, however, just like the 110 and 90 mph Alternatives, there are portions of the corridor that could not be realigned to support 125 mph, so trains would have to slow down and speed up at each civil speed restriction. Chapter 3 of the Tier 1 EIS discusses alternative selection and evaluations of the alternatives considered. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternatives 110 and 125. Selection of Alternative 90B as the Preferred Alternative, by the FRA and NYSDOT, considered locomotive propulsion and types of energy for train movements (see Section 4.20 of Tier 1 FEIS). Equipment selections and specifications will be further reviewed and evaluated as the program moves forward in the Tier 2 assessments.
Commenter	Desjardins, Zachary
Comment I-149-6	Buy Super Voyager tilting trains or EMD F125 locomotives to allow for 125mph speeds
Response	Thank you for your comments, relating to the types of equipment to be operated as part of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Equipment selections and specifications will be further reviewed in Tier 2 assessments. Any rolling stock selected for operation will need to comply with Federal Railroad Administration

	regulations, and capable of mixing in operation with other trains and locomotives on the North American railroad network.
Commenter	Desjardins, Zachary
Comment I-149-7	Upgrade the Hudson Line between Albany-New York City for 125mph speeds in most sections
Response	Thank you for offering your support of the Alternative 125. The FRA and NYSDOT have considered operating speeds and trip times in the selection of Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program. Operations on the Hudson Line are constrained by shared operation with Metro-North Hudson Line commuter rail trains, and Alternative 90A improvements (that are included in the Preferred Alternative) includes upgrades to the line to increase operating speeds.
Commenter	Desjardins, Zachary
Comment I-149-8	Upgrade the Empire Line between Schenectady and Depew for 125mph speeds in some straight sections and bottleneck sections such as Rochester to Depew or Syracuse to Utica
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Alternative 90B would involve less right-of-way and environmental impacts than Alternative 125 and would also shorten the trip from New York City to Niagara Falls by 1½ hours. This alternative would result in the best overall on-time performance for Amtrak service in 2035 (since Alternative 125 would not improve regional service at stations bypassed) and would also double the frequency of service between Albany and Buffalo. Because it is situated largely within the existing right-of-way, it can be constructed in substantially less time than Alternative 125 and will begin to confer benefits within 2 to 5 years after start of construction. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations.
Commenter	DeStefano, Linda A.
Comment I-150-1	What is missing is an evaluation of a new reality, namely, that there are now a large number of railroad tankers which carry crude oil from the Bakken Shale in N. Dakota through upstate New York. The crude is more volatile than other crude, and more than one explosion has already occurred. The worst was in July, 2013 in which much of a small village in Quebec was destroyed, and 47 people were killed. Sen. Charles Schumer has called these tankers "bomb trains". New standards for tankers would reduce the danger, but these tankers are not now being used. The trains go through downtown Syracuse. If there were an explosion, how could people be evacuated quickly? The trains also travel along Onondaga Lake. Much has been done to clean up the lake and to build amenities. The trains go right over a trail. An amphitheater is proposed for the lake shore. Even without an explosion, a spill could contaminate the lake and would make the amenities unusable until adequate cleanup was completed. Thus, I request that the EIS include an analysis of how high speed rail impacts safety, environmental and social aspects of these tankers.
Response	Thank you for your comments. Minimizing interference with freight rail operations is one of the six performance objectives of the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. These improvements that will reduce congestion, delays and interference between passenger and freight trains will improve safety. Chapters 2, 3, and 4 of the High Speed Rail Empire Corridor Tier 1 EIS address alternatives, and safety and environmental benefits and concerns.

Commenter	Dettman, Perry
Comment I-151-1	Any train has very limited use for the entire state, a lot of money spent for the few people who want to use it. It will be like Rochester's Fast Ferry, a lot of money spent with only a very small percentage of people in the area using it.
Response	Thank you for your comments. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Dettman, Perry
Comment I-151-2	A Fast Train could be a whole lot of law suits waiting to happen, as it races threw rail crossings, possibly crashing into motor vehicles in its path. As well as possible derailments, not a far fetched opinion,as I'm a retired trucker, I can predict this will happen.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Dewitt, John
Comment I-152-1	I support the Alternative 110 option.
Response	Thank you for your comment supporting the 110 Alternative, which has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but the Preferred Alternative (Alternative 90B) would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.
Commenter	Dillingham, Justin
Comment I-153-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not

included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Dobucki, Randy

Comment I-154-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-153-1.

Commenter Dolhy, Paul

Comment I-155-1 Explain to me how adding 1 track is going to work?

Response Thank you for your comment. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. The Preferred Alternative, Alternative 90B, will provide over 280 miles of third track, largely located within the existing railroad right-of-way. The FRA and NYSDOT considered the operation of passenger and freight trains along the Empire Corridor in each of the alternatives outlined in the Tier 1 EIS in the selection of the Preferred Alternative.

Commenter Dolhy, Paul

Comment I-155-2 You need two tracks not one, two tracks for csx freight & two tracks for Amtrak pass.

Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. The Tier 1 EIS reviews the operation of multiple tracks along the Empire Corridor, including developing specific track diagrams and modeling/simulation of rail operations, to identify the necessary infrastructure projects that will improve travel times and the reliability of service. Alternative 90B would restore large sections of third and fourth track.
Commenter	Dominguez, Javier
Comment I-156-1	I would like to see NYSDOT reach out to college campuses and get more feedback from the college students.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Recognizing the importance of public awareness for the project, six public hearings were held across the state between March 4, 2014 and March 12, 2014 in Albany, Syracuse, Buffalo, Rochester, Utica, and Poughkeepsie. The Albany public hearing was held at the College of Nanoscale Science and Engineering. Three additional informational meetings were held including one at Niagara University. In addition the project has a website: https://www.dot.ny.gov/empire-corridor , that provides the option of downloading the Tier 1 DEIS and other supporting documents.
Commenter	Dominguez, Javier
Comment I-156-2	I feel that the student population would be in favor of the 125 plan.
Response	Thank you for your comment. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). A substantial drawback of Alternative 125 is that it would take the longest time to construct and would be the costliest alternative.
Commenter	Donnelly, Jr., Peter
Comment I-157-1	90A seems the safest bet as it addresses the need for more East-West trains and improves infrastructure.
Response	Thank you for your comment, relating to Alternative 90A, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Donnelly, Jr., Peter
Comment I-157-2	I do not feel that 125 justifies its costs.
Response	Thank you for your comments, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts.
Commenter	Donnelly, Jr., Peter

Comment I-157-3	If this plan were to be adopted, I would strongly recommend that there be an increase in local train travel between Syracuse and Albany
Response	Thank you for your comments on improvements to the service, which have been considered in the development of the Service Development Plan and the selection of Alternative 90B as the Preferred Alternative. This alternative would result in the best overall on-time performance for Amtrak service in 2035 and would also double the frequency of service between Albany and Buffalo. Projected level of service and train travel times between Syracuse and Albany for each alternative can be found in Appendix D, Rail Network Operations Simulation.
Commenter	Donnelly, Jr., Peter
Comment I-157-4	I strongly support 90A because it fulfills the most basic needs (time efficiency and more options).
Response	Thank you for your comment supporting Alternative 90A, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Donnelly, Jr., Peter
Comment I-157-5	I feel that 110 is a better long term plan provided that the building needs of 90B are not urgent, and provided that there will not be major resistance of the building of new rails.
Response	Thank you for your comment supporting the 110 Alternative. Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative.
Commenter	Donnelly, Steve
Comment I-158-1	Let's develop a multi-phase master plan consisting of: (1) Holding CSX accountable for poor dispatching and host railroad responsible delays (2) improve the border crossing process to/from Canada (3) implement incremental improvements of the rail system we currently have (4) higher speed rail.
Response	Thank you for your comments, which have been considered in the development of the Service Development Plan and Tier 1 FEIS. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would shorten the trip from New York City to Niagara Falls by 1½ hours, which would also benefit Maple Leaf service continuing on into Canada. The focus for the program is on improvements along the Empire Corridor between Niagara Falls and New York City. This alternative would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The SDP provides a schedule for phased implementation of the individual projects comprising the program.
Commenter	Dougherty, Catherine
Comment I-159-1	High speed rail should use existing tracks and stop in every city along the route including Utica/Rome.

Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative will double the frequency of service to Rome and Utica.
Commenter	Dougherty, Catherine
Comment I-159-2	The Utica/Rome corridor region has Nanotechnology and Drone manufacturing companies relocating to the region. The nearest proposed high speed rail stop is in Syracuse and that is unacceptable and too far to drive back to Utica. This project should be used to renovate existing tracks and routes.
Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative will double the frequency of service to Utica and the stations in the Mohawk Valley.
Commenter	Drajem, Lynn
Comment I-160-1	Yes please make the Central Terminal a stop on this project.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Drake, Paula
Comment I-161-1	Let's get going! This is a desperately needed services
Response	Thank you for your support for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection the Preferred Alternative.
Commenter	Du Bois, Patricia
Comment I-162-1	I find it appalling to see such HIGH SPEED trains screaming along PRIMITIVE ground rail systems Why aren't you constructing MONORAILS high above ground like 30 feet above ground so you can scream across at 2-300 mph from one city to the next. Why don't you take a look at Walt Disney World's monorail system, take a look at Regal Theatre's opening commercial that begins the show.

Response Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. Alternative 125 would involve construction of a viaduct on structure in places, but it would involve considerable costs and impacts (to 2,000 to 3,000 acres of land). It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Dudek, Jessica

Comment I-163-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-160-1.

Commenter Duszynski, Peter

Comment I-164-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for reviewing the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The goals of the program include using the improved intercity rail passenger service to promote economic activity along the route and increase the attractiveness of the region for business. In the Tier 1 EIS, Chapters 3 and 4 discuss the positive impacts of the program. More specifically, Section 4.3, Regional Population and Employment, and Business Districts, discusses how the program will create employment opportunities and support the labor markets in the regions served by the improved rail service.

Commenter Duszynski, Peter

Comment I-164-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations. Compromised or limited service on the current freight network may force many companies to alter business operations and begin shipping more products by truck – increasing cost, increasing our environmental footprint and increasing traffic on New York roadways.
Response	Thank you for your comments. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preserving and improving freight rail traffic to the economy of New York State has been an important factor in the selection of the Preferred Alternative.
Commenter	Dworzanski, Ray
Comment I-165-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Commenter Eames, Frederick

Comment I-167-1 As upgrading the Livingston Avenue bridge must be a part of this plan, PLEASE consider that a bicycle-pedestrian walkway on the bridge must be a part of this upgrade. It's quite obvious. It would provide a much safer and friendlier crossing than the current Dunn Memorial bridge, as described by Casey Seiler in the Times-Union on April 27. Aside from its practical value for pedestrian traffic, it can be an attraction in itself, because of its proximity to the Corning Preserve waterfront area (though not as spectacular as the Poughkeepsie Walkway, it can have a similar stimulating effect on local recreation.)

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Elton, Wallace

Comment I-168-1 I write to express my general support for the Empire Corridor Project to bring high-speed rail to the NYC-Albany-Buffalo corridor.

Response Thank you for your comment, relating to the support of the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative will double the frequency of service between Albany and Buffalo.

Commenter Elton, Wallace

Comment I-168-2 There is, however, another use of this (the Empire West portion) historic transportation corridor that the EIS should acknowledge and assess impacts on: the Erie Canal way Trail.

Response Thank you for your comments on the Tier 1 EIS. Existing conditions related to the Erie Canalway Trail are presented in Appendix G, Environmental Inventory and Impact Assessment and Sections 4.6 (waterways), 4.8 (navigable waters), 4.15 (historic resources),

	and 4.16 (parklands/recreation areas). These sections of the Tier 1 FEIS address the potential impacts of the Preferred Alternative on the canals and canal trails.
Commenter	Elton, Wallace
Comment I-168-3	In the larger picture, the Empire Corridor Project should support and facilitate bicycle and pedestrian opportunities throughout its route by including linkages and facilities wherever feasible.
Response	Thank you for your continued interest in the High Speed Rail Empire Corridor Program. A number of station improvement projects have been completed as separate independent projects along the Empire Corridor, including reconstruction at the Buffalo-Exchange Street Station. Currently, bicycles can be accommodated on the Empire Corridor, but require separate ticketing. Comments from the public, relating to the accessibility of bicycles and pedestrians, have been considered in the design of station facilities and other facilities constructed as separate projects along the route and in the Tier 1 assessments for Empire Corridor. Individual projects, or groups of projects, will undergo a second evaluation (Tier 2) to further advance design for that project, or group of projects including looking at options for pedestrian/bicycle accommodations.
Commenter	Elton, Wallace
Comment I-168-4	In one specific example, the new or refurbished Livingston Avenue Bridge over the Hudson River in Albany must include provision for bicycles and pedestrians.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Englert, Timothy
Comment I-169-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at

the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Erdmann, Tyler

Comment Buffalo needs to be considered for the high speed rail line!
I-170-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the stations in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of improvements for the purpose of making decisions on corridor-level service. The focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Ericson, Del

Comment Fast train was favorite spot for suicides when we lived near the Boston to Washington, DC. Make sure to include safety fence at high risk areas in your cost estimates.
I-171-1

Response Thank you for your comments about safety on this high speed rail line. All feasible safety measure including those cited by the commenter will be considered, if appropriate, as the design stages progress and will be analyzed in the Tier 2 analysis. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. The Tier 1 FEIS accounts for several types of fencing and warning systems, including installation of perimeter fencing on both sides of the right-of-way on portions of the right-of-way to prevent trespassing. The Tier 1 FEIS addresses fencing and other safety features for the Preferred Alternative in Section 3.3.3, under the "Safety" section.

Commenter Eson, Jud

Comment The planned rebuilding of Albany's Livingston Avenue Railroad Bridge presents a one-time, unique opportunity to create a pedestrian / bicycle walkway between both sides of the Hudson River.
I-172-1

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Evans, J. Reid

Comment I-173-1	I highly support the high speed rail project for the Empire Corridor
Response	Thank you for your comments expressing support for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Everett, Norma
Comment I-174-1	I feel that Buffalo Central Terminal reuse should be included in the proposed NYS high speed rail plans
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-169-1.
Commenter	Eyington, David
Comment I-175-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Commenter	F., Audrey
Comment I-176-1	I think that the establishment of the high speed rail between Albany and New York will help a lot of students
Response	Thank you for your support of the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Falbo, A.
Comment I-177-1	Localized Buffalo rapid transit lines should be below ground in neighborhoods. This will protect the integrity of the neighborhoods and communities. Be smart - below ground in local Amherst areas. Above ground is great for state span distances Buf to Albany. SO UNDERGROUND TRANSIT LINE IN AMHERST!

Response	Thank you for your comments. The High Speed Rail Empire Corridor Program focuses on improving intercity rail passenger service between New York City and Niagara Falls. Improvements to the light rail or rapid transit system in the Buffalo area is not part of the scope of this program.
Commenter	Falbo, Antone
Comment I-178-1	We want underground local rapid transit lines in Amherst please.
Response	Thank you for your comments. The High Speed Rail Empire Corridor Program focuses on improving intercity rail passenger service between New York City and Niagara Falls. Improvements to the light rail or rapid transit system in the Buffalo area is not part of the scope of this program.
Commenter	Fandl, Richard
Comment I-179-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	(No Last Name), Fanying
Comment I-180-1	The most important aspects of travel is consistent on time performance (does not have to be the fastest) just consistent so I can properly budget my time effectively. High speed is nice but predictable travel time is most important,

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program regarding on time performance, which have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Farina, Nicholas J.
Comment I-181-1	I read a story in our local paper that the proposed high speed line if constructed at 125mph would bypass Utica. How idiotic an idea is that!
Response	Your comments about preserving intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125, a high-speed railroad on a new alignment, was designed to help cut the distance between Albany and Syracuse by 14 miles. One of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. As discussed in Chapter 3 of the Tier 1 FEIS, the Preferred Alternative would increase service to Utica.
Commenter	Farrell, Shirley
Comment I-182-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for reviewing the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Chapters 3 and 4 discuss the positive impacts of the program. More specifically, Section 4.3, Regional Population and Employment, and Business Districts, discusses how the program will create employment opportunities and support the labor markets in the regions served by the improved rail service.
Commenter	Farrell, Shirley
Comment I-182-2	I strongly encourage the state to include High Speed Passenger rail ONLY as it would run apart from the freight rail network.
Response	Thank you for your comment, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The importance of segregating passenger rail from freight and preserving and improving both passenger and freight rail traffic to the economy of New York State has been an important consideration. As outlined above, the additional trackage provided by the Preferred Alternative, Alternative 90B, would improve both passenger and freight rail capacity and operations.
Commenter	Farrell, Shirley
Comment I-182-3	I urge the state to maintain current freight service and the capacity for growth by selecting the base alternative.
Response	Thank you for your interest in the High Speed Rail Empire Corridor Program. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Farrell, Don

Comment I-183-1	this is a huge waste of money like the bridge to NOWHERE. Amtrak is a waste too the money will be better spent on bridge repair/replacement !!
Response	Thank you for your comments, relating to the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Farrington, Alexandra
Comment I-184-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Fassler, Cary
Comment I-185-1	<p>My sister and her husband, both profs at Notre Dame would visit us more frequently in Oswego county if train service improved to Syracuse. My wife and I would go to NYC more frequently if train service was acceptable from Syracuse or Utica.</p> <p>The U.S. should not allow our infrastructure to blunder into third world status and allow the loud government haters to win this war.</p>
Response	Thank you for your comments, supporting the program, which have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. Alternative 90B would shorten the trip from New York City to Niagara Falls by 1½ hours and would also double the frequency of service to destinations along Empire Corridor West, including Syracuse and Utica.

Commenter	Faulds, Colin and Fratesi, Victor
Comment I-186-1	We are very supportive of Alternative 110 for the Empire Corridor renovations and new construction.
Response	Thank you for your comments supporting the 110 Alternative, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but the Preferred Alternative (Alternative 90B) would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.
Commenter	Faust, Catherine
Comment I-187-1	Please include Buffalo's historic NY Central as an intermodal train station for the NYS High Speed Rail Empire Corridor.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Fava, Peter
Comment I-188-1	No poster of Utica when we inquired. We were told 'Utica already has a beautiful station'. This is true. Does that mean Utica will not receive any other upgrade?
Response	Thank you for your comment regarding the passenger station in Utica. As described in Section 3.3.3 of the Tier 1 FEIS, the Preferred Alternative, Alternatives 90B includes making operational and platform improvements to Utica Station. The specific details of these improvements would be determined in a project level evaluation conducted at a later date as part of the Tier 2 assessments.
Commenter	Fava, Peter
Comment I-188-2	NY State does not have the wide open space of some other areas. Do we need to spend billions of dollars to go to 110 or 125 miles per hr? how often would the trains be able to sustain these speeds?
Response	Thank you for your comments on the costs of Alternative 110 and 125 for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In selecting Alternative 90B, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Fava, Peter

Comment I-188-3	Any plan that takes Utica off the route or stops is out of the question. Having to get off a "High Speed" train and transfer to a "regional" train is a disservice. Where is the time saving and efficiency for our area residents?
Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative will double the frequency of service to Utica, unlike Alternative 125. Since Alternative 125 would bypass Utica, express service to this station would not be provided.
Commenter	Felder, Vincent R.
Comment I-189-1	I am in favor of Alternative 125.
Response	Thank you for your comments, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Felicetti, Tony
Comment I-190-1	We need high-speed rail in upstate New York. It will be at economic boom to this area but the trains must run on time!
Response	Thank you for offering your support, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will double the frequency of service to Empire Corridor West and would result in the best overall on-time performance for Amtrak service in 2035.
Commenter	Fennie, Bruce, Bruce Fennie & Associates, Bruce Fennie & Associates
Comment I-191-1	1. RE the Base Alternative of 1.6 million passengers, is that today or in 2035? 2. If 2035 what is the latest year you have that info on?
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. The ridership estimate in the Tier 1 EIS is for future conditions in 2035, which would reflect the growth in the next 20 years. Base year (2009) ridership estimates are approximately 1.3 million and can be found in Chapter 2 and Appendix B.
Commenter	Fennie, Bruce, Bruce Fennie & Associates, Bruce Fennie & Associates
Comment I-191-2	3. How does the 1.6 Million breakdown between: a) NYC-Albany? b) Albany -Buf c) Albany- ROC d) Albany- Syracuse e) NYC-Buf f) NYC-ROC g) NYC-Syracuse 4. If 1.6 million is the 2035 Number how does the latest year you have data for breakdown as described in a-g above?
Response	Thank you for your interest in the High Speed Rail Empire Corridor Program.

For the service between these locations, the 1.6 million riders breaks down as follows; NYC-Albany (570,326), Albany-Buff (12,760), Albany-ROC (12,210), Albany-Syracuse (10,708), NYC-Buff (29,632), NYC-ROC (42,492), and NYC-Syracuse (55,214).

For the base year (2009) data, the 1.3 million riders breaks down as follows; NYC-Albany (542,702), Albany-Buff (10,146), Albany-ROC (10,386), Albany-Syracuse (8,822), NYC-Buff (68,182), NYC-ROC (72,596), NYC-Syracuse (60,734).

Detailed ridership and revenue data is maintained by NYSDOT and Amtrak for the service provided on the Empire Corridor. Current figures for these destinations can be obtained by contacting Amtrak.

Commenter Fennie, Bruce, Bruce Fennie & Associates, Bruce Fennie & Associates

Comment I-191-3 5. Av price of tickets a-g in 2035 and latest year?

Response Thank you. Base year (2009) ticket prices range from \$18 between Utica and Syracuse to \$58 between NYC and Buffalo, as presented in Appendix B of the Tier 1 EIS. The current cost of fares on Amtrak can be found on their website (<http://www.amtrak.com/home>). Ticket prices for the year 2035 are not known at this time, and would be subject to operating costs and assistance from NYSDOT and the federal government at that time.

Commenter Fennie, Bruce, Bruce Fennie & Associates, Bruce Fennie & Associates

Comment I-191-4 1. How much federal and State money has been spent on this project and over how many years?

Response Thank you for your continued interest in the High Speed Rail Empire Corridor Program. In April of 2010, NYSDOT received a \$1 million grant from FRA to conduct analyses of potential Empire Corridor improvements, including preparation of a Service Development Plan, Tiered EIS, and other necessary studies. In addition, Federal Highway Administration (FHWA) contributed \$1.8 million to the Tier 1 EIS preparation, and New York State provided matching funds in the amount of \$3.5 million (New York State rail funds).

Commenter Fennie, Bruce, Bruce Fennie & Associates, Bruce Fennie & Associates

Comment I-191-5 2. The subsidy per passenger (Exhibit ES-4) does not include any imputed interest for the Capital outlays although the taxpayers are paying interest of the Federal debt. Why has interest on the debt / Capital not been included in the Subsidy?

Response Thank you for your comments. There is no interest paid on direct federal capital grants for transportation projects. Moreover, the omission of this cost element, even if it were a true program cost, is consistent for all alternatives such that comparisons of economic performance across alternatives remain valid. Interest on the federal debt is not allocated across all federal grants but rather is a separate payment out of the treasury shown as a budget line item exclusive of federal programs funded with the remaining federal budget. It would therefore be inappropriate to make assumptions as to the appropriate index to assign to each capital dollar expended. For these reasons, the subsidy is calculated only on the gap between annual operating costs and ticket revenues collected by Amtrak.

Commenter Fernandez, Joseph, Licensed Real Estate Broker, CJF Realty, Licensed Real Estate Broker, CJF Realty

Comment I-192-1 If we are to make a massive investment in a new transportation system, then the return should by rights be equally massive. Compared to the alternatives, it should ideally be:

- Safer
- Faster
- Lower cost

- More convenient
- Immune to weather
- Sustainably self-powering
- Resistant to Earthquakes
- Not disruptive to those along the route

Response Thank you for your comment on the High Speed Rail Empire Corridor Program. Economic costs and benefits of each alternative for the program have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B would double the service frequency along Empire Corridor West and would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered. It would increase ridership by 1 million over the Base Alternative. The net annual operational benefits for the Preferred Alternative would be roughly equivalent to eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.

Commenter **Fernandez, Joseph, Licensed Real Estate Broker, CJF Realty, Licensed Real Estate Broker, CJF Realty**

Comment I-192-2 The Hyperloop (or something similar) is, in my opinion, the right solution for the specific case of high traffic city pairs that are less than about 1500 km or 900 miles apart. Around that inflection point, I suspect that supersonic air travel ends up being faster and cheaper. With a high enough altitude and the right geometry, the sonic boom noise on the ground would be no louder than current airliners, so that isn't a showstopper. Also, a quiet supersonic plane immediately solves every long distance city pair without the need for a vast new worldwide infrastructure.

Response Thank you for your interest in the High Speed Rail Empire Corridor Program. In selecting the Preferred Alternative, the FRA and NYSDOT focused on technology in the Tier 1 EIS that is compatible with, and will allow connections with, other parts of the national rail network.

Commenter **Fernandez, Joseph, Licensed Real Estate Broker, CJF Realty, Licensed Real Estate Broker, CJF Realty**

Comment I-192-3 Short of figuring out real teleportation, which would of course be awesome (someone please do this), the only option for super fast travel is to build a tube over or under the ground that contains a special environment. This is where things get tricky.

Response Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. Alternative 125 would involve construction of a viaduct on structure in places, but it would involve considerable costs and impacts (to 2,000 to 3,000 acres of land). It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter	Fernandez, Joseph, Licensed Real Estate Broker, CJF Realty, Licensed Real Estate Broker, CJF Realty
Comment I-192-4	I believe that New York State should be the first state to consider other modes of transportation not just rail. One mode proposed is Evacuated Tube Transport Technologies (www.et3.com). Elon Musk of Tesla Motors, SpaceX, etc., has proposed a similar system called Hyperloop. Proponents of both systems are hoping to obtain enough signatures by July, 2014 in the State of California to persuade California's State Legislature to pass a bill allowing for these systems to be built in addition to rail.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. As described in the prior responses, in selecting the Preferred Alternative, the FRA and NYSDOT focused on technology in the Tier 1 EIS that is compatible with, and will allow connections with, other parts of the national rail network. Economic costs and benefits of each program alternative have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Field, Susan
Comment I-193-1	Much needed! Would bring some jobs too!
Response	Thank you for your comments, relating to the support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Filler, Samuel
Comment I-194-1	Based on the current political climate and the state of the budget, I would suggest going after option 90B and pursuing the express track build out as another phase.
Response	Thank you for your comments in support of Alternative 90B, which have been considered by FRA and NYSDOT in the selection of 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, and the Service Development Plan presents the phased implementation of individual projects. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Fisher, Jean
Comment I-195-1	Would love a high speed rail. Pick Alternative 90B
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program, expressing support for Alternative 90B, which has been selected by FRA and NYSDOT as the Preferred Alternative.
Commenter	Fishlock, Frances
Comment I-196-1	I think we should go for the fastest train we can have in Central NY. If we do something less than the best, it will have to be upgraded at a much greater cost in the future.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will reduce travel times between New York City and

	Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Fiutak, Paul
Comment I-197-1	Syracuse's future as a continuing crossroads of transportation for the NE IS AT STAKE.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As noted in the Tier 1 FEIS, Alternative 90B would double the service frequency along Empire Corridor West that includes Syracuse.
Commenter	Fiutak, Paul
Comment I-197-2	Consider future benefits for the limited weather delays benefitting travelers
Response	Thank you for your comments, relating to the support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Flynn, L.R.
Comment I-198-1	High speed rail is not a priority but repairing the State Highway system is.
Response	Thank you for your comments. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities between New York City and Niagara Falls. Consideration of the needs for the interstate highway system was not included in the scope of the program. However, the proposed rail improvements are anticipated to result in a diversion of trips from the highway system, resulting in operational benefits. This annual net benefit (compared to the Base Alternative) would be roughly equivalent to eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year.
Commenter	Foley, John
Comment I-199-1	I strongly support the inclusion of a bike /pedestrian path in any project to Improve the rail line at Livingston avenue.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Folts, James D.
Comment I-200-1	The draft EIS indicates that only the existing station stops between Albany and Niagara Falls would be served by higher-speed trains. I hope that a final plan will propose stations in places like Batavia and Newark.

Response	Thank you for your comments. The Tier 1 EIS is a corridor level evaluation that considers use of the existing stations only. Alignments and rights of way for each of the different alternatives do not include new stations. Additional stations could be addressed in future studies.
Commenter	Folts, James D.
Comment I-200-2	At the Albany public hearing some speakers advocated for a pedestrian walkway across the Livingston Avenue railroad bridge in Albany. I oppose it.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Forbes, Melissa
Comment I-201-1	I think High Speed Rail would be great for NY.
Response	Thank you for your comment supporting the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Forbes, Melissa
Comment I-201-2	Go for it all. We need to get our rail system back in this century enough of band aid fixes.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Fordock, Arleen
Comment I-202-1	I do not want high-speed train; want \$ to go for education of children in NY State.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Fordock, Arleen
Comment I-202-2	Ques: Will the 90 people --attending Wed meeting at DBT Stadium---verify that they or their employees DO currently travel via present train system to NY City? Will they say they avoid the current train at all costs, & travel by AIR instead?
Response	Thank you for your comment on ridership patterns on the High Speed Rail Empire Corridor. A detailed assessment of market demand and projected ridership was completed for each of the alternatives discussed in the Tier 1 EIS. Ridership and revenue performance were important considerations in selecting the Preferred Alternative.
Commenter	Fordock, Arleen

Comment I-202-3	What agency has done a headcount of travelers leaving Syr & unloading themselves at NY City? Will actual survey, via internet or a paper process, accomplish a proper headcount? OR will Gov Cuomo just do a "executive order" and spend the \$ as he/his office sees fit?
Response	Thank you for your questions regarding ridership patterns on the High Speed Rail Empire Corridor. Amtrak monitors the ridership on all trains along the Empire Corridor at each of the stations. Syracuse was the sixth busiest station on the route, behind Penn Station, Albany-Rensselaer, Hudson, Rhinecliff, and Rochester, with over 131,000 riders using the station during fiscal year 2019. Ridership and revenue performance were important considerations in selecting the Preferred Alternative.
Commenter	Fordock, Arleen
Comment I-202-4	what is cost per person IF 90 people per week DO ride the high-speed train AND return to Syr?
Response	Thank you for your question on the cost of ridership on the High Speed Rail Empire Corridor. The current cost of fares on Amtrak can be found on their website (http://www.amtrak.com/home). A detailed assessment of market demand and projected ridership was completed for each of the alternatives discussed in the Tier 1 EIS. The subsidy for the Preferred Alternative (Alternative 90B) would be \$13 per rider, which would be lower than both Alternative 125's subsidy per rider of \$14 and the Base Alternative's subsidy per rider of \$17 per rider. Ridership and revenue performance were important considerations in selecting the Preferred Alternative.
Commenter	Fordock, Arleen
Comment I-202-5	What "high-speed train "contract will be divulged TO the public, reflecting where the funds DO come from?
Response	Thank you for your question regarding the funding for the High Speed Rail Empire Corridor Program. In April of 2010, NYSDOT received a \$1 million grant from FRA to conduct analyses of potential Empire Corridor improvements, including preparation of a Service Development Plan, Tiered EIS, and other necessary studies. In addition, Federal Highway Administration (FHWA) contributed \$1.8 million to the Tier 1 EIS preparation, and New York State provided matching funds in the amount of \$3.5 million (New York State rail funds). Future funding for the program has not been determined at this time. The program costs, schedule, and implementation were considered by the FRA and NYSDOT in selecting the Preferred Alternative, and the implementation of service initiatives were investigated in the development of the Service Development Plan.
Commenter	Fordock, Arleen
Comment I-202-6	Need a public referendum on this item? As per Charter of NY State? The general fund would or would not be providing \$ for the development of this train? What %? If yes, then it would detract from the education of the children in NY State; i.e., less would be funded for schools and universities(including lowering of funds for BOCES/for SUNY/for other educational items).
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered as part of the review process for the Tier 1 EIS. The program is supported by both the Federal Railroad Administration and the New York State Department of Transportation and would be subject to the funding requirements of both the federal and state governments.
Commenter	Fordock, Arleen
Comment I-202-7	TO have a high-speed train that carries merchandise/tractor trailers/cattle/food/any merchandise as well as people, is or is not the purpose??

Response	Thank you for your comment on the HSR Empire Corridor Program. The purpose of program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. The service being considered is focused on trains that carry passengers and associated luggage. The alternatives discussed in the Tier 1 EIS do not consider trains that mix freight and passengers on the same train. An evaluation of how each alternative impacts both freight and passenger rail operations has been considered by the FRA and NYSDOT as part of the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail.
Commenter	Fordock, Arleen
Comment I-202-8	TEST runs, during beginning development, would number over 30 to ensure safety checks were documented? Engine fires possible? Batteries, lithium or other style? Backup personnel on train at all times for safety of passengers, from beginning to end? ALL rails weather-checked during periods of time, & "spot-checks" as required by some NYS "safety board"?
Response	Thank you for your comments on the importance of safety in the implementation of the High Speed Rail Empire Corridor Program. As part of the implementation of any HSR project, a comprehensive safety program would be followed, along with the familiarization of staff and employees with the new features of the service.
Commenter	Fordock, Arleen
Comment I-202-9	IS train wholly owned by investors, by corporation, by??
Response	Thank you for your question on ownership of passenger trains in New York State. Currently, the intercity passenger service along the Empire Corridor is a partnership between the New York State Department of Transportation and Amtrak, which operates the trains and owns many of the stations, tracks, and rolling stock. CSXT also owns a substantial length of the Empire Corridor tracks.
Commenter	Fordock, Arleen
Comment I-202-10	EMPLOYEES of this NY State-authorized train would be hired under civil service laws of NYS??
Response	Thank you for your question regarding the employees operating the intercity passenger trains along the Empire Corridor. These employees are employed by Amtrak, a company owned by the federal government. The Amtrak employees and other railroads employees are subject to the Railway Labor Act and are considered employees of a private company.
Commenter	Fordock, Arleen
Comment I-202-11	THIS railroad, statistics/income/outgo/accident reports etc., would be added to duties of State Comptroller?
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Intercity passenger service along the Empire Corridor is a partnership between the New York State Department of Transportation and Amtrak, who operates the trains and owns many of the stations, tracks and rolling stock. CSX also owns a substantial length of the Empire Corridor tracks. The responsibility for safety and administration of the Empire Service operations would be with the owners and operators.
Commenter	Fordock, Arleen

Comment I-202-12	Security along the route would be provided by NYS Troopers and Homeland Security & Border Patrol?
Response	Thank you for your question regarding security on the High Speed Rail Empire Corridor Program. Currently, safety and security of the right of way along the Empire Corridor is administered by the CSX Transportation Police Department, an accredited law enforcement agency, with the officers carrying the same legal powers as the New York State Police. In other areas, the right of way is protected by the Metropolitan Transportation Authority (MTA) Police, who provide protection on Metro North, and the Amtrak Police Department. These railroad police departments fully cooperate and team with the New York State Police, or other local law enforcement agencies, to investigate issues and incidents along the various railroad right of ways in New York State. In some cases, the Department of Homeland Security screens passengers boarding Amtrak trains, or partner with MTA Police or Amtrak police in monitoring train stations and terminals in New York City. The United States Border Patrol also regularly conducts reviews of passengers on trains along the Empire Corridor, based on the route's close proximity to the Canadian Border.
Commenter	Fordock, Arleen
Comment I-202-13	IF carrying all sorts of categories, including military, then a fee per pound or tonnage or tanker fee would be assessed and earn money for NYS coffers?? AND would there be less items put onto AMTRAK and other railroad companies and then put them out of business?? Trucking companies would lose business? FedEx and UPS would lose business?
Response	Thank you for your comment on the HSR Empire Corridor Program. The purpose of program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. The service being considered is focused on trains that carry passengers and associated luggage. The alternatives discussed in the Tier 1 EIS do not consider trains that mix freight and passengers on the same train. An evaluation of how each alternative impacts both freight and passenger operations has been considered by the FRA and NYSDOT as part of the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail.
Commenter	Fordock, Arleen
Comment I-202-14	WHEN a hazardous chemical as well as people are ON the high-speed train cars or ramps, is 100% protection provided (extinguishers or foam automatic dispensers) AND are there firehouses every 30miles or less from the rail "stations" along the length of the route (to handle that hazard or any normal type of emergency)?? Would the "911" system be called for emergencies to people or any hazard or any accident where railroad cars "jump rails" etc.?
Response	Thank you for your comments about emergency services on the High Speed Rail Empire Corridor. Amtrak and CSX Transportation share in ownership and operations of trains on the Empire Corridor. They have a rigorous program for the safe transportation of different types of fuels and chemicals by rail. This program includes training and communication programs with local fire companies and first responders in the communities traversed by their trains. As the HSR program moves forward, safety and security will be part of the process that will culminate with a safety and security certification, before projects go into revenue service. Emergency coordination between the railroads and the local communities are handled by the railroad dispatcher offices for Amtrak, CSX Transportation and the other railroad companies that have frequent reviews of response protocols and communication links.
Commenter	Fordock, Arleen

Comment I-202-15	Cell phones carried (provided by railroad company) used by all railroad employees on each schedule "run" of each high-speed train? What would be digital and/or wireless cost for passenger or employee use items?
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS. Operating costs have been part of the analysis of the different alternatives by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Fordock, Arleen
Comment I-202-16	WHAT legal aspects of contract would protect NY State coffers, from being sued by the owners or operators or investors of this new incorporated entity??
Response	Thank you for your questions on liability and protection of the state. Currently, the program is supported by the NYSDOT and FRA and is subject to all of the rules and policies and protections of both the federal and state governments. As the program moves forward from the planning stage toward revenue operation, full operating plans will be developed.
Commenter	Fordock, Arleen
Comment I-202-17	WHAT official "authority" or "agency" of NY State &/or Federal Agcy would regulate 100% of railroad?
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. Currently, the program is supported by the NYSDOT and FRA. As the program moves forward from the planning stages toward construction and revenue operation, full operating plans will be developed.
Commenter	Freed, Wayne
Comment I-203-1	I would like to support Alternative 125.
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail, which has been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Freed, Wayne
Comment I-203-2	If this alternative is not possible, for any reason in the future, then I would want my second choice to be alternative 110.
Response	Thank you for your comment supporting the 110 Alternative, which has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. The Preferred Alternative, Alternative 90B, was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Freeman, Jeanne A.

Comment I-204-1	I have wondered if they would ever consider putting the “High Speed Rail System” down the middle of the NYS Thruway.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. In Alternative 125, the New York State Thruway was followed between Albany and Schenectady. In other areas, the grades, curvature of the Thruway, and availability of additional property for the high speed rail right of way in some locations, did not support following the highway. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. Alternative 90B would largely follow the existing Empire Corridor and would involve less right-of-way and environmental impacts than Alternative 125, and was also selected for the reasons described in the prior responses.
Commenter	Freeman, Jeanne A.
Comment I-204-2	If this project goes through many MANY ROADS will be closed. This affects our schools, the fire depts. and ambulance.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS evaluates corridor-level service improvements looking at issues including service reliability, service frequency, and train speeds and identifies a Preferred Alternative. Individual projects, or groups of projects, will undergo a second evaluation (Tier 2) to further advance designs for the Preferred Alternative. Further evaluation of the specific related roadway closures and grade crossings will be evaluated in the Tier 2 assessments.
Commenter	French, Joanne
Comment I-205-1	I would LOVE to see the Core Express option implemented.
Response	Thank you for your comments on rail options and support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Early in the alternatives identification process, higher speed (speeds of 160 mph and 220 mph) alternatives were considered, but were deemed both cost-prohibitive and would involve far greater right-of-way and environmental impacts than the Preferred Alternative 90B. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts.
Commenter	Friedman, Jay
Comment I-206-1	The project team has put together an impressive presentation. Glad to attend.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Friedman, Mark
Comment I-207-1	Any opportunity to allow bicycles to travel more safely is extremely important to the citizens of the capital district.

Response	Thank you for your comments concerning the consideration of bicycles in the High Speed Rail evaluation process. Accessibility of bicycles has been considered in design of stations reconstructed or rehabilitated along the route and will continue to be a major consideration for future station planning. Currently, bicycles can be accommodated on the Empire Corridor, but require separate ticketing.
Commenter	Fronckowiak, Paul
Comment I-208-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Fuller, Robert
Comment I-209-1	My comment is that walkers and cyclists should be able to safely use any replacement or restored railroad bridge over the Hudson in Albany.
Response	<p>Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.</p>
Commenter	Fusarelli, Anthony Loreto

Comment I-210-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-208-1.

Commenter Fusarelli, Renee L.

Comment I-211-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-208-1.

Commenter Gaber, Matthew

Comment I-212-1 I made some private and public comments regarding incorporating the Toronto Metropolitan Area into the economic impact analysis and if that could possibly bring some of those omitted very high speed options back onto the table.
P.S. The busiest border crossing in Northern US is via Buffalo/Niagara Falls @ 13 million individuals entering in 2012.

Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. The scope of the Tier 1 EIS focuses on the Empire Corridor from New York City to Niagara Falls. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto. Passenger forecasts and analyses excluded trips that may have one trip end in Toronto.
Commenter	Gaber, Matthew
Comment I-212-2	I'm actually employed in the rail transit industry. the analysis that was done did not incorporate the Toronto metropolitan area. I just don't understand why that wasn't incorporated into the base analysis and if that would possibly change the -- sort of the options that were laid out and to possibly incorporate even higher speed options.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Currently, the scope of the Tier 1 EIS focuses on the Empire Corridor from New York City to Niagara Falls, New York and passenger forecasts conservatively exclude trips that may have one trip end in Toronto.
Commenter	Gaber, Matthew
Comment I-212-3	The company that I work for, actually, has a land-speed record to have, like, 357 on a test train, about 357 miles per hour. So I mean 125 is -- to me it seems a little bit slow.
Response	Thank you for your comments on the alternatives being evaluated in the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Gaffney, Dennis
Comment I-213-1	What a wonderful legacy it would be to have a bike path across that bridge, linking both sides of the river for cyclists and walkers.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Gale, Peter
Comment I-214-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Gallagher, Kevin**

Comment I am in support of the highest speed passenger rail system possible.
I-215-1

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. In selecting Alternative 90B, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Comments from the public have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter **Gallagher, Kevin**

Comment I believe connections between regions are extremely valuable to system success. In order to be complete, the New York State Plan must coordinate with these other organizations and include connections to Cleveland, Toronto, Montreal and Boston. That is, contingent connection routes to these other areas must be included within this plan for future implementation.
I-215-2

Response Thank you for your comment in pointing out the need to consider connections to areas outside of the Empire Corridor. Currently, the High Speed Rail Empire Corridor Program focuses on improvements between New York City and Niagara Falls. The Tier 1 EIS addresses Amtrak connections regionally to other destinations (including Boston, Toronto, and Montreal), and improvements to Empire Service will benefit travel on these regional

lines. Comments from the public, for improvements to the service, have been considered by the FRA and NYSDOT in the development of the Service Development Plan and the selection of the Preferred Alternative.

Commenter **Gallagher, Kevin**

Comment I-215-3 Consider stations that balance serving a population center and maintaining system speed.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS is a corridor level evaluation that considers use of the existing stations only. One of the advantages of the Preferred Alternative, Alternative 90B, is that it maintains and improves service to existing stations (unlike Alternative 125, for which express service would bypass certain cities along Empire Corridor West). The inclusion of additional stations along the Empire Corridor could be part of future studies for expanding service.

Commenter **Gallagher, Kevin**

Comment I-215-4 The term "High Speed Rail" has not been legally defined and its use is misleading. In the 1903's there were trains in the US with peak speeds between 95 and 115 mph. It is my opinion that the term should not be used for anything under 105 MPH. To avoid misleading the public, I ask that a different term, such as medium or improved speed rail, be used from now on for the slower options.

Response Thank you for your comment on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter **Gallagher, Kevin**

Comment I-215-5 To the best of my knowledge, there are 4 rail routes (active and historic) between Albany and NYC but I see only one path considered for passenger service. Is there an overlooked alternative that would allow greater speeds in that section?

Response Thank you for your interest in the High Speed Rail Empire Corridor Program. The HSR Program outlined in the Tier 1 EIS focuses on improvements and alternatives on or near the current alignment of the rail passenger service between Albany and Niagara Falls, New York. Additional alternatives that were considered and eliminated from further study can be found in Chapter 3 of the Tier 1 EIS. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT, selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts.

Commenter **Gallagher, Kevin**

Comment I-215-6 How will the many at-grade crossings be modified or eliminated (~55 between Buffalo and Syracuse)?

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. Comments from the public, discussing the safety of the operation of the high speed trains for both grade

	crossings and along the right of way, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Gallagher, Kevin
Comment I-215-7	During the building of the NYS Thruway there are associated stories of profiteering, related to acquiring right-of-ways. Will there be any protections made so that legitimate landowners are fairly compensated, the public is not cheated, and other criminal behavior is discouraged, and if necessary, severely prosecuted?
Response	Thank you for your comments about issues regarding the implementation of a high speed rail corridor in New York State. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and property impacts. During Tier 2 assessments, refinements in design will include efforts to avoid and minimize impacts on adjoining buildings and properties. As the program moves forward, the contracts and construction would be subject to the laws and regulations of the federal government and the State of New York.
Commenter	Gallagher, Kevin
Comment I-215-8	will passenger service adversely effect freight service, or reduce future freight capacity potential?
Response	Thank you for your comments, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preservation and the improvement of freight rail traffic to the economy of New York State has been a critical factor in the selection of the Preferred Alternative.
Commenter	Gallagher, Kevin
Comment I-215-9	- Improve the planning process. The process needs empowered citizen representatives. When I say representatives, I don't mean politicians. I mean individual citizens including members of transportation groups. Furthermore this process requires wider inclusion of individuals and companies that have first-hand experience with planning, designing, building and operating true High Speed Rail systems, such as from Europe and Asia. Also, since the plan needs to include connections to other regions, representatives from those regions should be included. - Just as important, the decision process must include the same type of citizen representatives.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The program incorporated and actively sought out public involvement and participation in the process. The different avenues of public outreach can be found in Chapter 7 of the Tier 1 EIS and included, but were not limited to, media outreach, key milestone newsletters, program website, public scoping meetings, and public hearings.
Commenter	Gallagher, Kevin
Comment I-215-10	There seems to be external and internal limitations that have been placed on the scope of the projects. At the very least, the connections to Cleveland, Toronto, Montreal, and Boston need to be available for near future consideration.
Response	Thank you for your comment. The scope of the High Speed Rail Empire Corridor Program focuses on improvements between New York City and Niagara Falls. Amtrak regional lines, such as the Maple Leaf, Lake Shore Limited, and Adirondack Lines provide access and

connections to the cities referenced in your comment. Improvements to Empire Corridor service will improve service on these regional lines. Comments from the public, for improvements to the service, have been considered by the FRA and NYSDOT in the development of the Service Development Plan and the selection of the Preferred Alternative.

Commenter **Gallagher, Kevin**

Comment I-215-11 Rail stations need not be in the city's center to serve regions. However, placing rail stations in the center of cities may interfere with service for the region.

Response Thank you for your comment regarding the location of stations on the Empire Corridor. The Tier 1 EIS is a corridor level evaluation that considers use of the existing stations. The inclusion of additional stations along the Empire Corridor could be part of future studies for expanding service.

Commenter **Gallagher, Kevin**

Comment I-215-12 It is my opinion that the term High Speed Rail should not be used for anything under 105 miles per hour. To avoid misleading the public, I ask that a different term, such as medium or improved speed, be used for these lower speed options.

Response Thank you for your comment regarding the definition of high speed rail. Comments from the public, relating to cost of the different choices and required public investment, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. As presented in the Tier 1 EIS and defined by the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA), "high speed rail corridors" are corridors where trains operating at speeds of 90 mph could be reasonably expected.

Commenter **Gallagher, Kevin**

Comment I-215-13 I have concerns about approximately fifty-five grade crossings between Buffalo and Syracuse, potential interactions between trains, cars, people, ATVs, snowmobiles, wild animals and the environment and the potential for profiteering related to right-of-ways. I'd also need to know that there is not going to be an adverse effect of passenger service on freight service.

Response Thank you for your comments about the grade-crossings along the Empire Corridor. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Chapters 2 and 3 address safety for the existing corridor and the program alternatives.

More detailed design will occur in Tier 2 assessments, and treatments for specific grade crossings could be considered during the development of individual projects designed to implement the Preferred Alternative. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter **Ganjian, Ahmad**

Comment I-216-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Gardner, Diane

Comment I-217-1 I am completely opposed to a new PUBLICLY funded high speed rail service. If there were enough demand for the rail service and it was profitable, the private sector would already be supplying this service.

Response Comments from the public on the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.

Commenter Gataletto, Donna

Comment I-218-1 I am very concerned about the proposed high-speed passenger and freight rail system. The Environmental Impact Statement associated with each proposal does not acknowledge that some of the freight cars will be carrying volatile, crude oil from the Bakken Shale. Both the passenger trains and freight trains would increase speed under at least some of these proposals,

Response Thank you for your comments about rail safety. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Amtrak and CSX Transportation share in ownership and operations of trains on the Empire Corridor. CSX Transportation has a vigorous program for the safe transportation of all different types of fuels and chemicals by rail. This program includes training and communication programs with local fire companies and first responses in the communities traversed by their trains. As the program moves forward, a comprehensive safety and security process will be part of the program that will culminate with a safety and security certification, before the program goes into revenue service.

Commenter Gataletto, Donna

Comment I-218-2 I believe the DOT should evaluate the danger of this kind of plan (given the deadly train explosion in Quebec and other recent derailments) and should upgrade the tankers before putting in this kind of crude substance.

Response	Thank you for your comments. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Geleta, Marion
Comment I-219-1	The High Speed Rail, which would impact my area of residency. Morris Road is highly residential and is located in the Pinebush Preserve. We were looking at alternate route for the RR crossing to go through lands that were donated to the town of Colonie from LIA Auto, these lands would have little impact on the residential and wildlife preserve, I would like to see the plans proposed for the crossing and may I add my comments as to the 1994 committee I attended with DOT on a bus ride with them. Could you please look into what they proposed on the high rise bridge going over Morris Road near the Tire Warehouse and connecting to Central Ave, this was also done on Hamburg Street in Rotterdam to avoid residential concerns and no disruption to the wildlife.
Response	<p>Thank you for your questions about the alternative alignments in the Town of Colonie. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and environmental impacts.</p> <p>Chapters 2 and 3 address safety for the existing corridor and the program alternatives. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. As projects are considered in the Tier 2 assessments for the program, the impact of railroad operations on grade crossings can be reviewed with a focus on promoting safety.</p>
Commenter	Georgi, Ethan
Comment I-220-1	Disappointed to learn that pedestrian and bicycle access to the Livingston Avenue Bridge has been omitted. Communities need this connection for walkable and livable cities. Last year the governments on both sides of the bridge heartily endorsed ped/bike access via the LAB. Now it's gone? We need this.
Response	<p>Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.</p>
Commenter	Geraci, Christine M.
Comment I-221-1	How would this project improve current travel times between Albany and New York City in order to make the train a viable commuter option for people who wish to take advantage of job opportunities in New York City but still live in the Capital Region?
Response	Thank you for your comment. Travel times between New York City and Albany were estimated to be approximately 2:10. The full listing of travel times can be found in Appendix D - Rail Network Operations Simulation, of the Tier 1 EIS.
Commenter	Getz, Orrin

Comment I-222-1	The 110 mph alternative should be selected as the final alternative for the Tier 1 DEIS. This alternative provides the most benefit for the proposed cost of \$6.25 billion. Also, the 110 mph alternative provides the most realistic plan for elements that can be built with a realistic amount of environmental impact.
Response	Thank you for your comment in support of Alternative 110, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.
Commenter	Giannino, Luca, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-223-1	I think that we should have a High Speed Rail because it would be a fast, reliable, efficient, and comfortable for passengers. High Speed Rails would also improve our economic future and environmental future. In conclusion I think that we should have High Speed Rail in New York State.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	DiFiore, Joe
Comment I-224-1	it's a little bit scary some of the options that are listed on here that we're considering, that we're considering anything less than the 125 Option. if you're thinking about anything less than a 125 Option, please just see what else is out there and see that this is really the bare minimum of what we can do and what we really should be doing.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Program. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). One of the drawbacks of Alternative 125 is that express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady.
Commenter	DiFiore, Joe
Comment I-224-2	I run a small B & B here in Rochester. We get travelers from all over the world. I could tell you it's a little bit embarrassing. They use New York City as their major hub for coming in. And when I tell them: Hey, Amtrak is how you're going to get into Rochester. That's your best option. And they look up the time it's going to take them. They're a little -- it's a little -- there's a little disbelief there if they're coming from a country that has real, actual High Speed Rail, or even an efficient rail system.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would also shorten the trip from New York City to Niagara Falls by 1½ hours.
Commenter	Gibbons, Maggie

Comment
I-225-1

As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response

Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Gifford, Gladys

Comment
I-226-1

I am writing in support of the High Speed Rail project in the Empire Corridor. I have been able to view the particulars about the alternatives, and I support the 110 mph alternative. I am opposed to the construction of an alternative right-of-way for the 125 mph version because of its environmental impacts.

Response

Thank you for your comments in support of Alternative 110 for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter Gilchrist, Tim

Comment
I-227-1

It is not clear if it is improving rail for the sake of improving rail or to reduce travel times between city pairs, or to reduce emissions and save fuel.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. It is anticipated that the proposed improvements to the rail service along the Empire Corridor will reduce travel times and will encourage the public to shift from using automobiles. This, in turn, will reduce pollutant emissions and improve New York State's carbon footprint. The net annual operational benefits for the Preferred Alternative would be roughly equivalent to eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year.
Commenter	Gilchrist, Tim
Comment I-227-2	The titles of the Alternatives are misleading. The use of maximum speed does not properly describe the actual speeds or travel times and in the future a better title such as average speed or travel time Albany to Buffalo should be used.
Response	Thank you for your comment. The titles for the alternatives were derived from the engineering standards that would be necessary to support train operations outlined in the particular alternative. Average speed or travel time would vary too greatly depending on the level of physical improvements made to properly represent the name of an alternative.
Commenter	Gilchrist, Tim
Comment I-227-3	With the common infrastructure improvements needed for any of of the 90 alternatives or the 110 alternative calls for the future work to be tiered in a manner which provides incremental benefits. The projects which produce the greatest time savings at the lowest cost should be prioritized and among those projects those that have the greatest chance of success with CSX should be done first.
Response	Thank you for your comments on project prioritization and planning needs. We agree with your assessment, and the phasing of the projects was considered in the development of the Service Development Plan. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Because Alternative 90B is situated largely within the existing right-of-way, it can be constructed in substantially less time than the highest speed alternative (Alternative 125) and will begin to confer benefits within 2 to 5 years after start of construction. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Gilchrist, Tim
Comment I-227-4	The 125 alternative should be dropped from any consideration.
Response	Thank you for your comment concerning the 125 Alternative, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative), in addition to the reasons outlined above.
Commenter	Gilchrist, Tim
Comment I-227-5	Exhibit ES-4 is very misleading, and shares a problem common throughout the DEIS, while the DEIS is focused on the Albany west corridor the statistics and benefits are displayed for the entire corridor.

Response	Thank you for your comment regarding the benefits of each alternative. The High Speed Rail Empire Corridor Program focused on providing improvements to passenger train service along the entire route from New York City to Albany and to Buffalo-Niagara Falls. The Tier 1 EIS studies alternatives that require improvements to both segments of the Empire Corridor, and trains to and from western New York will benefit from improvements to the route between Albany and New York City.
Commenter	Gilchrist, Tim
Comment I-227-6	The benefits such as increased travel time and cost should clearly line out the costs west of Albany.
Response	Thank you for your comments. The benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative, giving consideration to reduced travel times for the portion of Empire Corridor west of Albany. Alternative 90B will provide approximately 370 miles of additional trackage, largely situated along Empire Corridor West, to better segregate passenger and freight traffic. Alternative 90B would double the service frequency along Empire Corridor West and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.
Commenter	Gilchrist, Tim
Comment I-227-7	A true comparison of the benefits of each alternative, would be to calculate the 30 year time savings for passengers from Buffalo, Rochester, Syracuse to Albany or NYC and compare the cost of capital and 30 years of operating expenses.
Response	Thank you for your comments. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program, including analysis of capital, operating, and maintenance costs, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Giles, William
Comment I-228-1	The higher the speed (and thus the shorter the journey) between Buffalo and New York City, the better. So I support Alternative 125.
Response	Thank you for your comments in support of Alternative 125 for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Giles, William
Comment I-228-2	However, regardless of the option chosen, the most crucial element is to consolidate train stations in Western New York, closing Depew and Exchange Street stations in favor of Central Terminal. Central Terminal is a beloved landmark and its location ideal for train service to Chicago, etc.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-

Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Gilrein, John

Comment I support the fastest high speed rail option possible.
I-229-1

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Glende, Amy Marie

Comment As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
I-230-1

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-228-2.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-228-2.
Commenter	Gomez, Larry
Comment I-234-1	I whole hardily support this very important initiative. I think it does not go far enough. We need a rail system that can let people work in NYC area and have people commute from Albany, Utica and Syracuse. There should be branch lines from Watertown, Binghamton etc.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will better serve travelers destined to and from Buffalo and other points along Empire Corridor West by providing more frequent and faster service. Alternative 90B would double the number of trips on Empire Corridor West. Unlike the Alternative 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations.
Commenter	Goodwin, Catherine
Comment I-235-1	I am NOT in favor of this high speed rail because I think the New York State DOT needs to make infrastructure improvements its' TOP priority.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 DEIS.
Commenter	Goodman, Ryan
Comment I-236-1	Having the Buffalo Central Terminal as a part of this is a MUST!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-228-2.
Commenter	Gordon, James
Comment I-237-1	Of these two plans, the 110 plan appears to be the most cost effective. Unfortunately, both of these plans fall short.
Response	Thank you for your comment in support of Alternative 110. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.
Commenter	Gordon, James
Comment I-237-2	I propose connecting these two mega-regions using a different corridor from the proposed Empire corridor. A much more direct route would be considerably shorter than the

proposed Empire corridor. I suggest using the old Delaware-Lackawanna route between New York City and Buffalo, NY, as shown in the map below (map source Wikipedia).

Response Thank you for your comment on the HSR Empire Corridor Program. The program considers improvement alternatives for the Empire Corridor which connects New York City to Albany through the Hudson Valley then west from Albany-Rensselaer to Niagara Falls, through Mohawk Valley, and across Central and Western regions of New York City. Use of the Erie and Lackawanna abandoned right of ways would not follow the areas outlined in the program and does not service the same cities as the Empire Corridor.

Commenter Gordon, James

Comment I-237-3 The Buffalo terminus would be at Buffalo's Central Terminal. This beautiful multi-modal terminal is undergoing renovation and will be ready to handle passengers very soon. It has parking for hundreds of cars. Amtrak's Maple Leaf and Lake Shore Limited lines already go through Central Terminal, although they don't stop there.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Gossett, Linda

Comment I-238-1 I would love to see the Central Terminal in use again for rapid rail transit.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Gough, Eliza J.

Comment I-239-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-237-3.

Commenter Granston, Kareem

Comment I-240-1 I support higher speed rail service along the Empire Corridor.

Response Thank you for your comment in support of the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Grauer, Jon

Comment I-241-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-237-3.

Commenter Gregory, Jr., Thomas P.

Comment I-242-1 My biggest concern that I have noted in oral presentation is that the High Speed Rail proposal NOT be considered independently of the 88\$ increase in freight traffic anticipated by 2035.

Response Thank you for your comment on the High Speed Rail Empire Corridor Program, which has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-

	minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preserving and improving freight rail traffic to the economy of New York State has been an important factor in the selection of the Preferred Alternative.
Commenter	Gregory, Jr., Thomas P.
Comment I-242-2	This further supports having shared track capacity in that a third "shared Track" provides higher efficiencies in transporting not only passengers but also freight.
Response	Thank you for your comment. As outlined above, the Preferred Alternative, Alternative 90B, would provide additional trackage and would improve both passenger and freight rail capacity and operations. The Tier 1 EIS reviews the operation of multiple tracks along the Empire Corridor, including developing specific track diagrams and modeling/simulation of rail operations, to identify the necessary infrastructure projects that will improve travel times and the reliability of service. The public's comments on the program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 DEIS.
Commenter	Gregory, Jr., Thomas P.
Comment I-242-3	New York should develop a third track to increase freight service in conjunction with an increased flexibility for rail planner to allow for additional passenger trains.
Response	Thank you for your comment on freight service operations on the Empire Corridor, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide over 280 miles of third track, largely located within the existing railroad right-of-way to better segregate passenger and freight rail operations. Improvement of passenger rail service while maintaining freight operations along the Empire Corridor is a major goal of the High Speed Rail Empire Corridor Program.
Commenter	Gregory, Jr., Thomas P.
Comment I-242-4	I want future investment in rail funding to be for enhancing Freight rather than passenger service. In addition, should a third rail be developed It should support a gross weight capacity of an estimated 325,000 pounds which I believe is the Industry Standard under adoption. A shared third rail would support an industry reported to employ 175,000 American and that delivers 70% of domestically produced automobiles and coal. Nearly 40% of all freight moves along the rail. The next biggest competitors are Truck and Pipeline. I strongly urge the committee considering this question to develop this corridor to its fullest capacity- but as a corridor for the movement of Freight rather than passengers.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As discussed in the prior responses, the Preferred Alternative would add approximately 370 miles of additional trackage, which would benefit freight operations. This new track, including third track, would be added primarily along Empire Corridor West, where freight operations are heaviest.
Commenter	Gregory, Jr., Thomas P.
Comment I-242-5	The two studies are High Speed Rail in America. It's a 2011 study sponsored by the Rockefeller Institute. And I looked at the other study. It was a National Rail Freight Infrastructure Capacity of Investment Study, which was put together by the Association of American Railroads. In 2035, the American Railway Association says that we will have utilized all of our surplus capacity for moving freight.

I don't support a dedicated rail. And the reason why is because our freight carriers are going to need that capacity.

The Rail Institute in looking at certain aspects they said: Look it, we can't look at trucks anymore because, guess what, that capacity, our road capacity, is almost used up right now. We can't look at airplanes anymore because, guess what, you can't safely increase the number of flights going from here to there. The only thing we have for us now, the only economy scale that we have now, is our rails. Share that rail with CSX. Keep our cost down.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Minimizing interference with freight rail operations was one of the six performance objectives of the High Speed Rail Empire Corridor Program.

Commenter Greiner, Richard

Comment I-243-1 If the State has billions of extra dollars to fund a high speed rail why don't you cut taxes and make the state more business friendly and actually do something that's going to help this State.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 DEIS.

Commenter Grekulak, Stephen

Comment I-244-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including

Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Griehl, Mary

Comment I-245-1 The train at 125 m is a game changer.
With a movie film industry coming to Dewit it could bring people to and from NYC in a day and back extremely important for that type of industry.

Response Thank you for your comments supporting the 125 Alternative, which have been considered in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Guarneri, Joanne

Comment I-246-1 I am sending this as a recommendation that the Empire Corridor Project be developed as quickly as possible.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Gubbins, Barbara

Comment I-247-1 A high speed train would be more convenient!!

Response Thank you for your comment in support of the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Guguentz, Cindy

Comment I-248-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
-The Terminal is centrally located within a two-mile radius of city-center
-The Terminal also has secure parking facilities for up to 450 vehicles
-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-244-1.
Commenter	Guilmette, Lou
Comment I-249-1	Railroad passenger service has been dead since the 1950's, let it rest in peace. The American citizen drives a car, and will continue to drive some sort of similar vehicle forever. We are too independent a society to go back to trains. Trains have a place in local commutes but long distance, not here, not in the US.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 DEIS.
Commenter	Gyurik, Gloria
Comment I-250-1	If the people of the Mohawk Valley will not have access to a CONVENIENT rail service, i.e. Amsterdam or Fonda station, I don't see the necessity for another boondoggle project.
Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative would double the frequency of service to Utica.
Commenter	Hacker, Abby
Comment I-251-1	please do not allow the sncf, the French railway, to build the new high speed rail for new York.
Response	Thank you for your interest in the High Speed Rail Empire Corridor Program. Currently, the project is sponsored by NYSDOT and the Federal Railroad Administration (FRA) and does not include any participation by railroads outside of the United States.
Commenter	Hackett, Alice
Comment I-252-1	I would like to voice my support for the high speed rail service between New York City and Upstate New York.
Response	Thank you for your comment in support of the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Hall, Addie
Comment I-253-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations. We rely on the existing freight rail network for the efficient, reliable and economical transportation of goods.
Response	Thank you for your comments, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative,

Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Improvement of passenger rail service while maintaining freight operations along the Empire Corridor is one of the major goals for the HSR Empire Corridor Program.

Commenter Hall, Addie

Comment I-253-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. As discussed in the prior response, the Preferred Alternative would provide additional sections of third and fourth track to better segregate passenger and freight rail operations. The importance of preserving and improving freight rail traffic to the economy of New York State has been an important factor in the selection of the Preferred Alternative.

Commenter Hall, Jane

Comment I-254-1 I am very much in favor of a dedicated high-speed rail system connecting major upstate cities such as Syracuse with New York City and Niagara Falls.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Hall, Peter

Comment I-255-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-255-1.

Commenter	Hanna, Christopher
Comment I-258-1	I am writing in support of the proposed pedestrian bicycle route on the Livingston ave rail road bridge that is slated to be rebuilt.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Hannon, Don, Hannon Transportation Consulting, Hannon Transportation Consulting
Comment I-259-1	Having worked in NYSDOT for more than 25 years I am well aware of the importance of environmentally sound, economically-wise transportation infrastructure investments. After reviewing all the available information on the High Speed Rail Empire Corridor Program I am in full support of Alternative 110 and commend the Department and all involved in producing such a high-quality, well researched analysis.
Response	Thank you for your comments in support of Alternative 110 and the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Hardy, Joseph
Comment I-260-1	I am writing you in support of the restoration of the pedestrian / bicycle walkway on the planned rebuilding of Albany's Livingston Avenue Railroad.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Harf, Mark
Comment I-261-1	Please do NOT bypass Utica as a stop in any of your high speed rail plans.
Response	Thank you for your comment, relating to preserving and providing train service for the City of Utica, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide improvements in service to currently served cities, such as Utica, and would double the frequency of service. One of the drawbacks of Alternative 125 is that it would bypass cities such as Utica, so express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady.
Commenter	Harner, Janet
Comment	We do not need a new terminal!

I-262-1

Response Thank you for your comment that a new terminal is not needed as part of the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The program focuses on improvements for corridor-level service, and improvements to individual station sites (including at Rochester and Penn stations) have largely been performed as separate, independent projects.

Commenter Harner, Janet

Comment I don't care about the high speed option; just improve upon the existing service and then explore other improvements as ridership increases.
I-262-2

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Harnischfeger, Mark and Monica

Comment We should spend ZERO money on this project.
I-263-1

Response Thank you for your comment, relating to the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Harrington, Bill

Comment From a Buffalo perspective, train travel to Toronto is important (and presently infrequent on both sides of the border). I see that the proposed scope of projects don't address that, but keep in mind that getting to Niagara Falls, NY at the point across the river from the Niagara Falls, Ontario station would be important to provide for easy train travel to Toronto. I understand that the Toronto commuter rail system, GO TRAIN, may in a few years, extend into the Niagara Region so easy travel may eventually be possible if the US connection is done correctly (currently, it does run on summer weekends, albeit not frequently with only a couple trips per day).
I-264-1

Response Thank you for your comments on the need for connections from Niagara Falls to Toronto, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The High Speed Rail Empire Corridor Program focuses on improvements between New York City and Niagara Falls. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto. Further improvements or enhancements to the service can be studied in the future, and operating timetables can be further developed as part of Tier 2 assessments.

Commenter Harrington, Bill

Comment Rochester and Buffalo as essentially one metro area (for professional sports in particular plus more than a few daily commuters from one region into the other). Together, we comprise almost 2.5 Million people, essentially a major US metro area, not fully recognized by marketers and economists. Frequent train travel between the regions would benefit both
I-264-2

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will double the frequency of service along Empire Corridor West servicing the cities of Rochester and Buffalo. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Details on the levels of service that will be provided can be found in the Tier 1 EIS-Appendix D, Rail Network Operations Simulation.

Commenter	Harrington, Bill
Comment I-264-3	Eventually, besides the current proposed line running through Batavia, one should consider a second line extending east from Niagara Falls through Lockport and the other Erie Canal towns.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The current focus of this program is on improving intercity rail passenger service between New York City and Niagara Falls. Improving service to Lockport and the other Erie Canal town areas is not part of this program.
Commenter	Harrington, Bill
Comment I-264-4	Finally, frequent predictable service at 80mph would be good enough and preferred over true high speed rail if enough funds are available for only occasional high speed travel in the corridor.
Response	Thank you for your comment, which has been considered in the selection of Alternative 90B as the Preferred Alternative. As noted in the Tier 1 FEIS, Alternative 90B would double the service frequency along Empire Corridor West and would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered.
Commenter	Harrington, Bill
Comment I-264-5	I would like to add the idea that I think we should start thinking about Buffalo and Rochester as potentially being a single metropolitan area in many respects. We share so many attributes. Our distance seems great at times. There is a lot of space between the two cities, but we're certainly no wider the width of greater Los Angeles which certainly things of itself as a single metropolitan area. We have 2.5 million people roughly between the two regions, major metropolitan area in the United States, and certainly we think of ourselves as a significant metropolitan area for many aspects of our lives, professional sports being perhaps the most one dating, but there are more than a few people that commute between the two areas.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Alternative 90B will double the frequency of service along the portion of Empire Corridor servicing Buffalo and Rochester. Ridership and revenue opportunities were part of the considerations used by the FRA and NYSDOT in selecting the Preferred Alternative for the program. In addition, the Service Development Plan considers service strategies that promote increased ridership of intercity passenger trains along the Empire Corridor.
Commenter	Harrington, Bill
Comment I-264-6	I also think you ought to think about the possibility of rail extending east from Niagara Falls through the canal center, Lockport, Medina, Albion, Spencerport, Brockport. Those towns have stagnated over many decades. Rail connections to Rochester and Buffalo and I think by the way that would include probably a connection from Lockport to Buffalo though I would hope that the local transit system in Buffalo would accommodate that.
Response	Thank you for your comments. The High Speed Rail Empire Corridor Program outlined in the Tier 1 EIS focuses on improvements and alternatives near the current alignment of the rail passenger service between Albany and Niagara Falls, New York. Selection of the Preferred Alternative, by the FRA and NYSDOT, focused on the alternatives servicing Empire Corridor, as outlined in the Tier 1 EIS.
Commenter	Harris, Jason

Comment I-265-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Harris, Louise

Comment I-266-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with

	evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Haun, Mark
Comment I-267-1	Of course travelers would love to get to their destinations in less time. But I fail to understand what sense it makes to spend this amount of money when, except for New York City, there is no practical method of transportation available once the traveler reaches his destination.
Response	Thank you for your comments relating to the accessibility of local transit from the train stations for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Station locations identified in the Tier 1 EIS, in most cases, provide access to the public for both public transit and automobiles.
Commenter	Haynes, Jimmy
Comment I-268-1	Thanks for the improvements and upgrades to help move passengers, business, and commerce in this area.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Healy, Edward J.
Comment I-269-1	I am writing to urge New York State to consider the reuse of the Buffalo Central Terminal as a center for transportation
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Hebert, Austin, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-270-1	I would pick the Alternative 110, as it has the same features as the Base Alternative, 90A, and 90B with 25 miles of new track. The trains, stations, and tracks, all need to be updated. They are old and could cause accidents.
Response	Thank you for your comments supporting the 110 Alternative, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have

	significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Heint, Lucretia W.
Comment I-271-1	4 choices but 110 sounds but we need more service in Utica and Rome. Somehow we have been bypassed. Our station is unique. Don't have to build here. All of our 4 parts have more but I favor Alternative 110.
Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As described in the prior response, Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternatives 110 and 125. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative would double the frequency of service to Utica.
Commenter	Heintzman, Michael
Comment I-272-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-269-1.
Commenter	Herrling, Daniel S.
Comment I-273-1	High Speed Rail, Great Idea...If It Was 1980 A high speed rail sounds great, but the reality is that high speed rail does not mean high speed travel. Most of the proposed options only have an average speed in the mid 50 mph range. None of the travel time from NYC to Niagara Falls is really that impressive, not to mention that most of them are based on express services.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 DEIS. The Preferred Alternative, Alternative 90B, would reduce travel times between New

York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B would double the service frequency along Empire Corridor West and would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered.

Commenter Herrling, Daniel S.

Comment I-273-2 A high speed rail system in NY would still rely heavily on local mass transit options once a traveler gets to the local train station.

Response Thank you for your comments, relating to the accessibility of local transit as part the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Station locations identified in the Tier 1 EIS, in most cases, provide access to the public for both public transit and automobiles.

Commenter Hill, Lauren

Comment I-274-1 The Buffalo Central Terminal is a perfect hub for the high speed rail.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-269-1.

Commenter Hillengas, Paul

Comment I-275-1 Please note my support for the proposed Livingston Ave bridge walkway to be included in plans to replace / update the current Livingston Ave railroad bridge.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Hmiel, Abraham

Comment I-276-1 My comment is twofold: I would like to advocate for the adoption of the maximum-speed and projected ridership plan that uses the existing CSX right-of-way, widening the tracks to as many as would be allowable. I feel that the environmental impact of the 125-plan is too great, while the increase in speed is not worth the effect on New York's ecosystems. Further, I would advocate for the plan that services the most urban areas in central New York. Therefore, I urge the NYSDOT to adopt the 110-plan. My second comment involves the Livingston Ave Bridge between Albany and Rensselaer. I want to urge the NYSDOT and the CSX Corporation to consider a pedestrian and bike path over the Hudson river. Such a right-of-way would improve commerce and mobility of car-free people living in the Albany area and would allow people to experience the natural beauty of the Hudson River.

Response Thank you for your comments supporting the 110 Alternative, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a

modest improvement in overall performance. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative.

Regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York, please refer to the preceding response.

Commenter **Hooven, James**

Comment I-277-1 Alternative 90B with its addition of a third and fourth track and a 1:30 hour reduction in travel time from NYC to Niagara Falls seems to be the most beneficial to the citizens of New York and others who utilize the EC service. However if the \$5.58 billion dollar cost is prohibitive, then Alternative 90A is the next desirable option.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter **Hotra, Michael**

Comment I-278-1 I would urge you to consider carefully the impact of NY state's high speed rail proposals on existing freight rail service, which provides a much needed transportation link in upstate NY.

Response Thank you for your comments on the impacts of the High Speed Rail Empire Corridor Program on freight rail service in New York State, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Howard, Patricia G.**

Comment I-279-1 I am in favor of the proposed high-speed rail in our area.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter **Huang, Jackie**

Comment I-280-1 But in order to reach the balance between costs and products, I am in favor of alternative 90B.

Response Thank you for your comments supporting the 90B Alternative, which have been considered by the FRA and NYSDOT in the selection of 90B as the Preferred Alternative.

Commenter **Huber, Roger**

Comment I-281-1 I am concerned that the proposed high speed rail corridor would negatively affect business operations.

Response Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. In the Tier 1 EIS, Chapters 3 and 4 discuss the positive impacts of the program. More specifically, Section 4.3, Regional Population and Employment, and Business Districts, discusses how

	the program will create employment opportunities and support the labor markets in the regions served by the improved rail service.
Commenter	Huber, Roger
Comment I-281-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. As described above, the Preferred Alternative would provide additional trackage, including large sections of dedicated third and fourth track, to better segregate passenger and freight operations. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preserving and improving freight rail traffic to the economy of New York State has been an important factor in the selection of the Preferred Alternative.
Commenter	Hufnagel, Glenn
Comment I-282-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Hunter, Suzanne
Comment I-283-1	I'm aware that a high speed rail system from Buffalo to NYC is estimated in the area of 16 billion dollars. Well, it would be worth it!

Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Hunters, CS
Comment I-284-1	I am disappointed to find that Buffalo's Central Terminal is not in the High Speed Rail Plan.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-282-1.
Commenter	Hycner, Jim
Comment I-285-1	I totally agree we need to bring hi-speed rail through Buffalo. But we need a stop at the BUFFALO CENTRAL TERMINAL.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-282-1.
Commenter	Ilic, Mila
Comment I-286-1	You need to revisit option 220!! That is the ONLY option that would make a real difference for NY state economy and would offset cost and envr impact by its advantage! Do not waste money and time w/any other options!!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Inglis, Andrew A.
Comment I-287-1	I would strongly support a passenger only high speed rail line from Saratoga County to NY. The terminus for the high speed line should be located in Saratoga County
Response	Currently, the Tier 1 EIS addresses improvements to the service to be operated as part of the High Speed Rail Empire Corridor Program focused between Niagara Falls and New York City. Suggestions and recommendations by the public, for improvements to the service outside of these limits, including service extending to Saratoga Springs, have been considered by the FRA and NYSDOT in the Service Development Plan.
Commenter	Iocco, Joe

Comment I-288-1 The concept is great but the cost is not manageable. It would be best to have a dedicated line for only passenger trains.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. The subsidy for the Preferred Alternative (Alternative 90B) would be \$13 per rider, which would be lower than both Alternative 125's subsidy per rider of \$14 and the Base Alternative's subsidy per rider of \$17 per rider. Chapters 5 and 6 of the Tier 1 EIS describes the costs and benefits of the program alternatives.

Commenter Isserlis, Alan

Comment I-289-1 I would love to go as fast as possible. With a greater travel connect downstate stronger economy will invigorate Upstates economy. The faster the train the greater it Impact.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours.

Commenter Jackson, Lynne

Comment I-290-1 Having a pedestrian and bicycle accommodations on the Livingston Street Bridge would allow me to walk and bike to Rensselaer.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter (No Last Name), Jacob

Comment I-291-1 All NYS high speed rail projects should include the use of the Buffalo central terminal

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Jacobs, Joshua
Comment I-292-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Jacobs, Shari
Comment I-293-1	To restore Central Terminal and bring the rail back would be fantastic.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-291-1.
Commenter	James, Anthony
Comment I-294-1	I fully support moving the Amtrak high-speed rail station from Depew to the Central Terminal in Buffalo.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-291-1. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements.
Commenter	Jamieson, Richard A.
Comment I-295-1	Use surface tracks for freight and an elevate "High Speed" monorail or "hyperloop" for high speed travel.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 DEIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. Alternative 125 would involve construction of a viaduct on structure in places, but it would involve considerable costs and impacts (to 2,000 to 3,000 acres of land). It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Jamison, Ann
Comment I-296-1	Is there a plan to do a health impact statement/analysis with the Gt. Dept. Health Dr. Shah?
Response	<p>Thank you for your comments. The current regulatory review process for the program under NEPA (which also meets the requirements of New York State's SEQRA) involves preparation of a Tiered Environmental Impact Statement, and this Tier 1 EIS addresses corridor-level alternatives and identification of the Preferred Alternative for further definition and evaluation in a Tier 2 assessment.</p> <p>The environmental assessment of the impacts of the program on the passengers and residents along the Empire Corridor has included evaluation of noise and air quality as documented in the Tier 1 EIS. Section 4.19 of the Tier 1 EIS describes the air quality analysis performed, which indicates that no significant adverse air quality impacts are expected. Moreover, with the projected diversion of travelers to rail, the net annual operational benefits for the Preferred Alternative (Alternative 90B) would be roughly equivalent to eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year. Although there are no plans to perform a Health Impact Assessment, it is anticipated that this would have a substantial beneficial effect on public health. Since Alternative 90B would involve adding tracks largely within the existing right-of-way, this would also minimize impacts to adjoining communities and neighborhoods. Individual projects, or groups of projects for the Preferred Alternative, will undergo a second evaluation (Tier 2) to further define and evaluate the impacts of those projects.</p>
Commenter	Jamison, Ann
Comment I-296-2	Please work with Mass. To get high speed to continue on to Boston 9+ hrs. is way too long ever though train more comfortable than driving to Boston.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Currently, the High Speed Rail Empire Corridor Program focuses on improvements between Niagara Falls and New York City. Amtrak service to Boston is provided via the Lake Shore Limited Line. Service to Boston is currently provided by Amtrak over the CSXT's Boston Line and the Massachusetts Bay Transportation Authority's Worcester Line. Improvements on this line could be considered in the future, but requires partnering with Commonwealth of Massachusetts and these host railroads. However, the Tier 1 EIS addresses Amtrak connections regionally to other destinations (including Boston), and improvements to Empire Service will benefit travel on these regional lines. Comments from the public, for improvements to the service, have been considered by the FRA and NYSDOT in the development of the Service Development Plan.
Commenter	Jaroszewski, Tracy
Comment I-297-1	This is a great project that could only open the doors to Buffalo even wider. Our Central Terminal is the perfect Hub.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Jenkins, Edward
Comment I-298-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. In the Tier 1 EIS, Chapters 3 and 4 discuss the positive impacts of the program. More specifically, Section 4.3, Regional Population and Employment, and Business Districts, discusses how the program will create employment opportunities and support the labor markets in the regions served by the improved rail service.
Commenter	Jenkins, Edward
Comment I-298-2	I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations. They also would impede the ability of the freight rail network to keep pace with and serve the needs of a growing upstate economy.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. As described above, the Preferred Alternative would provide additional trackage, including large sections of dedicated third and fourth track, to better segregate passenger and freight operations. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preserving and improving freight rail traffic to the economy of New York State has been an important factor in the selection of the Preferred Alternative.
Commenter	Jenkins, Edward
Comment I-298-3	I urge the state to maintain current freight service and the capacity for growth by selecting the base alternative.
Response	Thank you for your comments on freight service operations on the Empire Corridor, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. As noted in the prior responses, the addition of dedicated third and fourth tracks along Empire Corridor where freight operations are heaviest will represent an improvement in freight operations, compared to the Base Alternative.
Commenter	Jennings, Susan Sturman, General Counsel and Senior Vice President, Conifer Realty, LLC, General Counsel and Senior Vice President, Conifer Realty, LLC
Comment I-299-1	I whole-heartedly support this project
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Jesaitis, Amy
Comment I-300-1	I am writing to urge you to include a path on the Livingston Ave railroad bridge for pedestrians and bicyclists
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	(No Last Name), Johnny
Comment I-301-1	It's the common sense to make central terminal the train stop because it's in the city parameter unlike depew.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-297-1.
Commenter	Johns, Christopher
Comment I-302-1	I'm in support for a high speed train from Albany to New York City.

Response	Thank you for your comments in support of the the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Johnson, Jeffrey
Comment I-303-1	Why are we trying to spend money on something that's not broken.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Johnson, Kristen
Comment I-304-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	<p>Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.</p>
Commenter	Johnson, William
Comment I-305-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. In the

Tier 1 EIS, Chapters 3 and 4 discuss the positive impacts of the program. More specifically, Section 4.3, Regional Population and Employment, and Business Districts discusses how the program will create employment opportunities and support the labor markets in the regions served by the improved rail service.

Commenter Johnson, William

Comment I-305-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. As described above, the Preferred Alternative would provide additional trackage, including large sections of dedicated third and fourth track, to better segregate passenger and freight operations. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preservation and the improvement of freight rail traffic to the economy of New York State has been a critical factor in the selection of the Preferred Alternative.

Commenter Johnston, Deanna

Comment I-306-1 ultra high speed rail is not as necessary as DEPENDABLE service.

Response Thank you for your comments, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and would double the frequency of service along Empire Corridor West.

Commenter Jouret-Epstein, Ellen

Comment I-307-1 So you would expect that I would be totally in support of high speed rail. I am, in theory, but I am also primarily concerned for the development and protection of our more immediate area. The best way to achieve economic development, and to preserve and promote our more rural way of life here in the Hudson Valley will be to build high speed rail, but not on the existing tracks. This should be incorporated into the Thruway system with all new infrastructure.

Response Thank you for your comment on the High Speed Rail Empire Corridor Program. In developing the alignment of the different alternatives, consideration was given to those that would support the most favorable conditions for achieving the operating goals. In 125 Alternative, the New York State Thruway was followed between Albany and Schenectady. In other areas, the grades, curvature of the Thruway, and availability of additional property for the high speed rail right of way in some locations, did not support following the highway. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. Alternative 90B would largely follow the existing Empire Corridor and would involve less right-of-way and environmental impacts than Alternative 125, and was also selected for the reasons described in the prior responses.

Commenter Judd, Mark S.

Comment I-308-1 we need to go directly to 220MPH HSR,

Response Thank you for your comment on the need for trains to operate at higher speeds than being considered in the different alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced, in part because they would bypass all but four of the existing stations along Empire Corridor West. Moreover, it was determined that operating trains at these higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate than the Preferred Alternative. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Judd, Mark S.

Comment I-308-2 My company, Comfort Care, takes care of elderly people and they shouldn't be driving and I don't plan on driving when I'm eighty.
on an Amtrak you keep having to ask the conductor when you need to get off. And then he's got to point where the door is: It's three cars down that way and get up maybe in fifteen minutes unless we stop again on the track.
So on a German train, let's say you're scheduled to ride to Kaiserslautern at 10:07.
at 10:06 your iPhone goes off to alert you to the fact that you're arriving at the station and now you have sixty seconds to get up and grab your luggage off the overhead compartment and walk to the door. You walk to any door, any door near you -- they all open -- and then get off.
The large train stations, like Mannheim and Frankfurt and Kaiserslautern, the train stops for a hundred and sixty seconds. And in the smaller stations, like the sizes of Newark maybe and Geneva, they would stop for sixty seconds.
They're electric trains though.

Response Thank you for your comments on improvements to the service, which have been considered in the development of the Service Development Plan for the High Speed Rail Empire Corridor Program. Operating schedules for service for the Preferred Alternative will be further refined in Tier 2 assessments.

Commenter Judd, Mark S.

Comment I-308-3 I was going to be for the 125 miles per hour. Actually, thirty years ago when I went over there I joined GESPA and I wrote Louise Slaughter a whole bunch of letters about getting 125-miles-per-hour trains here. And now here we are thirty years later deciding to put in a 125-miles-an-hour train when it should be 220.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was also determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). Comments from the public relating to the different service alternatives have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Kaczynski, Jeremy M.

Comment I-309-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Kahkejian, Deborah

Comment I-310-1 I would like to see high speed rail so rail passengers can travel in a timely fashion.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West.

Commenter Kahn, Joanne, 21st Century Park on the Outer Harbor Inc., 21st Century Park on the Outer Harbor Inc.

Comment I-311-1 My vote is for the fastest connection possible between NYC and Buffalo.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In addition to improving the reliability and frequency of service, as noted in the previous response, Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours.

Commenter Kaplowe, Stephen

Comment I-312-1	Please add my voice in support of pedestrian and bicycle access to and across the new bridge, when constructed. This would be a natural extension to the Mohawk-Hudson bike/Hike Trail already so popular. It would be a practical and progressive thing to do
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Karas, Alex
Comment I-313-1	I highly support the 125mph alternative.
Response	Thank you for your comment supporting the 125 Alternative, which has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 would create a dedicated, 2-track passenger right-of-way over much of the Empire Corridor and was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Kawa, Michelle
Comment I-314-1	It would be absolutely wonderful, community enhancing and a much deserved reward for the Central Terminal and all its restorations and hard work to be part of this rail project.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-309-1.
Commenter	Keady, Kathleen A., Office Manager, Gardner Plus Architects, PLLC, Office Manager, Gardner Plus Architects, PLLC
Comment I-315-1	I am in full support of this-faster trains.
Response	Thank you for comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In addition to improving the reliability and frequency of service, Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours.
Commenter	Kerrigan, Scott
Comment I-316-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-309-1.

Commenter Ketola, George

Comment I-317-1 Do not build a train for which there can be no economic pay back. I do not think it can possibly be a good investment of the money proposed.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. A report prepared by the U.S. Conference of Mayors projects that incremental speed improvements (79 to 90 mph) and more frequent service (32 roundtrips from NYC to Albany) could result in an addition of approximately 3,184 jobs in 2035 in the Capital District/Albany region alone. This report also forecasts increases in 2035 of sales output in the Capital District alone of \$357.9 million per year and increases in 2035 wages of \$158.7 million per year. Economic costs and benefits of each alternative have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.

Commenter Kimball, Hubert D.

Comment I-318-1 In my opinion the only way NYS could have true and safe high speed rail is for the trains to have their own dedicated tracks not used by any other trains.
 My conclusion is that this idea will neither be safe nor economically feasible and that time and money should not be wasted on it.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, the majority of which consists of dedicated third track. Chapters 2 and 3 address safety for the existing corridor and the program alternatives, and Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.

Commenter Kinder, Drew

Comment I-319-1 I wouldn't bother with anything other than the 125 alternative.

Response Thank you for your comment supporting the Alternative 125, which has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter King, Derek

Comment I-320-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter King, Jessica

Comment I think this is a great idea!!
I-321-1

Response Thank you for your comment in support of the High Speed Rail Empire Corridor Program, which has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Kirkendall, Scott

Comment consider the BUFFALO CENTRAL TERMINAL IN BUFFALO NY as one of the station stops.
I-322-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-320-1.

Commenter Klatt, Bonnie

Comment As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
I-323-1

-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.

-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

-The Terminal is centrally located within a two-mile radius of city-center

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-320-1.

Commenter Klion, Bruce

Comment I-325-1 I just want to go on record as being a strong supporter of high speed passenger rail service for NY extending to Western New York.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Klug, Judith

Comment I-326-1 The Central Terminal in Buffalo is an important historical landmark which would benefit greatly if a High Speed Rail system were to be put in place along the New York rail corridor

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-320-1.
Commenter	Koch, Frances
Comment I-327-1	We really need this in Buffalo so we can make use of our beautiful Central Terminal that is in process of renovations.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-320-1.
Commenter	Kompinski, CS
Comment I-328-1	If this is a 20 year project - 110 or 125MPH is 1990's technology. If we are going to invest in High Speed Rail - make it High Speed - 200+ MPH or what's the point?
Response	Thank you for your comment concerning train technologies considered in the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Kompinski, CS
Comment I-328-2	Leverage the existing central terminal in Buffalo as a HS rail station.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-320-1.
Commenter	Konder, George C.
Comment I-329-1	I am writing in strong support of the proposed high-speed rail system for the Empire Corridor from Albany to Niagara Falls, New York.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Konder, George C.
Comment I-329-2	While I would hope for the fastest speed possible, plan Alternative 125 (mph) at \$14.71 billion is also the costliest. The second fastest speed appears to be far less costly, Alternative Plan 110 (mph), at \$6.25 billion, and makes more sense financially in exchange for a reduction of only 15 mph in speed

Response	Thank you for your comments from the public, relating to either Alternative 125 or 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Kontrabecki, James
Comment I-330-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-320-1.
Commenter	Koplik, Mark
Comment I-331-1	I would like to express support for adding pedestrian and bicycle access to the Livingston Avenue Bridge Replacement Project.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website: www.dot.ny.gov/livingstonavebridge .
Commenter	Kostran, Jan
Comment I-332-1	With an affordable and viable option like high speed rail I have no doubt countless New Yorkers will take advantage of this opportunity especially if promoted wisely and aggressively. Count me among those who will.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Kozaczka, Stanley J.

Comment I-333-1	I am in favor of the 110 mph alternative.
Response	Thank you for your comments in support of Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Kozaczka, Stanley J.
Comment I-333-2	new routes to serve the Southern Tier ought to be considered with trains eventually going from Syracuse to Binghamton and to Scranton and New York City.
Response	Thank you for your comment on the HSR Empire Corridor Program. The program considers improvement alternatives for the Empire Corridor between New York City and Albany and Albany to Niagara Falls. Additional routes out of this corridor are not being considered at this time as part of the program.
Commenter	Kraska, Robert
Comment I-334-1	I believe the central terminal, located in buffalo New York should definitely be in all future plans for high speed rail projects.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Kratz, Josh
Comment I-335-1	I highly advise going with the full 125mph high speed rail option.
Response	Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Krekeler, Paul
Comment I-336-1	I encourage the NYSDOT to include bike/ped access on the Livingston Ave bridge. Doing so will make crossing the Hudson River more accessible and multimodal.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website: www.dot.ny.gov/livingstonavebridge.

Commenter Kruzynski, Mari-Beth

Comment I-337-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-334-1.

Commenter Kurtik, Edward

Comment I-338-1 There is a need for High Speed Rail to reduce travel time and high way congestion. Plans 90A,90B and 110 all have advantages, limiting factor would be funding. It would be necessary to insure that local Public Transportation would be available to transport passengers to the High Speed Rail stations.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. In the Tier 2 assessments, individual projects or groups of projects will be further advanced in terms of costs, scheduling, and funding, according to the Service Development Plan. For station projects, opportunities for multimodal connectivity can be pursued with the local municipality and transit provider. Station locations identified in the Tier 1 EIS, in most cases, provide access to the public for both public transit and automobiles.

Commenter Kurtik, Elizabeth

Comment I-339-1 HIGH SPEED RAIL EMPIRE CORRIDOR PROGRAM High Speed Rail will enhance the economy of the United States beginning with the corridor from New York City to Niagara Falls, New York, and someday the rest of the country. The reasons for doing this are as follows :
 • Faster travel by people on business or pleasure trips should mean more decisions to go by train rather than airplane. Air travel has become cumbersome and unreliable.

- CSX and others have a stake. If freight can be moved by rail rather than by trucks, it would decrease air pollution, decrease the number of trucks on the roads, and make the roads safer.
- If people are moved by rail rather than by car, it would also decrease air pollution, mean fewer automobiles on roads, and safer roads.
- It would decrease the pounding that roads get, have a longer life and reduce costs to maintain

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Kurtik, Elizabeth

Comment I-339-2 Although there are considerable cost differences among the Base Alternative and the other four proposals, the Base Alternative does not appear to accomplish the desired increase in speed. Alternatives 90A, 90B, or 110 have better cost/benefit ratio(s). Alternative 125 would be the highest speed but the cost jumps considerably high.

Response Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS. The return on investment for the program and other costs have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Kurya, Jamie

Comment I-340-1 I like the 125 alternative, would have wanted a higher option but understand cost issues.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Kustyn, David M.

Comment I-341-1 I AM FAVOR HIGH SPEED RAIL.

Response Thank you for your comments supporting high speed rail, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Lacari, Mark

Comment I-342-1 After reading the DEIS from the New York State DOT, it should be clear to do a 110mph Service for Amtrak.

Response Thank you for your comments in support of Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly

	higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Lacari, Mark
Comment I-342-2	it should be in the best interest to go for the 110mph High Speed Rail Corridor Plan.
Response	Thank you for your comments relating to Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative, for the reasons outlined above.
Commenter	Lacari, Mark
Comment I-342-3	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-334-1.
Commenter	Lancellotti, Frank
Comment I-343-1	I think spending taxpayer money on high speed rail in N.Y. State is a waste of hard earned & scarce resources.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Langner, Guenther
Comment I-344-1	Q: Grade crossings? Total avoidance joint management of signaling system CSX/Amtrak now/future? In case of the blue track (125) only between Albany/Rensselaer and NY this is ensured.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS, which have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Chapters 2 and 3 address safety for the existing corridor and the program alternatives.
Commenter	Langner, Guenther

Comment I-344-2	Provision of reliable local transportation to and from the railroad station as well as parking facilities (the municipalities's responsibility)
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. In the Tier 2 assessments, individual projects or groups of projects will be advanced in terms of costs, scheduling, and funding, according to the Service Development Plan. For station projects, opportunities for multimodal connectivity can be pursued with the local municipality and transit provider. Station locations identified in the Tier 1 EIS, in most cases, provide access to the public for both public transit and automobiles.
Commenter	Langner, Guenther
Comment I-344-3	Is there a convenient continuation at Niagara Falls to Ontario?
Response	Thank you for your comments on connections from Niagara Falls to Ontario. Currently, the High Speed Rail Empire Corridor Program is focused on improvements between New York City and Niagara Falls. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto/Ontario.
Commenter	Langner, Guenther
Comment I-344-4	Choosing any of the four alternatives (base, 90A, 90B, 110) would very likely preclude that the really attractive choice 125 will ever be realized.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Langone, Louis C.
Comment I-345-1	As much as I would like to see trains and tracks capable of 150+ MPH, I can't help but wonder if it would be feasible to spend 15 or 16 billion to achieve this – and it is questionable as to whether it would bring in the projected revenue.
Response	Thank you for your comments on the alternatives being evaluated in the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Langone, Louis C.
Comment I-345-2	If we can build and maintain tracks to withstand 100-110 MPH – to me that would be a great achievement – fast enough for upstate NY. Our present locomotives are capable of this. Therefore, I favor 90A and modify Alt. 110 to reach at least 100MPH+.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the

Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. The Alternative 90A improvements are incorporated into the Preferred Alternative.

Commenter Lankenau, Susan

Comment I-346-1 I am in favor of Alternative 110. If those improvements are well received and ridership increases Alternative 125 could be instituted. I believe improvements need to focus FIRST on track and trains and LAST on stations.

Response Thank you for your comments in support of Alternatives 110 and 125 and the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative, for the reasons outlined above.

Commenter Lankenau, Susan

Comment I-346-2 I suggest Amtrak keep ticket prices the same during holidays and non-holidays. It is a horrible penalty to charge more for holiday travel times.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program Tier 1 EIS. Ticket revenues and ridership projections were part of the evaluation process for each of the alternatives, and details can be found in Chapters 5 and 6 and Appendix B of the Tier 1 EIS. In Tier 2 assessments, more detailed evaluations regarding the future operation of the Empire Corridor, and revenue policies can be reviewed.

Commenter Lannier, Monica, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-347-1 I believe that the state of NY should invest their money in the 125mph high speed rail for the convince of the people. This rail will stop in Albany, Syracuse, Buffalo and Rochester, these or major cities will make it easier than stopping at many stops for less amounts of people.

Response Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Lasher, Ed

Comment I-348-1 a fast rail system serving this area may be what we need to keep from disappearing from the state map..

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Lashgar, Shaghafegh, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-349-1 I think New York should have High Speed trains.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Lautz, Ellen

Comment I-350-1	Just wanted to add one more vote for high speed rail to Central New York.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Leone, Corey
Comment I-351-1	I am all for any high speed rail project in New York.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Leppere, Barney
Comment I-352-1	Alternative 125 looks like a good rt. Thru. Central NY. We need hi speed rail service.
Response	Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Levy, Josette
Comment I-353-1	The new High Speed Rail system should come to Buffalo, New York. We have a beautiful terminal in the process of coming back to life.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Lewandowski, Karen
Comment I-354-1	This needs to happen! The Central Terminal is an iconic building that is very underutilized and just needs the support of the community and a project such as this to revitalize it and the surrounding community. I support any and all revitalization and reuse of this beautiful place.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central

Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Lewandowski, Nancy J.

Comment I-355-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-353-1.

Commenter Lezynski, Scott

Comment I-356-1 Please consider repurposing the Buffalo Central Terminal as part of the project.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-353-1.

Commenter Lindblad, K.A.

Comment I-357-1 '90A' – Limited Support (go for this if nothing else)
 '90B' – No Support.
 '110' – Full Support – Recommend rolling 90B into this.
 '125' – No Support
 1. Full support of proposal 110. Fallback position being proposal 90A.

Response Thank you for your comments in support of Alternative 110, and Alternative 90A, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Alternative 90A improvements are incorporated into Alternative 90B, which will provide approximately 370 miles of additional trackage to better segregate passenger and freight

	rail. Alternative 90B will provide similar trackage as Alternative 110, only situating more of the improvements within the existing right-of-way.
Commenter	Loeser, Sara
Comment I-358-1	The Buffalo Central Terminal would be the perfect place to connect to high speed rail. Please consider it.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-353-1.
Commenter	Lofaro, Cynthia
Comment I-359-1	My vote is for the 125 mph Option.
Response	Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	LoFaso, Fred
Comment I-360-1	Any new hub if the Buffalo should be located at the Buffalo Central Terminal.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-353-1.
Commenter	Lofft, Patrick M.
Comment I-361-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central

Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-353-1.

Commenter Lombardo, Rosemary

Comment I-362-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-353-1.

Commenter Long, Joseph & Susan

Comment I-363-1 Count us in on improvement of passenger rail service in the Empire Corridor. We don't fly and use the train. Plan #110 looks good

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program and Alternative 110, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Moreover, Alternative 90B would have fewer environmental impacts than Alternative 110.

Commenter Lotto, Peter

Comment I-364-1 I strongly support the Alternative 125 that would bring real speed to the trip.

Response Thank you for your comments, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Loughlin Jr., Tom

Comment I-365-1 Do not pass up the stop at the Gateway to the Adirondacks...Utica

Response Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which has been considered by the FRA and NYSDOT in the selection of

Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative would increase service to Utica (doubling the frequency).

Commenter Loughlin Jr., Tom

Comment I-365-2 Nice new rails, bed improvements , and a decent kick up in speed....not crazy fast ...would be great for all of the state.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Lum, David

Comment I-366-1 What benchmarking structure is in place, and what reports can I view regarding benchmarking efforts with other public people movement efforts?

Response Thank you for your comments on the High Speed Rail Empire Corridor. The Federal Railroad Administration maintains on their website, www.fra.dot.gov, an overview of the different high speed rail projects and initiatives they are supporting throughout the country.

Commenter Lundgren, Faith, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-367-1 The option of the train going 120 mph I think would be very convenient; bringing down travel time by a lot.

Response Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Lupia, Charles

Comment I-368-1 Unlike the Erie Canal, a high-speed train will not transport freight. But my quickly moving CNY people to such cities as NY, it will provide them with economic opportunities. And sooner or later these increased connections should bring opportunities directly to Syracuse, Rochester and Buffalo.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Macdonald, Roderick

Comment I-369-1 I will be your biggest fan of this project. I think it is a great idea on so many levels.

Response Thank you for your comments in the support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Mackiewicz, Cheryl A.

Comment I-370-1 As a supporter and volunteer at the national landmark known as the Buffalo Central Terminal, I would like to voice my support regarding the Terminal's use for future high speed rail, known as the Empire Corridor Project- Tier I EIS. I feel that you should strongly support the inclusion of the Central Terminal facilities in the plans for this project

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Mackiewicz, Cheryl A.

Comment I-370-2 this complex should be part of the future of the Buffalo area for the following reasons: - The Terminal is a point of interest to the tourists who visit Buffalo and New York State because of its architectural design and historical transportation legacy. - The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will create educational opportunities, an active arts center, workforce and economic development and neighborhood reinvestment in the Broadway-Fillmore district of Buffalo, New York; a neighborhood with a rich history of its own. - The Terminal is located within an easy commute to the center of the city. - The Terminal has secure parking facilities for up to 450 vehicles. - The Terminal already has a main concourse for travelers to dine and shop, and with future renovation, will add to the tourist attraction and an economic benefit for entrepreneurship and small business development. - The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies; working with marble, stained glass, and other reconstructive arts, thereby creating a benchmark for historic rehabilitation and restoration. The Terminal is a gem waiting for reuse and would be the perfect facility to incorporate in your plans for high speed rail service. am confident that New York State can promote the reuse of this original and historic building; the Terminal was built to be a center for transportation and this is her- and your- opportunity

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Macri, David

Comment I-371-1 Totally disagree with any of these proposals. Overlaying 'quasi high speed' rail on the existing infrastructure does not provide benefits which outweigh the costs.

Response	Thank you for your comments, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 address benefits and costs of the program alternatives.
Commenter	Ziehm, Linda
Comment I-372-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-370-1.
Commenter	Maderi, Denny
Comment I-373-1	I was wondering why the tube option, proposed for California for high speed rail, has not been considered as a viable options.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Madison, Dale
Comment I-374-1	It will be spectacular if the High Speed project uses Buffalo Central Terminal
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-370-1.
Commenter	Madison, Dale
Comment I-374-2	if Alternate 125 bypasses Rome, Utica and Schenectady, does it also bypass Hudson and Rhinecliff? If upstate cities are bypassed to achieve faster through put, it's only fair to bypass downstate cities for the same reason

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. One of the advantages of Alternative 90B is that it would double the frequency of service to these cities bypassed by Alternative 125. Communities in the Mohawk Valley (Schenectady, Amsterdam, Utica and Rome) would not be served because the route for the 125 Alternative is located south of these communities. South of Albany-Rensselaer, the 125 Alternative would have utilized the existing route, and schedules and stopping patterns for trains would have been developed further in the formulation of the Service Development Plan.
Commenter	Madison, Dale
Comment I-374-3	Reroute CSX out of downtown Rochester and onto the West Shore.
Response	Thank you for your comment regarding train operations in the City of Rochester. The HSR Program outlined in the Tier 1 EIS focuses on improvements and alternatives on or near the current alignment of the rail passenger service between Albany and Niagara Falls, New York. The Tier 1 EIS evaluates the operation of passenger and freight trains along the Empire Corridor, and the Preferred Alternative will add approximately 370 miles of additional trackage, including third and fourth tracks in Rochester, to better segregate passenger and freight rail. Specific projects for the Preferred Alternative will undergo a second evaluation (Tier 2) to further advance design for that project, or group of projects.
Commenter	Madison, Dale
Comment I-374-4	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-370-1.
Commenter	Malecki, Joanne
Comment I-375-1	Please insure that any and all bridge alterations, rebuilds, and/or construction projects include safe walk and bikeways across them.
Response	Thank you for your comments concerning the consideration of bicycles and pedestrians in the High Speed Rail evaluation process. Comments from the public, relating to the

accessibility for bicycles and pedestrians, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Any projects resulting from the Preferred Alternative will undergo a second evaluation (Tier 2), and bicycle and pedestrian accommodations can be further evaluated at that time.

Commenter **Malone, Evelyn**

Comment I-376-1 Such a perfect idea to use this beautiful building to begin to build that area of Buffalo. I would love to ride a train from that station again. Hope the State will be wise enough to grab onto this idea and facility.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Mandanas, Linda**

Comment I-377-1 option 110 makes the most sense to me, best balance between costs and benefits

Response Thank you for your comments in support of Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter **Mantell, Amy**

Comment I-378-1 I support bringing high speed rail to the Empire Corridor and believe it is well worth the investment.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter **Marcus, Aaron**

Comment I-379-1 I live in Vermont, and it is very challenging to get from Vermont to Central and Western New York, ever since Greyhound cut routes about 10 years ago. Improvements to extend the Ethan Allen to Burlington are in sight, but I would really like to see greatly improved on-time performance and frequency of trips, so that it will be easier to transfer to and from Vermont trains in Albany/Schenectady.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Preferred Alternative will improve service along the Empire Corridor, and improvements to Empire Service will benefit travel on connecting regional lines, including connecting trains to Vermont (Ethan Allen Express). The Tier 1 EIS addresses Amtrak connections regionally to other destinations (including Rutland).
Commenter	Marcus, Aaron
Comment I-379-2	Please take the most ambitious alternative fiscally possible, and ridership from Vermonters like me – as well as many Vermont tourists – will follow. I will ride New York trains much more, with a dedicated passenger rail corridor.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Markiewicz, Jacob
Comment I-380-1	The attached editorial dated November 20, 2008 was at the time, what I thought was a good idea. People with other personal agendas put the idea down. Today it's even a better idea. My problem is people are currently talking about this and making people believe it is a new idea and for another area. This should be here in Lake Katrine and Kingston!
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The Tier 1 EIS presents the planning and alternatives analysis that culminated in selection of Alternative 90B as the Preferred Alternative.
Commenter	Martin, April
Comment I-381-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-376-1.
Commenter	Martin, Ben, Communication Manager , CURE International, Communication Manager, CURE International
Comment I-382-1	I am very much in favor of extending high speed service through the Empire Corridor and encourage any efforts to that end.

Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Martin, Sharon
Comment I-383-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Commenter Maurer, Maggie

Comment I-386-1 This would benefit the area greatly and my quality of life! Bravo!

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Maurer, Maggie

Comment I-386-2 I would use a high speed rail system.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter McFarland, Jay

Comment I-387-1 I'd like the high speed rail to have some food service on the train and so they have at least coffee and doughnuts, and then if we have wine and beer from New York State right on the trains, hopefully we'll be able to encourage the people to come on the trains and enjoy them,

Response Thank you for your comments relating to amenities on trains operated in the future. The Tier 1 EIS addresses improvements to the Empire Corridor rail system focusing on train operations and performance. These food and beverage services are provided by the service operator (currently Amtrak). Further definition of the Operating Plan and amenities can be performed in the Tier 2 assessments.

Commenter Maziarczyk, Michael

Comment I-388-1 As a supporter of the National Landmark known as the Buffalo Central Terminal, I would like to take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project ? Tier I EIS.
 This Historic Building should not be forgotten but instead re-used for a valid project.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city

officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Mazura, Christopher

Comment I ask you to prioritize the reestablishment of a bike corridor between Rensselaer and Albany over the replacement Livingston Avenue Bridge.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter McColl, William

Comment Get going on 110 right now.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter McColl, William

Comment Start surveys and possible land acquisitions for 125 ROW.

Response Thank you for your comments, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter McColl, William

Comment Infrastructure project are good for the economy, after maintenance, or course.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter McElduff, Kelsey

Comment Construction of new tracks for "high-speed" trains that don't support high-speed technologies such as magnetic levitation will make it more difficult to construct these tracks for bullet trains when reduction of fossil fuel use becomes crucial in the future

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. In developing the alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor Program, very high speed (VHS) alternatives and alternative technologies were considered, but were not selected in part because they were considered to be cost-prohibitive. In selecting the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT focused on technology that allows connections with other parts of the national rail network.
Commenter	McElduff, Kelsey
Comment I-391-2	Also, the two rejected proposals that operated at much higher speeds were claimed to have more negative environmental impacts. I find this hard to believe with the long-term energy savings that come from operating trains at much higher speeds.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. During the selection of the alternatives for review in the Tier 1 EIS, it was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was also determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate.
Commenter	McElduff, Kelsey
Comment I-391-3	I just want to reiterate what these two gentlemen said about this not really being high speed technically and I just wanted to make a comment that if you already have corridors that you can build on potentially, new corridors on the west, then I would suggest saving those corridors for Maglev trains, instead of constructing the same tracks that we have already and then making it harder to develop in the future faster bullet trains that we are eventually going to need.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. In selecting the Preferred Alternative, the FRA and NYSDOT focused on railroad technology discussed in the Tier 1 EIS that allows connections with other parts of the national rail network, as discussed in the preceding responses.
Commenter	McLaughlin, David
Comment I-392-1	When it comes to the proposed HIGH SPEED RAIL EMPIRE CORRIDOR PROGRAM, I am very opposed to using money that could go to repair roads and bridges used by far more travelers, transit of goods or commuters to employment.
Response	Comments from the public of the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	McLeod, Caitlin
Comment I-393-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-388-1.

Commenter **McMahon, Thomas J.**

Comment I urge you to include the old Central Terminal in Buffalo as the Western New York terminus/station on the high-speed rail link.
 I-394-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-388-1.

Commenter **McNally, Megan**

Comment As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 I-395-1
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-388-1.

Commenter **Mead, Jeffrey**

Comment quicker service can be obtained by expanding track capacity to lessen congestion issues and incremental top speed increases of the trains themselves up to 90-110 mph.
 I-396-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-

	minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered
Commenter	Meara, Thomas
Comment I-397-1	I would be a more frequent user of passenger rail if it would be more frequent and more timely. No need for high rail,
Response	Thank you for your comments on the program, which have been considered in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and would improve the frequency of service along Empire Corridor West.
Commenter	Merriman, Leigh
Comment I-398-1	I think high speed train travel on tracks dedicated only to passenger trains would be wonderful. I support the concept of high speed train travel in New York State.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT. In selecting the Preferred Alternative, which will add additional third and fourth tracks to segregate passenger and freight rail, the focus was on railroad technology discussed in the Tier 1 EIS.
Commenter	Merzbach, Ralph K., Attorney, Merzbach Law Office, P.C., Attorney, Merzbach Law Office, P.C.
Comment I-399-1	I strongly support high speed rail – the faster the better. Let's get moving with Alternative 125 and make reliable and sensible rail transport a reality in this state. The cost is fine with me.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Messere, Fritz
Comment I-400-1	1. To make trains a reliable alternative to air, cost, frequency and times are important considerations. Currently it is not possible to catch a train after 5PM in Syracuse. This is not possible to work for the day in Syracuse and then catch a train to NYC that evening. The same is true if one wants to spend the day in NYC and return to Syracuse in the evening.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered in the development of the Service Development Plan for the High Speed Rail Empire Corridor Program. Operating schedules and timetables will be refined in the Tier 2 assessments.
Commenter	Messere, Fritz
Comment I-400-2	2. Speed is an important consideration. Residents in NYC are more likely to consider spending the a weekend upstate if the necessary infrastructure is available and the time factor is short. So, if I can get to the Adirondacks or Wine Country easily, then weekend excursions are more likely
Response	Thank you for your comments, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative for the High Speed Rail Empire Corridor Program. The Preferred Alternative will improve service along the Empire Corridor, and improvements to

	Empire Service will benefit travel on connecting regional lines, including connecting trains to the Adirondacks (Adirondack Line).
Commenter	Messere, Fritz
Comment I-400-3	3. Upstate medical specialties (Roswell in Buffalo, Children's hospital – Syracuse) could be attractive centers for treatment if there is fast, frequent service.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Mietlicki, James F.
Comment I-401-1	I would first voice full support for the highest available option for the Empire Corridor passenger rail, that being a dedicated high speed passenger line.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Mietlicki, James F.
Comment I-401-2	I would accordingly urge that it is appropriate that the recent resolution of the Buffalo Common Council favoring the reuse of the Buffalo Central Terminal as the high speed passenger rail facility for the area be given full effect in the plan.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-395-1
Commenter	Mietlicki, James F.
Comment I-401-3	Dedicated high speed rail for the Empire Corridor is essential for the ultimate revitalization and growth of the State, in providing efficient and effective transportation between Buffalo-Niagara NYC, and the major populations centers of Rochester, Syracuse and Albany in between, plus the potential of ultimate connection to Hamilton and Toronto.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative will improve service along the Empire Corridor, and improvements to Empire Service will benefit travel on connecting regional lines, including connecting trains to destinations such as Toronto and Hamilton (Maple Leaf Line).
Commenter	Mietlicki, James F.
Comment I-401-4	I would express full support for implementation of the reuse of the Buffalo Central Terminal as high speed rail center for the Buffalo area.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-395-1.
Commenter	Mignogna, James E.

Comment I-402-1	Your ambition to bring high speed rail along this corridor is way too expensive for the benefits it would provide.
Response	Thank you for your comments on of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Miller, Chey
Comment I-403-1	There is no reason to pursue high speed rail in the Empire Corridor; that we can't afford it is good reason not to.
Response	Thank you for your comments on High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Miller, Chey
Comment I-403-2	CSX rules in New York require that the new high-speed rail track be separated by at least thirty feet from freight tracks. This will undoubtedly create instances in which the state will invoke costly eminent domain.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Because of the required property acquisition outlined in your comment, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Miller, Chey
Comment I-403-3	Cost outweighs benefits. In his NY Times article "Running the Numbers on High Speed Trains," Harvard economics professor Edward Glaeser examined cost to benefits. Constructing a hypothetical rail link and plugging in a range of assumptions, he found that costs outweighed benefits in every case. He was forced to conclude, "This is the cruel arithmetic faced by people, like myself, who would love to be pro-rail."
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. A report prepared by the U.S. Conference of Mayors projects that incremental speed improvements (79 to 90 mph) and more frequent service (32 roundtrips from NYC to Albany) could result in an addition of approximately 3,184 jobs in 2035 in the Capital District/Albany region alone. This report also forecasts increases in 2035 of sales output in the Capital District alone of \$357.9 million per year and increases in 2035 wages of \$158.7 million per year. Economic costs and benefits of each alternative have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Miller, Chey
Comment I-403-4	The state is failing to maintain the present transportation system, according to the November 2010 report by then-Lieutenant Governor Richard Ravitch. "New York State currently lacks the revenues necessary to maintain its transportation system in a state of good repair, and the State has no credible strategy for meeting future needs. Simply maintaining the State's existing physical assets will take billions of dollars annually."
Response	Thank you for your comments on the Empire Corridor Program. In developing the program, the program cost and public investment have been considered by the FRA and NYSDOT as part of the selection of the Preferred Alternative.

Commenter	Miller, Chey
Comment I-403-5	Amtrack fares do not cover operating costs. In 2010, Northeastern Amtrak was subsidized between \$32 and \$84 per passenger in its short-distance corridors, it still lost \$1.1 billion in 2008. (Incidentally, the top speed of the proposed high-speed rail line in NY will be 110 mph, and the average speed will be considerably less. Top speed now is 89 mph; billions and billions of dollars for an increase of...31 mph. Does that make any sense?)
Response	Thank you for your comments. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Miller, Chey
Comment I-403-6	Most of the jobs created by the high speed rail project would be union jobs; as Transportation Communications International President Bob Scardelletti boasted in 2010, "No industry is more closely tied to politics than the railroad industry." Draw your own conclusions.
Response	Thank you for your comment concerning job creation for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Miller, Chey
Comment I-403-7	Jobs created by make-work projects deprive the individual taxpayer of the right to use his earnings in a way that makes the best sense for him. The state legislature couldn't possibly know more about how I should use my own money than I do.
Response	Thank you for your comments, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Miller, Chey
Comment I-403-8	For all these reasons, I urge that the proposal for Empire Corridor High Speed Rail Service be scuttled.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Miller, Douglas
Comment I-404-1	I am against the pursuit of high speed rail in New York. I think the money would be better spent on maintenance of existing infrastructure.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Miller, Henry T.
Comment I-405-1	This seems like a tremendous waste of taxpayer (MY) money yet.

Response	Thank you for your comment on the High Speed Rail Empire Corridor Program, which has been considered by the FRA and NYSDOT as part of the review process of the Tier 1 EIS.
Commenter	Miller, Michael J.
Comment I-406-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	<p>Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.</p>
Commenter	Miller, Phillip
Comment I-407-1	I think NYS should seriously consider Buffalo Central Terminal for a high speed rail stop.
Response	<p>Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.</p>
Commenter	Miller, Ted
Comment I-408-1	<p>Many times, automobile travel is a last resort. We can change that. Although 110 mph is not much compared with TGV scheduling 220 mph trains, it is a start. We need dedicated right of way and an approach that would place new stations outside city centers.</p>

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and support for Alternative 110, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125.
Commenter	Miller, Ted
Comment I-408-2	How about a real study of where new rail line right of way could be placed. And while we're at it, let's update the Empire Corridor rolling stock with some new train sets capable of at least 1978 British 125 mph capability!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Tier 1 EIS evaluates the range of alternatives to optimize rail operations along the Empire Corridor. The Preferred Alternative will add approximately 370 miles of additional trackage largely within the existing right-of-way to better segregate passenger and freight rail. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Miller, Ted
Comment I-408-3	Obviously, I'm in favor of better Empire Corridor passenger rail service and "high" speed rail.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Moden, Karen
Comment I-409-1	Buffalo's beautiful and historic Central Terminal is the best choice, by far, for the Empire Corridor Project. Gorgeous, existing landmark building and central location...a no brainer!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-406-1.
Commenter	Moll, William
Comment I-410-1	I support option 90B of the NY State High Speed Rail proposal, with the following comments.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Moll, William

Comment
I-410-2

I have been employed in the rail industry for over 30 years in both freight and passenger capacities, primarily in the transportation / operating departments. About 98% of my time in this industry has been right in New York State as an employee of 4 different railroads, two of which are considered Class 1 carriers, one was a regional carrier and another was a passenger carrier. I am very familiar with the operations of freight and passenger traffic on the Empire Corridor and have, at one time or another, been a train dispatcher on this Corridor from north of Poughkeepsie to Niagara Falls. I support the addition of a third main track. However, I suggest the following. All but one of the passenger stations between CP-169 (Hoffmans, NY) and Buffalo - Depew are located on the south side of the current CSX main tracks (with the exception of Amsterdam) and the major freight yards are all located on the north side of the main tracks. My suggestion is to construct a third main track north of the current track 1 to maximum 79 mph for passenger / 60 mph freight. THEN upgrade the current Track 2 to 90 mph speeds and have the southern most track in this Corridor be the primary passenger track. Using this method would allow CSX and Amtrak to continue their normal course of business during the construction phase and minimize single track operations which cause tremendous traffic backups hindering both freight and passenger operations.

Response

Thank you for your comments on track locations. For Alternative 90B, the new passenger tracks along Empire Corridor West would generally be located on the north side. The line historically operated as a four-track system, and, as part of cost-saving measures that started in the late 1950s, the two tracks that formerly existed on the north side were either removed or converted to sidings to save on maintenance. The new passenger tracks would be added in the former locations of these two tracks.

The primary factors for installing tracks on the north side include the ability to upgrade existing sidings in place to become the third and fourth tracks. The current tracks in operation are on the south side of the right-of-way, and there is availability of right-of-way on the north where this area previously had tracks in operation. Supporting track arrangements and operating diagrams were developed for each of the alternatives in the Tier 1 EIS. The locations for the additional trackage are outlined in Exhibit 3-6 in Tier 1 EIS for the High Speed Rail Empire Corridor Program, and Appendix A presents track schematics. Individual projects, or groups of projects arising out of the Preferred Alternative, will undergo a second evaluation (called Tier 2) to advance the design for that project, or group of projects.

Commenter Moll, William

Comment
I-410-3

About 10 years ago, I was asked by my employer to come up with a list of project I deemed useful for both freight and passenger operations on this corridor. This list was given to NY State but to date, I have not seen any changes made.

Response

Thank you for your comments on the program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The component projects included in Alternative 90B will undergo further evaluation to advance the designs as part of Tier 2 assessments.

Commenter Moll, William

Comment
I-410-4

Add an automatic signal just west of the Utica station where former CP-237 was located until it was removed after a derailment in 1992. Currently, there is a 4 mile block between CP-235 and CP-239 which creates traffic congestion as the next automatic signal east of CP-235 is signal 231, again a long block. Signal spacing is critical to minimize traffic flow problems.

Response

Thank you for your comments. The Preferred Alternative incorporates recommendations from railroad professionals to improve operations along the Empire Corridor and upgrade the infrastructure, which have been evaluated in the Tier 1 EIS for their contribution to

	improving passenger train operations along the route. Individual projects, or groups of projects arising out of the preferred alternative, will undergo a second evaluation (called Tier 2) to further advance the designs for that project, or group of projects.
Commenter	Moll, William
Comment I-410-5	Between CP-286 and CP-290 in Syracuse - Track 7 needs the signal system upgraded to permit bi-directional signaling. Currently it is signaled for westbound moves only. Speeds need to be upgraded on this track to equal what the speeds are on the adjacent Tk 1 and Tk 2 main tracks. Track 8, on the north side of Tk 1 in this same location needs to be signaled and speeds raised.
Response	Thank you for your comments on improvements to Syracuse. Currently, the FRA, NYSDOT, CSX Transportation, and Amtrak are supporting a project, Syracuse Track Configuration and Signal Improvements, that will improve operations throughout this area and create a four track railroad between East Syracuse and the passenger station at CP 290.
Commenter	Moll, William
Comment I-410-6	Bi-directional signals need to be added between CP-8 and CP-17 on the Niagara Branch located between Buffalo and Niagara Falls.
Response	Thank you for your comments. The Preferred Alternative incorporates recommendations from railroad professionals to improve operations along the Empire Corridor and upgrade the infrastructure, which have been evaluated in the Tier 1 EIS for their contribution to improving passenger train operations along the route.
Commenter	Moll, William
Comment I-410-7	Additional trackage needs to be added in the Syracuse, NY area to minimize the congestion in the DeWitt Yard area on the main tracks.
Response	Thank you for your comments for improvements to Syracuse. Currently, the FRA, NYSDOT, CSX Transportation and Amtrak are supporting a project, Syracuse Track Configuration and Signal Improvements, that will improve operations throughout this area and create a four track railroad between East Syracuse and the passenger station at CP 290.
Commenter	Mooney, Mike
Comment I-411-1	High Speed Rail What are we wanting for on this high speed rail. It should have been put in place 20 years ago. Let do it.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Moore, Greg D., CEO, QuiCR, CEO, QuiCR
Comment I-412-1	I echo Mr. Robinson's thoughts on the current proposals reeking of false advertising. They're higher speed rail, but hardly worthy of note. And many sections ALB-BUF should be exploring not 90mph, or even 110mph, but 150mph or 2200mph service. THAT is high speed rail.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options, with trains operating at 90, 110 and 125 miles per hour. It was also determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public

	resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Moore, Greg D., CEO, QuiCR, CEO, QuiCR
Comment I-412-2	Of course the ultimate solution is to extend catenary north so that this section can become a true extension of the NEC much like the Keystone Service to Harrisburg is.
Response	Thank you for your comments on electrification strategies. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT focused on technology in the Tier 1 EIS that is compatible with, and will allow connections with, other parts of the national rail network.
Commenter	Moore, Richard
Comment I-413-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Moore, Scott
Comment I-414-1	<p>As a supporter of high-speed rail, I would love to see Buffalo's Central Terminal reused as a station again.</p> <p>As an architectural gem, it would be a point of pride for Buffalo to see this station back in use for its original purpose. It's location, right along the eastern edge of the city, makes it a convenient spot to bring in trains and send them in different directions without interfering with existing street layouts.</p>

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Moretta, Justin
Comment I-415-1	Buffalo central terminal must be included in these plans.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-413-1.
Commenter	Morgan, Richard
Comment I-416-1	My vote is for the 125 MPH rail Keep the stations to a minimum- Buff, Rochester, Syr,Utica, Maybe Gloversville, Albany and a couple thru the Hudson River area. If you have too many you'll never get to NYC in a reasonable amount of time.
Response	Thank you for your comments from the public, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 would have bypassed stations along the Mohawk Valley, including Rome, Utica, Amsterdam, and Schenectady. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Morris, Andy
Comment I-417-1	I'm writing to urge the incorporation of bicycle/pedestrian access to the repair/replacement of the Livingston Avenue Bridge in Albany.
Response	Thank you for your comments regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Morris, Fallon, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-418-1	I believe that the state of New York should spend their money on the 125 mph High Speed Rail that would stop in all the major cities like Rochester, Albany, Syracuse, and Buffalo for the convenience of their civilian's.
Response	Thank you for your comments in support of Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Mortensen, Annette

Comment I-419-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-413-1.

Commenter Mount, Lee and Elaine

Comment I-420-1 We think that having on time rail service to NYC from Syracuse would be wonderful. Having a track dedicated to passenger service would eliminate the frequent slowing or stops due to freight priority rail usage. It would seem that 110 mile-per-hour would be the best idea.

Response Thank you for your comments in support of Alternative 110 and the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter Mount, Timothy

Comment I-421-1 I support alternative 110. Although I would love to see faster times, alternative 125 does not seem cost effective.

Response Thank you for your comments supporting the 110 Alternative, which have been considered in the selection of Alternative 90B as the Preferred Alternative by the FRA and NYSDOT, for the reasons outlined in the preceding response.

Commenter Murphy, Daniel

Comment I-422-1 I am writing to request that the design and construction of the Livingston Ave Bridge, connecting Albany to Rensselaer, include access for pedestrians and bicycles.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The

Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter **Murphy, John J.**

Comment I-423-1 I feel that the high speed rail in NY State is one of the dumbest things ever.

Response Thank you for your comments, relating to the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter **Namynanik, Mike**

Comment I-424-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-413-1.

Commenter **Nardone, Candice**

Comment I-425-1 Good ideas, update upstate New York. Alt 110 you have to update track 2035 is a long way away. New jobs more business to New York. We should spend the xtra money to improve New York.

Response Thank you for your comments in support of Alternative 110 and the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter **Nassimos, Joe**

Comment I-426-1	I like the idea of High-Speed rail service for Upstate NY, but I think the idea should be kicked up a notch to something more 21st Century style. I suggest Monorail service through Upstate NY from Albany to Buffalo.
Response	Thank you for your comments on the High Speed Rail Empire Corridor. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. Alternative 125 would involve construction of a viaduct on structure in places, but it would involve considerable costs and impacts (to 2,000 to 3,000 acres of land). It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Nedwick, Darlene
Comment I-427-1	I am definitely in favor of high speed rail transportation between Western NY and New York City.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Neffke, Ronald E.
Comment I-428-1	High speed Rail Service is long overdue;
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Neish, Devon, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-429-1	I believe that Alternative 90A would be the best way because of the cheaper cost of the train. Also it would be the best because of how many times the train would be at the station and how fast it goes.
Response	Thank you for your comments in support of Alternative 90A, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will improve the service frequency along Empire Corridor West. The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Nerode, Nathaneal
Comment I-430-1	The Base Alternative is unacceptable; I support any of the alternatives except the Base Alternative, but I would prefer the 110 alternative
Response	Thank you for your comments in support of Alternative 110, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.

	Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Nerode, Nathaneal
Comment I-430-2	The ridership and revenue estimates are too low. It appears that the ridership estimation method assumes that ridership for upstate stations comes only from the surrounding metropolitan areas. This is incorrect. In fact, stations such as Syracuse have passengers who drive from Ithaca (such as myself) or Kingston (I have witnessed this several times) in order to catch trains at the nearest train station.
Response	Thank you for your comments regarding the ridership estimates used in the Tier 1 EIS, which points out that many of the passengers using intercity passenger trains along the Empire Corridor originate beyond the communities where the stations are located. In developing the model used to forecast ridership, the New York City Metropolitan area was deemed an important source of ridership, as many of the riders on the route have their trips linked to either a destination or origination at Penn Station in New York City. The ridership forecast model is based on statewide socioeconomic data and factored in the probability of the passengers from beyond the metropolitan area using the improved rail service. The methodology of the study and the structure of the ridership model, presented in Appendix B, Ridership and Revenue Forecasting, is consistent with the purpose and need of the Tier 1 EIS. The ridership estimates are in line with the different variables being factored into the model.
Commenter	Nerode, Nathaneal
Comment I-430-3	The ridership and revenue study appears not to have considered the ridership from people driving from these more distant points to the upstate train stations.
Response	Thank you for your comments. The methodology for the forecasting is presented in Appendix B, Ridership and Revenue Forecasting. This modeling effort incorporated travel inputs that included automobile travel and major market areas.
Commenter	Nerode, Nathaneal
Comment I-430-4	All designs should include passive provision for future electrification with overhead wires. As a result, what *does* make sense is to do all design to allow for future hanging of overhead wires: this determines overhead clearance of rebuilt bridges or tunnels, spacing between tracks (to allow for poles to carry the overhead wires), design of station platforms (to allow for poles to carry the overhead wires), etc. These passive provisions for overhead electrification should be required as an aspect of all projects built under the auspices of this DEIS. Accordingly, all alternatives except the base alternatives should include, at a conceptual level, passive provision for future overhead electrification at the current world standard of 25kV 60Hz. Unfortunately there is no mention of such provision in the DEIS.
Response	Thank you for your comments concerning electrification strategies on the Empire Corridor. The Tier 1 EIS discusses the types of energy used for trains in Section 4.20. One of the alternatives dismissed from further consideration in the Tier 1 FEIS, Alternative 125, would provide for electric trains between Albany and Buffalo. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance.
Commenter	Nerode, Nathaneal
Comment I-430-5	I support the 110 option because it benefits all the trains running on the corridor at once. But the really important thing is the trains have to run on time.

Response	Thank you for your comments in support of Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Newton, Theresa
Comment I-431-1	Please continue work on this project.
Response	Thank you for your comments supporting high speed rail, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	(No Last Name), Nico
Comment I-432-1	I wonder how this will be paid for, and once the project is completed how will it continue to pay for itself?
Response	Thank you for your comment regarding economic sustainability. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describes the costs and benefits of the program alternatives.
Commenter	Nicolaysen, Bryan
Comment I-433-1	My personal opinion is that the railroad is a good idea but the cheapest option is the one that should be done. The difference between \$290 million and \$14.7 trillion is huge.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Of the three higher speed Build Alternatives (90B, 110 mph and 125 mph) evaluated in the Tier 1 EIS, Alternative 90B would involve the lowest cost (less than half the cost of the most expensive alternative for 125 mph service), while providing the best overall on-time performance and the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Nicolaysen, Bryan
Comment I-433-2	Do you really believe your estimates are correct? So you believe it will be safe for the passengers? Have the tests been completed? I am also not completely for this proposal for the fact that there are other things that the money can be spent on.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Nielson, Eric
Comment I-434-1	I feel that this endeavor will bring a positive impact to the entire state.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter	Nimphius, Donald J.
Comment I-435-1	My understanding is that 110 MPH is the top speed for Class 5 track. Why is the 110 MPH goal not determined by track class? 110 MPH, I believe the top speed for Class 5 track, as a result a determination of a ceiling of 110 may not be as safe as a higher class 6 track would not only provide for safer and higher speed.
Response	Thank you for your comments on the alternatives being evaluated in the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Nimphius, Donald J.
Comment I-435-2	As for equipment tilt technology should provide for future higher speeds.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, relating to the types of equipment to be operated as part of the Empire Corridor High Speed Rail Program. The selection of Alternative 90B as the Preferred Alternative, by the FRA and NYSDOT, considered railroad technology and systems as discussed in the Tier 1 EIS. Electrified dynamic tilt trains were evaluated in Chapter 3 as part of the 160 mph and 220 mph Very High Speed (VHS) alternatives, which were dismissed from further consideration.
Commenter	Nithikasem, Surasit
Comment I-436-1	I think that we should go with the 125 alternative.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Nithikasem, Surasit
Comment I-436-2	We should also have the electrical supply systems to support speeds higher than 125 mph built into the current design of the 125 alternative such as constant tension catenary.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Your suggestion to use electric power for operating the trains would be achieved by Alternative 125, which was dismissed from further consideration in the Tier 1 FEIS. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance.
Commenter	Noblin-Jackson, Lisa A.
Comment I-437-1	Using the railway as a main source of travel throughout New York State is a viable choice for economic renewal, tourist growth and ecological stewardship. Improving the system and continuing to make rail service a priority from Niagara Falls to NYC and all points in between is the best plan this state has had in my lifetime.

Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Nolan, CPA, Rita M.
Comment I-438-1	It is important that pedestrian/cyclist access be included in the design and construction of the new Livingston Avenue Bridge across the Hudson River.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Nordheim, Shirley
Comment I-439-1	My concerns regarding this: 1. Cost? Too expensive (no project finished without cost overruns) 2. Ridership numbers – New York losing population probably need tax-payer subsidies. 3. Impact on communities? 4. Is there a real need for this? (Beyond the temporary construction job).
Response	Thank you for your comment on High Speed Rail Empire Corridor Program. Social, economic, and environmental factors have all been considered by the FRA and NYSDOT in the selection of the Preferred Alternative, as documented in the Tier 1 EIS.
Commenter	Nowak, Elizabeth L.
Comment I-440-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-

	Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Nuzback, Michael
Comment I-441-1	I believe the 110 and 125 alternatives would have the largest positive affect on many of the cities in New York State.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Of the three Build Alternatives (90B, 110 mph and 125 mph) evaluated in the Tier 1 EIS, Alternative 90B would involve the lowest cost (less than half the cost of the most expensive alternative for 125 mph service), while providing the best overall on-time performance.
Commenter	Olds Sr., Dennis F.
Comment I-442-1	I am totally against the Base and 125 proposals because the former is too passive and the latter is too aggressive.
Response	Thank you for your comments relating to alternative preferences for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Olds Sr., Dennis F.
Comment I-442-2	I also reject any proposal that has a significant potential to: -- adversely affect farm land and/or -- bypass Utica's train depot
Response	Thank you for your comments discussing the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would provide 370 miles of additional trackage and would minimize potential impacts on farmlands by adding tracks primarily within the existing right-of-way, as discussed in Section 4.18. In addition, unlike Alternative 125, which would not provide express service to Utica, Alternative 90B would increase the frequency of service to Utica.
Commenter	Olds Sr., Dennis F.
Comment I-442-3	I would vote for Alternative 90A.
Response	Thank you for your comments in support of Alternative 90A and the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90A improvements are incorporated into Alternative 90B, which will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail.
Commenter	Olds Sr., Dennis F.
Comment I-442-4	every effort should be made to utilize the existing right-of-way.
Response	Thank you for your comments. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125.
Commenter	Olexenko, Peter

Comment I-443-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-440-1.

Commenter Zweig, Brian

Comment I-444-1 Please make pedestrian access a priority in the reconstruction of the Livingston Avenue rail bridge that connects Albany and Rensselaer.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Oswald, Sean

Comment I-445-1 Please consider The Central Terminal building in Buffalo NY as a station for the Buffalo Metro area.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-440-1.

Commenter P., Ajay

Comment I-446-1 For 125 mph option

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

	Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Paarlberg, John
Comment I-447-1	A bicycle and pedestrian connection to the Livingston Avenue bridge is a great idea. Long past due!
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Paladino, Scotty
Comment I-448-1	High speed is very nice
Response	Your comment in support of the High Speed Rail Empire Corridor Program has been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Paladino, Scotty
Comment I-448-2	# 1 Eliminate Railroad crossings big problem with on time performance due to accidents. # 2 Security with terrorist and suicides of people. # 3 proper Drainage for track bed like in the MTA ,
Response	Thank you for your comments regarding safety, security and track maintenance, which are addressed in the High Speed Rail Empire Corridor Tier 1 EIS. Chapters 2 and 3 of the Tier 1 EIS address safety, including grade crossings, for the existing corridor and the program alternatives. Security and maintenance functions are the responsibility of the owners and operators of the rail lines. Each of these entities has police forces and maintenance forces that handle these needs. Comments from the public have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Palmer, Ada
Comment I-449-1	Please consider changing at grade crossings to include 4 quadrant crossings for all at grade crossings. Sadly, I have seen drivers cut between crossing gates.
Response	Thank you for your comments on the grade-crossings along the Empire Corridor. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Palmer, Ada
Comment I-449-2	I enjoyed a 50 mile train ride in Japan 2 years ago. I believe it is important to redevelop our railroad system.
Response	Thank you for your comments, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Palmer, Eugene

Comment I-450-1	We don't need high speed rail and additional deficits.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Environmental and economic concerns, operating benefits, capital requirements, and responsiveness to passenger needs have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Palmer, Richard
Comment I-451-1	just get me to NYC at a reasonable hour from Upstate, which can't be done
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Palvino, Jack
Comment I-452-1	There is no reason for expending tax dollars on a service no taxpayers have requested, used in other areas or will use in the future
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Paolini, Edward
Comment I-453-1	With all the problems we have in NY (i.e. high taxes, over regulations, poor schools, government over reach including safe act) the last thing we need is a high speed rail across the state.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Paolini, Margaret A.
Comment I-454-1	we have a wonderful building here in Buffalo- please consider our beautiful terminal and hook Buffalo up!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Paradowski, Mark

Comment I-455-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Parke, Richard
Comment I-456-1	suggest we move slowly on Approval. Would recommend dedicating income from NY fracking towards this project.
Response	Thank you for your comments, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Parker, Christine
Comment I-457-1	The investment of the High Speed Rail is necessary for the state of NY linking Western NY to Long Island will encourage economic development on a grand scale.
Response	Thank you for your comments supporting high speed rail, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Parrotte, Jeffrey M.
Comment I-458-1	I wish to voice my opinion in favor of high speed rail travel across Upstate New York. I am fully in favor of redeveloping a transportation system that allows for 125mph speeds, limited interference from freight and commuter traffic, and redeveloped crossings.
Response	Thank you for your comments, relating to Alternative 125, for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Parsons, W.T.
Comment I-459-1	What assumptions have been made regarding the impact of rising sea level and flood frequency in the Hudson estuary's low lying tracks?
Response	Thank you for your comments concerning the impacts of climate change on rail performance in the lower Hudson Valley. The Tier 1 EIS documents potential program

impacts on climate change and flooding (Sections 4.9 and 4.20). Individual projects, or groups of projects, will undergo a second evaluation (Tier 2) to further advance the design for that project, or group of projects. Further evaluation of the location of tracks and impacts from rising sea level or flood conditions along the Hudson River can be evaluated in the Tier 2 assessments.

It should also be recognized that Metro North Railroad, in the aftermath of Hurricane Sandy, is taking measures to harden their facilities to better meet weather conditions along their portion of the route. Amtrak and NYSDOT are currently working on improving the tracks and signal system on the portion of the route from Poughkeepsie to Albany to improve operations on this portion of the Empire Corridor.

Commenter Patalita, John

Comment I-460-1 The project could be extended to include service across the Niagara Frontier to Toronto, further adding to ridership.

Response Thank you for your comments on the need for connections from Niagara Falls to Toronto. Currently, improvements to the service to be operated as part of the Empire Corridor High Speed Rail project are focused between Niagara Falls and New York City. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto. The Preferred Alternative will improve service along the Empire Corridor, and improvements to Empire Service will benefit travel on connecting regional lines, including connecting trains to destinations such as Toronto and Hamilton (Maple Leaf Line).

Commenter Patierno, Michael

Comment I-461-1 Although this seems like a practical way of transportation I feel that this would not only be impractical but a waste of time and money. The high speed rail system is an outdated form of transportation. This technology has been around for decades and I feel that it would be a great waste of resources.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.

Commenter (No Last Name), Patricia

Comment I-462-1 With more people moving out of the city but yet commuting having only unreliable Amtrak that is prohibitively expensive to the average person or driving 1/2 way to the city to catch Metro North is also a super inconvenience, and archaic. NYS is best poised for rail system more than any other state. Why are we lagging behind? Is some group being paid off?

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.

Commenter Pawenski, Chris

Comment I-463-1 I believe a new single station should be built no matter which Alternative is selected. A station near Buffalo's CBD, such as near Larkinville would enable all train riders to utilize it.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-454-1.

Commenter Pawenski, Chris

Comment I-463-2	The current stations at Exchange St. and in Depew are NOT welcome sites to out of town visitors.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the stations in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Pawensla, Chris
Comment I-464-1	It would be very helpful if the average speed and time to travel were broken down into two phases, 1. Buffalo to Albany and 2. Albany to NYC. This would better illustrate the true/higher average speed to Albany along with the shorter time, and in turn illustrate a better connectivity between the Queen City and the State Capital.
Response	Thank you for your comments, more detailed information on rail operations is presented in Appendix D, Rail Network Operations Simulation.
Commenter	Pawlowski, Lenore
Comment I-465-1	High speed rail sounds great in theory, but it will only reduce the time to travel across the state by only an hour or two over what it now is with Amtrak. When it can get me to NYC from Buffalo in four hours, then I'll support it. Until then, it's not worth putting public money into it.
Response	Thank you for your comments on the Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. In developing the alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor Program, very high speed (VHS) alternatives were considered, but were not selected in part because they were considered to be cost-prohibitive.
Commenter	Pellingra, Justin
Comment I-466-1	Building two alternatives 90A and 125 would have benefits in the near term and long term. The additional cost is about 1 ½ billion. Doing them both at the same time results in long term benefits for people riding in 2035 and short term benefits for people in 5 years, 10 years, etc. as improvements are made. Later when the 2035, 125 project is completed the earlier improvements of 90A project could revert to freight traffic. CSX would at that point have it's own area without passenger lines interfering. They, CSX, would also be able to move faster from these improvements.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Pellman, John
Comment I-467-1	I strongly support the notion of building high-speed rail infrastructure here in New York

Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Pellman, John
Comment I-467-2	From the DEIS report, I would have to rank the plans for building high speed rail as follows (from most desirable to least desirable): 110, 90B, 125, 90A. 110 seems to be the most practical plan in terms of environmental impact and giving us the most bang for our buck.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.
Commenter	Pellman, John
Comment I-467-3	I would like to add to my previous remarks that I would really like to see alternative 125 put into effect
Response	Thank you for your comments in support of the Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Pena, Oscar
Comment I-468-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in

a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Pescrillo, Jordan

Comment I-469-1 I truly believe that a high speed rail could provide jobs and the traffic the East Side needs to revitalize instead of continually “bomb out” neighborhoods.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Peters, Ariel

Comment I-470-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-468-1.

Commenter Peterson, Lorna

Comment I-471-1 Please make NYS economically competitive by adding high speed rail as a transportation choice.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Peterson, Lorna

Comment I-471-2 I am greatly in favor of high speed rail in NYS
 The proposed route from NYC to Niagara Falls is also sensible because it will capture tourism as well as business and education dollars. Niagara Falls as the final destination

would encourage Buffalo and the NFTA to improve transportation between the two cities beyond its current #40 Grand Island bus route.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.

Commenter **Petko, Stephen**

Comment This would be absolutely fantastic.
I-472-1

Response Your comments in support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter **Phillips, Scott**

Comment High Speed Rail to Buffalo? YES! please get this project on the books
I-473-1

Response Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter **Piecuch, Sarah**

Comment I would like to see alternative 110 progressed.
I-474-1

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program and Alternative 110, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.

Commenter **Piecuch, Sarah**

Comment One thing that confused me tonight was why downstate trips increased per alternative at a much higher rate than the upstate lines?
I-474-2

Response Thank you for your comment discussing the frequencies of service on different segments of the Empire Corridor for the different alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor Program. The downstate segment, anchored by the New York Metropolitan Area at its southern tip, is expected to grow much faster than the rest of the state, thereby resulting in more trips. Also, highway congestion in the metropolitan area is expected to worsen, thereby resulting in a higher mode shift to rail. Every incremental improvement in the total run times leads to increased trips between the New York Metropolitan Area and all the other upstate stations, largely because of the socioeconomic projections and expected highway congestion. The trips between the upstate cities do not increase at an equally rapid rate because the population base around the station area is comparatively low and non-congested highways provide an easy mode of transportation thereby resulting in a lower mode shift to rail. Service in the segment of the route between Albany and New York City also accommodates many passengers, who use or will utilize the trains for commuting to their places of employment in New York City. It is also anticipated that improvements in the service in this segment of the corridor, will also encourage other individuals to use the trains for their daily commuting.

Commenter **Pieniazek, Nicholas**

Comment I-475-1	I wonder how this will be paid for, and once the project is completed how will it continue to pay for itself?
Response	Thank you for your comments regarding the implementation of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS. Future funding for the program has not been determined at this time. The program schedule and implementation have been considered in selecting the Preferred Alternative, and the implementation of service initiatives have been investigated in the development of the Service Development Plan. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Plaat, Daniel
Comment I-476-1	Thus I am in favor of the ALt 110; but, should the capital be available Alt 125 is tempting, despite the need to cut a new path for the express line and other causes of higher environmental impact.
Response	Thank you for your comments in support of Alternative 110 and 125 and the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Of the three higher speed Build Alternatives (90B, 110 mph and 125 mph) evaluated in the Tier 1 EIS, Alternative 90B would involve the lowest cost (less than half the cost of the most expensive alternative for 125 mph service), while providing the best overall on-time performance and the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Plaat, Daniel
Comment I-476-2	A comment on the designs of the new stations; though a massive improvement on the existing, don't look like they would be built in 2016-18, but the 1940's.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. In some cases, the station designs need to reflect the historic character of the existing stations, depending on the location. Any individual projects, or groups of projects selected for implementation as part of the Preferred Alternative, will undergo a second evaluation (Tier 2) to further advance the design for that project, or group of projects. Further evaluation of the specific projects and related improvements to stations can be evaluated in Tier 2 or as separate, independent projects.
Commenter	Plaat, Daniel
Comment I-476-3	A comment that the Livingston Ave rail bridge needs to be considered. This is a local matter for me living a mile away and I can't stress enough the need for a bike and pedestrian path on that bridge for better access to the other side of the river.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Plante, Gerald

Comment I-477-1	I wholeheartedly support the DEIS for the Empire Corridor Project.
Response	Your comments in support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Prenty, Noreen
Comment I-478-1	I hope bicycle traffic will be considered when the Livingston Ave railroad bridge plans are completed.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Preske, Carl
Comment I-479-1	The best choice for the cost would be option 110.
Response	Thank you for your comments in support of Alternative 110 and the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.
Commenter	Preske, Carl
Comment I-479-2	Increasing Frequency would be an improvement but not as important as increased speed and shortened travel times.
Response	Thank you for your comments regarding improvements to service frequency, travel times, and speeds for the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, and Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. A comparison of trip times and frequencies are discussed in Chapter 3 of the Tier 1 EIS for the High Speed Rail Empire Corridor Program. In Chapter 6, there is a comparison of the travel times and frequency of service for the different alternatives.
Commenter	Price, Joshua, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-480-1	I feel that the new and improved High Speed rail train is a really good idea. With speeds up to 90 mph is good, for the Emerging High Speed Rail going from 100 to 500 miles people could get there in plenty of time.
Response	Thank you for your comments in support of emerging high speed rail (speeds up to 90 mph) for the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative.
Commenter	Priestley, Robert

Comment I-481-1	I think its great to have the faster trains going to upstate, NY
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Priestley, Robert
Comment I-481-2	would be nice if amtrax had a stion or atleast a pick up point near suffern,ny.
Response	At this time, the High Speed Rail Empire Corridor Program is focused on improving intercity rail passenger service along the Empire Corridor between New York City and Niagara Falls. Amtrak Empire Corridor trains serve stations in Westchester County, at Yonkers and Croton-Harmon, along with Pennsylvania Station in New York City. The inclusion of additional stations along the Empire Corridor could be part of future studies for expanding service.
Commenter	Provino, Paul
Comment I-483-1	I hope that NYS can incorporate Buffalo's central terminal into their plan for high speed rail!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Pucalski, Christopher
Comment I-484-1	High speed rail access to the Falls, and improvement of other rail systems in the Buffalo/Niagara area is the best way to facilitate new passenger rail efficiencies in WNY.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternative 90B will also increase the frequency of service to Buffalo/Niagara Falls.
Commenter	Puckett, Michael
Comment I-485-1	Any and all efforts to make the Capital Region more bike-able should be undertaken. Bike paths along the Livingston Ave Bridge are key to making that happen for those on the east side of the Hudson!

Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Punturiero, Brian
Comment I-486-1	I would love to see a high speed rail stop here in Buffalo.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the need for a station stop in Buffalo, New York. The Preferred Alternative, Alternative 90B, will continue to provide service to existing stations. The focus was on utilizing existing stations along the Empire Corridor including the stations at Buffalo-Depew and Buffalo-Exchange Street.
Commenter	Puritz, Becky
Comment I-487-1	I'd simply like to add my support to bicycle and pedestrian facilities being included in any repairs and development of the Livingston Avenue Bridge in Albany.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Pusateri, Robert G.
Comment I-488-1	I am in favor of the High Speed Rail project.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Putnam, Randal
Comment I-489-1	I am writing in support of a pedestrian and bicycle path on the Livingston Avenue Bridge.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	R., Steve
Comment I-490-1	The % of New Yorkers to utilize this rail system is not worth the time and \$ when the \$ can be used towards Thruway improvements and/or Education.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Environmental and economic concerns, operating benefits, capital requirements, and responsiveness to passenger needs have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Rain, Dan
Comment I-491-1	The Livingston Avenue Bridge Walkway is a critical connection that can be built safely and cost effectively. It has significant support both locally and regionally. I urge the Federal Rail Administration and the New York State Department of Transportation take the necessary steps to make the Walkway a reality for our community!
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Randazzo, Robert
Comment I-492-1	Can you provide a breakdown, by alternative, what this would actually cost each NYS taxpayer? That's what people need to know and understand to support something like this.
Response	Thank you for your comments regarding the implementation of the High Speed Rail Empire Corridor Program. Economic costs and benefits of each alternative have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Tier 1 EIS presents costs by alternative in Chapters 3, 5, and 6. Future funding for the program has not been determined at this time. Ridership and revenue performance have been considered in selecting the Preferred Alternative, and the implementation of service initiatives have been investigated in the development of the Service Development Plan. In the Tier 2 assessments, individual projects or groups of projects will be further advanced in terms of costs, scheduling, and funding, according to the Service Development Plan.
Commenter	Rathbun, Susan
Comment I-493-1	I vote for Alternative 125.
Response	Thank you for your comments in support of Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Rawls, Brittany
Comment I-494-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Reamer, Stephen D.

Comment I-495-1 A maglev train is the only way to go to truly be high speed. I don't see a need for new rights' of way either. Using the land separating the lanes along the national interstate system would not require new easements.

Response Thank you for your comment on the High Speed Rail Empire Corridor Tier 1 DEIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Reamer, Stephen D.

Comment I-495-2 The project estimate costs for this proposal are not realistic.

Response Thank you for your comment. Capital costs for the alternatives being considered in the High Speed Rail Empire Corridor Tier 1 EIS are developed at a high level. The purpose of estimates is to ensure that costs are estimated in consistent terms across the alternatives being evaluated, such that values for each alternative can be reasonably compared. This approach supports rational decision-making by NYSDOT and the public based on common understandings of the likely relative cost of each alternative compared to the others. Details of the development of the cost for each alternative are included in Chapters 3 and 5 and Appendix F of the Tier 1 EIS.

Commenter Rebbear, James

Comment I-496-1	i think the 120 mph is the best option. faster trip to the city.
Response	Thank you for your comments in support of Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Rebmann, Michael
Comment I-497-1	It is my opinion that the Empire Corridor Project is a huge waste of taxpayers' money.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Rebmann, Michael
Comment I-497-2	Bus travel is much more economical. Car travel is much more convenient and flying is much quicker. Instead, the state should consider improving the Thruway and raising the speed limit to at least 80 m.p.h.
Response	Thank you for your comments about the High Speed Rail Empire Corridor Program. At this time, the Tier 1 EIS evaluation focuses on improving intercity rail passenger service along the Empire Corridor between New York City and Niagara Falls. Improving the New York State Thruway is not included in this program. Consideration of the needs for the interstate highway system was not included in the scope of the program. However, the proposed rail improvements are anticipated to result in a diversion of trips from the highway system, resulting in operational benefits. Economic costs and benefits of each alternative, relating to the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Reeher, John
Comment I-498-1	The advantage of high speed rail is "high speed", and while going from 110 to 125 MPH doubles the cost, it also eliminates nearly an hour 1 way in trip time.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125.
Commenter	Reeher, John
Comment I-498-2	At 125 mph, the service is competitive with car and air, but anything slower and I probably won't utilize the service.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Reichmuth, Elaine

Comment I-499-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-494-1.

Commenter Render, Dave

Comment I-500-1 I whole-heartedly support the re-establishing of the pedestrian and bicycle access to the Livingston Avenue bridge.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Rezak, David

Comment I-501-1 We strongly support high speed rail service for Upstate NY! Alternative 110 will boost upstate access the way the Erie Canal did nearly 200 years ago

Response Thank you for your comments in support of the program, and Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.

Commenter Rezak, Linda

Comment I-502-1 We support alternative 110 and will be regular riders to and from Metro NYC. Please move this project forward.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program and Alternative 110, which have been considered by FRA and NYSDOT in the selection of

	Alternative 90B as the Preferred Alternative, for the reasons outlined in the preceding response.
Commenter	Richards, Charles
Comment I-503-1	Let's get this high speed deal going! I'd love to travel by train from Utica to NYC quicker and more often. I'd visit NYC a lot more often. Currently I can drive faster!
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Richardson, David
Comment I-504-1	The information that I have does not mention the economic impact that would result from this project. I suspect that jobs created would be substantial.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Section 4.3, Regional Population and Employment, and Business Districts, discusses how the program will create employment opportunities and support the labor markets in the regions served by the improved rail service. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Richardson, David
Comment I-504-2	The base alternative makes little sense to me as the state would be looking for additional improvements within a few years. 90B appears to be the minimum alternative required to meet ridership needs.
Response	Thank you for your comments in support of Alternative 90B, which have been considered by FRA and NYSDOT in the selection of 90B as the Preferred Alternative.
Commenter	Riley, Jibreel
Comment I-505-1	looking forward to high speed rail to grow the upstate region.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Riley, Jibreel
Comment I-505-2	The high speed I am looking for is more of faster track times, more trains, more availability, and probably just to clear up more track from the freight. I guess both are a win-win situation for passenger rail and freight rail.
Response	Thank you for your comments on the High speed Rail Empire Corridor Program. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Rittenhouse, Maryanne
Comment I-506-1	I think that this is a TREMENDOUS idea.

Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Robe, Susan
Comment I-507-1	As a lifelong resident of New York I feel this project would benefit our state for all age groups.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Roberts, Carol
Comment I-508-1	yes to high speed rail and the faster the better. The cost is well worth it!
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Rodriguez, Eva
Comment I-509-1	I support any improvement to our bridges (especially those whose walkways & bike trails can be improved, or developed)!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Individual projects, or groups of projects, (such as bridge walkways and bike trails) will undergo a second evaluation (Tier 2) to advance the design for that project, or group of projects.
Commenter	Roertgen, Brandon
Comment I-510-1	I support the development of a new express line along the Empire Service Corridor to improve service
Response	Thank you for your comments, which FRA and NYSDOT have considered in the selection of the Preferred Alternative.
Commenter	Rogers, Amanda
Comment I-511-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Rogers, Andy
Comment I-512-1	given the current economic state of NY I believe project level 90A is best as uses much of existing infrastructure - the only drawback would be rerouting of freight at certain locations where traffic highest but still much cheaper than a dedicated line
Response	Thank you for your comment in support of Alternative 90A. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage, located primarily within the existing right-of-way, to better segregate passenger and freight rail. Alternative 90B will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Rogers, Cheryl
Comment I-513-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-511-1.
Commenter	Rogers, John
Comment I-514-1	I am opposed to spending billions for high speed rail.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Rogge, David
Comment I-515-1	Please make use of the historic Buffalo Central Terminal for your high speed rail project in the empire corridor.
Response	The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-511-1.
Commenter	Rohman, Henry Lee
Comment I-516-1	THE WESTERN NEW YORK AREA NEEDS ALL THE HELP IT CAN GET.
Response	Thank you for your comments, relating to the support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Rohman, Henry Lee
Comment I-516-2	I love the railroad and I would ride it my self.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Romanowski, Margaret
Comment I-517-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-511-1.
Commenter	(No Last Name), Ronnie

Comment I-518-1	We need high speed rail in New York.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Root, Chris
Comment I-519-1	From my studying and understanding of the proposed plans, it seems that alternatives 110 and 125 are clearly the best at promoting fast high speed travel between Niagara Falls and NYC.
Response	Thank you for your comments in support of the program, and Alternatives 110 and 125, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125.
Commenter	Root, Chris
Comment I-519-2	One problem that I see with proposal 125 is that it skips many smaller upstate cities
Response	Thank you for your comments about preserving and offering intercity rail passenger service for the City of Utica, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative would increase service to Utica (doubling the frequency).
Commenter	Root, Chris
Comment I-519-3	I feel that the reuse of the Buffalo Central Terminal should be essential to be included in the proposed projects.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Rose, David

Comment I-520-1	If we begin to dream big, and plan around our big dreams, the central terminal could be more than just a mere reuse success story; Buffalo could change the world, again!!!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Rose, Joel S.
Comment I-521-1	I urge you to include Buffalo's Central Terminal in New York's high speed rail system.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-519-3.
Commenter	Rosenberg, Marc
Comment I-522-1	Yes, highest speed rail
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Rosenberg, Nancy
Comment I-523-1	Yes! We definitely need high speed trains! Awesome project! Get it done!!!!
Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Rosenberg, Nancy
Comment I-523-2	Yes! We need "high speed" (fast as possible) rail to NYC from Buffalo... stops need to be a quick turn over and in Niagara Falls, Buffalo, Rochester, Syracuse, Utica, Sch/Albany, Rhinebeck, Poughkeepsie, NYC.
Response	Thank you for your comments supporting the program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative. Alternative 90B will maintain and improve service to existing station stops, and the schedules have been developed in the Service Development Plan to optimize passenger service. Further schedule development will occur as part of the Tier 2 assessments.
Commenter	Rotolo, Tom and Barbara
Comment I-524-1	we don't need to spend money to make the trains travel at a faster speed. We need to upgrade what we already have. It seems the railroads are in neglect. More people are willing to travel by rail than every before. How about putting the capital in the train stations, tracks and railroad cars.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would involve lesser costs and speeds increases

	than Alternatives 110 and 125 and would constrain more of the additional trackage to the existing right-of-way.
Commenter	Roy, Eileen
Comment I-525-1	I'm very interested to see high speed rail become a reality for our State.
Response	Thank you for your comments in support of high speed rail, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Rumril, Peter
Comment I-526-1	Improvements to rail safety upstate is more necessary than improvements in rail speed.
Response	Thank you for expressing your concerns about safety improvements on the Empire Corridor. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. These improvements that will reduce congestion, delays and interference between passenger and freight trains will improve safety. Chapters 2 and 3 address safety for the existing corridor and the program alternatives, and proposed safety and design measures will be further developed in the Tier 2 assessments.
Commenter	Rumril, Peter
Comment I-526-2	Until the ROW is safe, speeds should not be increased.
Response	Thank you for your comments on the importance of safety being a part of the High Speed Rail Empire Corridor Program. As discussed in the previous response, the Preferred Alternative, Alternative 90B, will add additional trackage, the majority of which (over 280 miles) will consist of third dedicated track. This will better segregate passenger and freight rail, which will allow improvements in both rail safety and travel speeds.
Commenter	Rumril, Peter
Comment I-526-3	I believe a better solution would be to work a deal with CSX to acquire the South Shore line as an exclusive passenger line around Rochester. It's shorter and would be a better location for the new station rather than build it in an area frequented by homeless panhandlers and drug dealers.
Response	Thank you for your comment regarding train operations in the City of Rochester. The HSR Program outlined in the Tier 1 EIS focuses on improvements and alternatives on or near the current alignment of the rail passenger service between Albany and Niagara Falls, New York. The Tier 1 EIS evaluates the operation of passenger and freight trains along the Empire Corridor, and the Preferred Alternative will add approximately 370 miles of additional trackage, including third and sections of fourth tracks in Rochester, to better segregate passenger and freight rail. As projects are considered under the Tier 2 assessments for the program, the impact of railroad operations on grade crossing can be reviewed with a focus on promoting safety.
Commenter	(No Last Name), Russ
Comment I-527-1	Central terminal!

Response	The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-519-3.
Commenter	Russell, CPA, Robert
Comment I-528-1	What I want you to understand is that supporting a pedestrian/bicycle walkway on the Livingston Avenue Bridge upgrade/replacement is just one more piece of the puzzle that will allow me to bicycle from my house to work with virtually no conflict with motorized vehicles!
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Sackett, John L.
Comment I-529-1	OLD TECHNOLOGY- WHY NOT USE MAGNETIC OR MONO RAIL TECHNOLOGY
Response	Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 DEIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Sackett, John L.
Comment I-529-2	DISCRIMINATORY- PARTICULARLY THOSE THAT LIVE outside CITIES ! UNLESS elevated transportation SYSTEM IS UTILIZED MOST ROAD CROSSINGS WILL BE ELIMINATED! THAT INVOLVE.S OUR SCHOOLS, OUR FIRE DEPARTMENTS, OUR AMBULANCE SERVICES, OUR CONSIDERABLE FARMERS, AND OF COURSE DISADVANTAGE OF OUR CITIZENS. THE ADDITIONAL MILEAGE ALONE WILL DO more ENVIRONMENTAL DAMAGE THAN THE NEW CONVENTIAL HIGH SPEED RAILROAD WILL PROVIDE !
Response	Thank you for your comments on the Tier 1 EIS. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. The Tier 1 FEIS accounts for several types of fencing and warning systems, and safety features for the Preferred Alternative in Section 3.3.3, under the "Safety" section. Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As projects are considered in the Tier 2 assessments for the program, the impact of railroad operations on grade crossing can be reviewed with a focus on promoting safety.
Commenter	Sadowski, Emily

Comment I-530-1	I feel that the Buffalo Central Terminal reuse should be included in all NYS High Speed Rail project proposals.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Salsburg, Fred
Comment I-531-1	For us, the travel speed of the train is not very important and we don't think that any money should be spent to increase it. Going 20 MPH faster increases the difficulty and danger for very little benefit, when it's going to stop at a station pretty soon. Not much effect on the average speed.
Response	Thank you for your comments, relating to the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Salsburg, Fred
Comment I-531-2	We won't take the train to go west of Buffalo, the schedule for the Chicago train is too inconvenient to leave in the middle of the night and we won't do it.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Currently, improvements to the service to be operated as part of the High Speed Rail Empire Corridor Program are focused between Buffalo/Niagara Falls and New York City.
Commenter	Salsburg, Fred
Comment I-531-3	So, make changes the so the existing trains don't have to stop due to track usage. And put another Chicago train on a schedule 12 hours offset to the one that runs now and you would have us as customers several times a year.
Response	Thank you for your comments, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will maintain and improve service to existing station stops, and the schedules have been developed in the Service Development Plan to optimize rail service. Further schedule development will occur as part of the Tier 2 assessments.
Commenter	Salzyn, John
Comment I-532-1	The Central Terminal in Buffalo, an iconic symbol of rail traffic, would make an excellent spot for a rail stop. I would love to see this beautiful building reused.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central

	Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-530-1.
Commenter	Samson, Joseph
Comment I-533-1	Alternative 125, although having the greatest reduction in travel times does not stop in Utica.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. Alternative 90B was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.
Commenter	Sandberg, Glenn
Comment I-534-1	The planned rebuilding of Albany's Livingston Avenue Railroad Bridge presents a one-time, unique opportunity to restore the pedestrian / bicycle walkway between both sides of the Hudson River.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Santiago, Jennifer
Comment I-535-1	The planned rebuilding of Albany's Livingston Avenue Railroad Bridge presents a one-time, unique opportunity to restore the pedestrian / bicycle walkway between both sides of the Hudson River.

Commenter	Santos, Rob
Comment I-536-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles

-The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-530-1.

Commenter **Savage, Anne**

Comment I am writing to express my strong support for re-establishing pedestrian and cycling access in the construction of the New Livingston Avenue Bridge.

I-537-1 The bridge was originally built as a multi-modal facility, and the benefits of returning it to its original role are noted in several planning documents including the Albany 2030 Comprehensive Plan (2011), the City of Rensselaer Local Waterfront Revitalization Program Update (2011), the Albany Master Bike Plan (2009), the Hudson River Crossing Study (2008), the Tech Valley Trails Regional Trails Plan (2007), the Patroon Creek Greenway Plan (2004), the Rensselaer County Trail from the Livingston Ave. Bridge to the Troy-Menands Bridge (2004), and the Regional Enterprise for a Vital Economy and Sustainable Transportation (REVEST) (1998).

I add my voice to that of the Albany County Legislature, City of Albany Common Council, Rensselaer County legislature, and the City of Rensselaer Common Council. The Hudson River Valley Greenway Council and Conservancy who have all voted to unanimously support the reconstruction of the walkway.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter **Scammell, G.**

Comment Simply no need for anyone to fund this except those who use it.

I-538-1

Response Thank you for your comments, relating to the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter **Scavo, Dominick**

Comment Here we have the chance to get a high speed rails in our community and now if the 125mph rail is chosen it will by pass Utica. Once again the area that time forgot will be forgotten again. I urge you to include Utica nad go with the 110 mph, this is fast enough. It will give the community an opportunity to get on a train and proceed to their destination with no problems. Please do not forget that NANO Utica will be here and wouldn't it be nice if can offer high speed rail service to NYC to the new employees who may want to visit NYC for a day or two instead of traveling to UTICA or ALBANY.

I-539-1

By the way if you have anything to do with it how about passing the Adirondack Railroad extension from Utica to Lake Placid talk about increasing tourism. I am sure the snowmobilers can work out a compromise, we have a lot going for us...MAKE IT HAPPEN.

Response Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Alternative 90B was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.

Commenter Schanne, Joseph

Comment I-540-1 I remember the buffalo terminal as a kid with the big buffalo inside what a solid bldg. with history!!! People would love to see these vacant treasures to make a come back. Please look into using it!!!

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Scheyer, Lawrence W., Attorney at Law, Attorney at Law

Comment I-541-1 any true high speed passenger service we introduce Upstate has got to operate on its own dedicated right of way.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, the majority of which consists of dedicated third track.

Commenter Scheyer, Lawrence W., Attorney at Law, Attorney at Law

Comment I-541-2 Accordingly, I strongly urge you to advocate for the setting aside of existing railroad right of way (and making additional acquisitions, as necessary) that are required for creating a

continuous, dedicated right of way that is needed to support the next generation of truly safe and efficient high speed surface transportation in New York State.

Response Your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program discussing the need for dedicated right-of-way have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, the majority of which consists of dedicated third track. Alternative 90B would constrain more of the additional trackage to the existing right-of-way to minimize the impact on surrounding communities and environment.

Commenter Schmidt, Dawn

Comment I-542-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Buffalo Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-540-1.

Commenter Schou, Bertil

Comment I-543-1 I am writing to support the effort to restore the bicycle and pedestrian access on the Livingston Avenue Bridge when it is rebuilt or replaced.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Schroeder, Tim

Comment I-544-1 I think that the 90B and 110 options seem like very sensible ways to improve both passenger and freight transport.

Response Thank you for your comments, relating to these different alternatives, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and

	would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125.
Commenter	Schroeder, Tim
Comment I-544-2	I am wondering if you had also perhaps considered a "110e" that also would electrify the existing corridor?
Response	Thank you for your comments on the Tier 1 EIS for the High Speed Rail Empire Corridor Program and on electrifying the 110 Alternative. In developing the operating criteria for the different alternatives outlined in the Tier 1 EIS, the focus was to utilize technologies that would be compatible with existing operation and within available project funding. Electrification would require some unique engineering challenges in maintaining the vertical clearances for some of the common trackage with CSX Transportation. Also, the frequency of service with the increase from four to eight round-trips west of Albany would not support the level of investment required to electrify the trackage at this time. Alternative 110 was dismissed from further consideration, based on greater right-of-way impacts, since CSXT would require a 30-foot track offset from freight for trains operating at this speed.
Commenter	Schultz, F. Justin
Comment I-545-1	I feel that the buffalo central terminal should be included for all high speed rail proposals from the New York State DOT
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-540-1.
Commenter	Seefeldt, Joanne
Comment I-546-1	Opening up the Buffalo railroad terminal to high speed rail traffic makes perfect sense. Please consider and support using the old Buffalo railroad terminal through the Empire Corridor Project.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-540-1.
Commenter	Seiders, Daniel
Comment I-547-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development

-The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-540-1.

Commenter Seifritz, Griffin, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-548-1 High Speed Rail will be an important part of society in both the coming years and beyond.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Seifritz, Griffin, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-548-2 The most beneficial alternative is the 125 mph HSR for many reasons.

Response Thank you for your comments in support of Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Seifritz, Griffin, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-548-3 Without high speed rail New York will not be able to grow and prosper to become the society that we want. The shinkansen high speed rail in Japan traveled at speeds of 130 mph, shuttling 100,000 passengers in its first three years of service. There is no reason New York cannot achieve the level of success with our high speed rail.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative, for reasons outlined in the preceding response. Alternative 90B would also result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Semler, Dylan

Comment I-549-1 The alternative with 125 MAS distinguishes itself in the following ways:
 * It is the fastest of the remaining alternatives
 * It is the safest of the remaining alternatives
 * It is the only remaining alternative that calls for powering trainsets via electricity along the majority of the trackway
 * It offers the most viable alternative to air travelers between NYC and upstate cities, helping to relieve the congestion of the NYC area airports
 For the reasons stated above, I strongly support the 125 MAS alternative.

Response Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the

costs for the Preferred Alternative). As described in the preceding response, Alternative 90B would also result in the least freight delays and best overall on-time performance for Amtrak service in 2035 of the alternatives considered.

Commenter Semler, Dylan

Comment I-549-2 Section 2.2.2 discusses the current transportation market in the Empire Corridor. For this discussion, the automobile market was only determined based on trips taken over the New York State Thruway (I-90 and I-87). However, for travel between New York City and the three major upstate markets: Syracuse, Rochester, and Buffalo/Niagara Falls, a rational automobile driver would take a route through the southern tier because it is more direct. Therefore these automobile trips are not accounted for in the data presented in this section. While Appendix B acknowledges the limitations to the methodology for determining automobile trips, it does not state the severity of this limitation. Because the New York State Thruway represents a slower *and* costlier travel route, the data presented in Exhibit 2-11 severely understate the automobile market between New York City and Syracuse, Rochester, and Buffalo. At a minimum, this shortfall should be explicitly stated in Section 2.2.2 as well as the caption to Exhibit 2-11. At best, a proper sampling should be attempted in order to accurately determine this market size. As it stands presently, the data not only useless, but actually misleading. There are other ways in which the market is understated in this section. It does not consider trips that start in the Empire Corridor and terminate just outside the corridor, like Toronto, Boston, New Jersey, or Philadelphia, the latter already having very frequent, high speed rail service. The ramifications of this understatement propagate to the ridership and revenue forecasting.

Response Thank you for your comment. Exhibit 2-11 of the Tier 1 DEIS (Exhibit E-4 of the Tier 1 FEIS) was intended to be a conservative estimate of the automobile market for many of the reasons noted in your comment.

Commenter Semler, Dylan

Comment I-549-3 Has the group considered a 125 MAS alternative where the 4 regional Empire Corridor West trains terminate at Syracuse?

Response Thank you for your comments regarding the Alternative 125, which have been considered in the selection of Alternative 90B as the Preferred Alternative. Chapter 3 of the Tier 1 EIS describes the alternatives considered for further study. Alternative 125 includes service in the Empire Corridor West from Albany to Buffalo, including service through Syracuse.

Commenter Semler, Dylan

Comment I-549-4 Section 3.5 of Appendix B speaks of "Appendix 3". Is this Appendix C?
Section 3.3 of Appendix B should be numbered Section 3.2.2
Section 3.2.1 of Appendix B refers to the "Buffalo-Erie Metropolitan Region" Do you mean Buffalo-Niagara Metropolitan Region?

Response Thank you for your comments. Sections 3.2.1, 3.3, 3.5 of Appendix B the Tier 1 EIS document have been reviewed and revised to clarify these references in the document.

Commenter Sennett, John

Comment I-550-1 I support Alternative 110.

Response Thank you for your comments in support of Alternative 110, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.

Commenter	Sexton, Laura
Comment I-551-1	I am for the 125 alternative.
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail, which has been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Sexton, Luke
Comment I-552-1	Alternative 125 would best suit the needs of New York
Response	Your comments in support of the High Speed Rail Empire Corridor Program, regarding Alternative 125, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative, for the reasons outlined in the preceding response. Alternative 90B would also result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Sexton, Luke
Comment I-552-2	I would like to give my support to the high speed rail systems that have been proposed. At least 100 miles per hour.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125.
Commenter	Shanebrook, Robert
Comment I-553-1	I have used high speed rail several times in Europe and Asia. I do not think it would be a wise use of resources to pursue high speed rail across New York State this at this time.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Shants, Terry
Comment I-554-1	New York State does not need a high speed train. The cost of running and maintaining a high speed train would be astronomical. For scarcely populated upstate New York, the expense of this project would outweigh any benefit the train would provide. No one has mentioned the ticket prices or the cost of upkeep after the initial project is put into place. Many people take a bus to NYC because it is cheaper than taking the current train. A one hour time difference would not make the high speed train a viable option, considering the added expense. When people travel to Buffalo, they want their cars. The American people like their automobiles. New York wants to spend billions for a train while our cities are in financial trouble, roads are crumbling and need to be widened in some places, bridges need repair and schools are failing. Where is the common sense?

Response	Thank you for your comments, relating to the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Shapp, Mark
Comment I-555-1	So has NYStateDOT finally made its peace with a 90mph maximum?
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Shapp, Mark
Comment I-555-2	I would be pleased with reliably being to operate across the state at 79! I would be pleased if funding was available only to re-engineer the railroad for the benefit of CSX and Amtrak with re-configured chokepoints and higher crossover speeds at interlockings.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered in the selection of the Preferred Alternative.
Commenter	Shapp, Mark
Comment I-555-3	And what of the bridge over the Seneca River dry bed out at MP320? Maximum authorized speed over that bridge is, I believe, 40mph. Surely NYStateDOT doesn't want 90mph trains to have to reduce to 40mph at MP320.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Service Development Plan identifies the Seneca River Bridge Replacement to eliminate the speed restriction as a component project. Elimination of segments of the Empire Corridor that slow train movements has been part of the review process by the FRA and NYSDOT in determining the Preferred Alternative. In Tier 2 assessments, individual projects or groups of projects for the Preferred Alternative will undergo a more detailed evaluation to further advance design.
Commenter	Shapp, Mark
Comment I-555-4	And what of Metro North territory from approximately MP46 to POU? Are there plans to expand track capacity there? If not there is going to be congestion and delays trying to add more Amtrak frequencies.
Response	Your comments on the High Speed Rail Empire Corridor Program have been considered in the selection of the Preferred Alternative. Improvements to the Empire Corridor in Metro-North territory were incorporated as part of Alternative 90A, which is part of the Preferred Alternative. The Tier 1 EIS reviews the operation of multiple tracks, including developing specific track diagrams and modeling and simulation of rail operations to identify the necessary infrastructure projects that will improve travel times and the reliability of service. Details on each of the alternatives being considered can be found in Chapter 3 of the Tier 1 EIS.
Commenter	Shapp, Mark
Comment I-555-5	Also what of upgrading Tk3 between CP72 and CP75? Amtrak sometimes has to go that way when two MNR trains are in the depot and Tk3 is cleared for 30mph only.
Response	Thank you for your comments. A component project of Alternative 90A addresses track upgrades in this area, and the 90A improvements are included in the Preferred Alternative.
Commenter	Shearer, Adam

Comment I-556-1	I feel that adding high-speed railways to New York would be very beneficial to our state.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Sheldon, Jerry
Comment I-557-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Sheridan, Jim
Comment I-558-1	Let's have a Livingston Avenue Bridge that does it all.
Response	<p>Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.</p>
Commenter	Shipherd, Sam

Comment I-559-1	I am enthused to hear that improvements to our rail infrastructure are in discussion. As a resident of Albany, I very much hope for better service out of Albany.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative will increase the frequency of service and travel times out of Albany.
Commenter	Shipherd, Sam
Comment I-559-2	Also as a resident of Albany, I ask that any updates to the system include provisions for pedestrian and bike access. The Livingstone Avenue Bridge in Albany should be updated to include passage for bikes and pedestrians.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Shusler, Irene
Comment I-560-1	YES! we need a faster way to get to NYC.
Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Sillars, Rodger James
Comment I-561-1	As a nation we need the leadership of NY in high speed rail and revival of service to Buffalo Central Terminal!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-557-1.
Commenter	Skill, Lisa
Comment I-562-1	I am voicing my support for the need for a pedestrian/cyclist pathway over the to-be-replaced Livingston Ave. Rail Road Bridge.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Skompinski, Carl B.
Comment I-563-1	I would like to argue for Buffalo's Central Terminal to be a stop along the HS Rail line. The \$1.5M identified for improvements does not do the station justice - so why spend a penny on it. Buffalo needs a signature terminal. here is discussions in the community to

extend light rail to Buffalo's Airport, which would run to Buffalo's Central Terminal. There is also community discussion on revamping a commuter rail loop "The Belt Line" to loop to various part of the city. All three line - High Speed, Airport Extension, and The Belt Line all come together at Buffalo's Central Terminal. SO it's a natural place to place the terminal.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment 557-1.

Commenter Skompinski, Carl B.

Comment I-563-2 I am in support of High Speed Rail through NYS although I think that speeds of 110/125 are not going to cut it for modern travel.

Response Thank you for your comments regarding the High Speed Rail, Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, it was determined that the focus would be on a range of options, with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125.

Commenter Skompinski, Carl B.

Comment I-563-3 The plan needs to eliminate the Depew station and move gates to Buffalo's Central Terminal.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment 557-1.

Commenter Skowron, Frank

Comment I-564-1 I am disappointed in the fact that the 125 Plan does not have an option to stop in Utica, my hometown. With the NanoCenter opening in the near future a 125 option to go from Utica to Albany would be a nice option but given the est. price of the 125 option the 90B option seems to be the best value.

Response Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative would increase service to Utica (doubling the frequency).

Commenter Smcarelli, (No First Name)

Comment I-565-1	High speed magnetic tubes should be the future of NY transportation. Please do some research on it before we spend 14B to move in the wrong direction
Response	Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Smietana, Sophie
Comment I-566-1	The Central Terminal is ideal.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment 557-1.
Commenter	Smigelski, Casey
Comment I-567-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment 557-1.
Commenter	Smith, David C.
Comment I-568-1	The absolute test of long term success is speed and the creation of a system that will be built with the ability to incrementally upgrade speeds over time. Building anything less than that will not serve the long term interests of NY State.

Response	Thank you for your comments, supporting the program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative. The selection of the Preferred Alternative included consideration of constructability, and one of the advantages of Alternative 90B is that more of the additional trackage is constrained to the existing right-of-way (than Alternatives 110 or 125) and benefits can accrue within 2 to 5 years of the start of construction. The program schedule is outlined in the Service Development Plan, and building individual segments and supporting infrastructure, based on identification of funding and other factors, may follow an incremental approach to bringing the program into revenue service.
Commenter	Smith, David C.
Comment I-568-2	The biggest problem will be the opposition that will emerge and potentially delay construction until the proposed level of service is already dated technology. We could never build the Transcontinental Railroad today with all of the NIMBY's.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Comments from the public have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Smith, David C.
Comment I-568-3	Please consider a stop in Wayne County too, because it is on the longest stretch of the Empire Corridor without a station.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. At this time, the program focuses on improving intercity rail passenger service along the Empire Corridor between New York City and Niagara Falls, using existing stations. Adding stations to the route could be part of future studies for expanding service beyond the current area outlined in the Tier 1 EIS.
Commenter	Smith, Max
Comment I-569-1	My name is Max Smith and I believe we need to save the section of the Adirondack Scenic Railroad between Big Moose and Saranac Lake. Many people who snow mobile and hike through the Adirondacks want to rip up the tracks and turn it into a hiking trail. We need to save the tracks because it is the only route through the heart of the Adirondacks. Also the scenery is beautiful. The line was busy during the 1980 Winter Olympics bringing people to and from Lake Placid.
Response	Thank you for your comments on the HSR Empire Corridor Program. The program considers improvement alternatives for the Empire Corridor between New York City and Albany and Albany to Niagara Falls. Improvements in Empire Service would also improve service on regional lines that use the same trackage, such as Amtrak's Adirondack Line. However, the Adirondack Scenic Railroad, a separate right of way, would not follow the areas outlined in the program and does not service the same cities as the Empire Corridor. Utica's train station has been extensively restored in partnership with Oneida County, and recently had an additional platform constructed on the westbound side that also provides connections with the Adirondack Scenic Railroad.
Commenter	Smith, Max
Comment I-569-2	Another thing we should save the line because the Saranac and North Creek Railroad would allow us to run their passenger cars through the area such as dome and sleeper cars. The Saranac & North Creek operates out of Saranac Lake and it will be nice for them to help us to run trains to and from Saranac Lake. If the tracks get ripped up, it will ruin our history and business. Save the railroad!

Response	Thank you for your comments. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor between New York City and Niagara Falls. However, the Adirondack Scenic Railroad, a separate right of way, would not follow the areas outlined in the program and does not service the same cities as the Empire Corridor.
Commenter	Smith, Max
Comment I-569-3	My name is Max Smith and I believe we need high speed rail service in New York State.
Response	Thank you for your comments in support on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Smith, Max
Comment I-569-4	we need a high speed rail system to replace the turboliners that is safer, fast, and environment friendly. Also, there is no overnight passenger train that runs between Albany and Niagara Falls except for Amtrak train 49 "Lake Shore Limited." Amtrak used to run train 65 and 66 an overnight train of "Maple Leaf" but due to lack of ridership, train 65 and 66 were eliminated many years ago. If we have an overnight high speed train, we should have sleeping cars.
Response	Thank you for your comments regarding overnight train service needs on the Empire Corridor. Comments, for improvements to the service, have been considered in the development of the Service Development Plan for the Empire Corridor High Speed Rail Program and the selection of the Preferred Alternative. Operating timetables will be examined in further detail in the Tier 2 assessments.
Commenter	Tanti, Carol
Comment I-570-1	I'm interested in, you know, having trains that are going west that have, west of Albany, that have the same potential that we can make a day trip to another city and then come home in the same day.
Response	Your comments regarding schedules and travel times have been considered in the development of the Service Development Plan. Although final future timetables have not been determined, Appendix D of the Tier 1 EIS provides simulated future timetables for each of the program alternatives. A day trip from Albany to western cities within the state was examined in the Service Development Plan developed for the Preferred Alternative. Operating timetables will be examined in further detail in the Tier 2 assessments.
Commenter	Smith, Robert
Comment I-571-1	only the Base MAS is reasonable and necessary at this time.
Response	Thank you for your comments in the support of the Base Alternative. Operating benefits, capital requirements and responsiveness to passenger needs have been part of the criteria used for the FRA and NYSDOT to select the Preferred Alternative.
Commenter	Smith, Robert
Comment I-571-2	I would love to see 90A or B but the cost not only to build these and to operate them precludes there adoption, given the poor state of NY's economy at present and presumably in the near and far future.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and environmental impacts.
Commenter	Smith, Stephen
Comment I-572-1	I vote for option 110 it seems the best value although its has potential for high adverse affects for the "historic" impact area. It would be good to try to avoid as many adverse affects to that area as possible.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered in selecting Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Smithling, Cody
Comment I-573-1	Let me just start by saying that the 125 MPH should be out of the question. Not only would it require more money to build a whole new line, but it would go around the city of Utica.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. Alternative 90B was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.
Commenter	Smithling, Cody
Comment I-573-2	The economy of the Utica/Rome area is already on the rebound. With new drone jobs at Griffiss International and Nano technology jobs coming to the area, investors or outside business partners from NYC would most likely love the ability to travel on high speed rail rather than paying a ton of money for airlines. Union Station is also Utica's only primary transportation connection to other cities in the state. The closest airport that offers an opportunity for civilians to travel outside of CNY is Hancock International in Syracuse. I am in high favor of any resolution that includes Utica as a stop on the new high speed rail line.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, relating to preserving and providing train service for the cities of Utica and Rome, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As outlined in the preceding response, Alternative 90B would improve the frequency of service to Utica and Rome, unlike Alternative 125, which would not provide express service to these cities.
Commenter	Smith, Wayne
Comment I-574-1	I believe the 125 option would be the best solution to help entice people out of planes and on to trains.

Response	Thank you for providing your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance, as described in the preceding responses.
Commenter	Snodgrass, Randall
Comment I-575-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	<p>Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.</p>
Commenter	Soman, Sheldon
Comment I-576-1	If we are going to spend money on high speed rail, it makes sense to go for the highest speed possible. We should try to have the 125 mph speed
Response	Your comments in support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Soman, Sheldon
Comment I-576-2	I am in favor of the NYS High Speed rail improvements. The plan looks great

Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Sopchak, Carl
Comment I-577-1	I don't see the 125 MPH Option worth the cost
Response	Thank you for your comments concerning the 125 Alternative, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Sopchak, Carl
Comment I-577-2	Looking at the options, IMHO, that line is drawn after the 90 MPH Option A - and maybe even after the Base Option. The difference in cost of these options seems extremely large for the minor incremental benefit.
Response	Thank you for your comments. Economic costs and benefits of each alternative, for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Spadafore, Mark
Comment I-578-1	I would encourage all regulatory bodies to not only do the improvements for higher speed rail, but to look at installing "mag lev" tracks across Upstate.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Spula, Jack Bradigan
Comment I-579-1	I strongly favor "Alternative 125." This plan offers both the best, fastest service of all the alternatives under consideration, and it also literally lays the groundwork for eventual development of ~200 mph service with state-of-the-art equipment. Do not take this as my rejecting Alternatives 90A. 90B or 100, however. There's no doubt we must move beyond the status quo and seriously upgrade passenger rail across New York State. But we should aim for the highest level of service possible.
Response	Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For the reasons outlined above, very high speed rail was dismissed from consideration in the Tier 1 EIS. Alternative 125 was dismissed from further consideration, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Stadler, Rebecca

Comment I-580-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment 575-1.

Commenter Staley, Bian

Comment I-581-1 How can the NYS DOT hope to maintain a high speed rail line when you can't keep Route 8 or Rt 28 or Rt 12 in decent shape? We have THOUSANDS of bridges that are crumbling, wouldn't the money be better spent fixing what we already have?
No way, no high speed rail, Not in this New York.

Response Thank you for your comments on the Empire Corridor Program. In selecting the Preferred Alternative, the program cost and public investment have been considered by the FRA and NYSDOT.

Commenter Stamm, Corina

Comment I-582-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with

	evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-575-1.
Commenter	Stanlis, Ingrid
Comment I-583-1	Although the fastest option will cost the most, I strongly support the fastest option.
Response	Thank you for your comments, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 125 was dismissed from further consideration, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Stark, Barry E.
Comment I-584-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Stevens, Marty
Comment I-585-1	Buffalo needs to utilize the Central Station to get it back to its original beauty and stature. The High Speed Rail would be a fantastic solution to utilization.

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.
Commenter	Stewart, Jr., Robert J.
Comment I-586-1	Yeah, I'd be willing to spend a little bit more in my taxes for this imperative project!!
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Stieger, Matt
Comment I-587-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-584-1.
Commenter	Stimmer, Jonathan
Comment I-588-1	It is 2014, let's build a high speed rail system in New York.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered in the selection of the Preferred Alternative.
Commenter	Stimmer, Jonathan
Comment I-588-2	<p>You probably already guessed that I am living in Japan. Japan in many ways is the gold standard for high speed rail everywhere. The Bullet Train or JR Shinkansen as it is known here in Japan; is both profitable and efficient.</p> <p>It is much safer than road traffic. In more than 50 years of operation, not a single person has perished on the Shinkansen in a train crash -- in a country that experiences thousands of earthquakes every year.</p>

Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Stimmer, Jonathan
Comment I-588-3	I say, go all the way, and build a maglev. At least build an experimental track over a short distance.
Response	Thank you for your comment on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Stimmer, Jonathan
Comment I-588-4	I have read the plans for the upgrading of NY State to high speed rail. Go for it. Even at 125 mph, we are already behind the rest of the world.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed from further consideration, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Stimmer, Jonathan
Comment I-588-5	But having a maximum speed of 125 mph in the Empire Corridor is better than what we have today.
Response	Thank you for your comments, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative, for the reasons outlined in the preceding response. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation
Comment I-589-1	Has any consideration been given to purchasing the mainline tracks of CSX' Mohawk, Rochester and Niagara subdivisions as part of the project? Dedicated passenger tracks would be in the center of the corridor as previous rather than to one side. Minimum track centers could be based on FRA regulations and not CSX mandates. Construction could be done by competitive bid rather than CSX force account. a. Fund purchase through bonds issued by a State Rail Authority (similar to STERA) secured by the value of the corridor and by future trackage rights revenues b. Use trackage rights revenues from Amtrak and freight railroads to fund the debt service, operation and maintenance of the corridor. c. Offset the property tax impact to municipalities with PILOT payments, phasing them out over a 10 or 20 year period.
Response	Thank you for providing your comments. The Tier 1 EIS evaluates the range of alternatives to optimize rail operations along the Empire Corridor, and the Preferred Alternative will add approximately 370 miles of additional trackage largely within the existing right-of-way

	to better segregate passenger and freight rail. The purpose of the High Speed Rail Empire Corridor Program is to improve intercity rail passenger service in New York State through infrastructure investments and operational improvements.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation
Comment I-589-2	Has a change of locomotive for through trains at Albany-Rensselaer been considered? This would free up additional (3,200 hp) P32AC-DM dual-mode locomotives for increased service on the Empire Corridor South, and allow use of Amtrak's 4,200 hp P42DC units West, East and North of Albany-Rensselaer. When future replacement locomotives or trainsets are ordered, this would require the purchase of fewer of the more expensive and complex dual-mode units, reducing capital and operating costs.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The acquisition of trainsets/locomotives and coaches to support service expansion is addressed in the Service Development Plan. Equipment needs would be further refined as part of Tier 2 assessments.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation
Comment I-589-3	Why was electric traction selected for the rejected 125 mph alternative on the existing corridor? Capital and O&M costs for electrification are staggering! Restored passenger tracks on the corridor can be constructed to FRA class 7 (geometry permitting) if Barrier Gates are used at level crossings. Technology to operate conventional diesel-electric trains at 125 mph service speeds has existed since at least 1976. Bombardier and Talgo have FRA Tier II compliant designs ready to go into production, and Siemens (in partnership with Cummins engines) is developing a new 125 mph locomotive for Illinois DOT.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, relating to the types of equipment to be operated, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Your suggestion to use electric power for operating the trains would be achieved by Alternative 125, which was dismissed from further consideration in the Tier 1 FEIS. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation
Comment I-589-4	For Alternative 125, if a dedicated, grade-separated ROW and electrification are proposed, what makes the 160 mph alternative over \$12 billion more than the 125 mph alternative when the infrastructure is virtually identical? And why is the 220 mph alternative another \$12 billion above the 160 mph alternative?
Response	Your comments regarding alternative cost and selections have been considered in the selection of Alternative 90B as the Preferred Alternative. In developing the alternatives outlined in the Tier 1 EIS for the High Speed Rail Empire Corridor Program, cost estimates were determined on the engineering and infrastructure that were required to support each alternative. For the 160 mph and 220 mph MAS alternatives, between Albany-Rensselaer and New York City, there would be an entirely new station and market configuration, with construction of new right-of-way on a viaduct structure aligned with existing highways (assumed to be I-87/NY State Thruway). Physical and environmental characteristics of the existing Empire Corridor South would result in either extraordinary encroachments and

	impacts or a diversion so far to the east as to fall outside the Empire Corridor as defined. The Very High Speed (VHS) alternatives were rejected for their extremely high costs (nearly triple the next costly alternative)– due to the likelihood of significant community and environmental impacts and the significant engineering design difficulties necessary to create a sufficiently straight track alignment to permit these speeds. Details on the cost of each of the alternatives considered can be found in Chapter 3 of the Tier 1 EIS.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation
Comment I-589-5	Please reconsider a 125 mph alternative on the existing corridor, based on State ownership, without electrification. Excluding the purchase price of the Corridor, capital costs should be incrementally higher (say 10%) than Alternative 110, or about \$68 billion. O&M costs would likely increase similarly- approx. \$190 million. If revenues follow the pattern, then the operating deficit would only be approx. \$26.4m compared to \$59m for the current Alternative 125.
Response	Your comments have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. In developing the engineering criteria for operating at 125 miles per hour, it was determined that the current alignment used by the existing service on CSX Transportation right of way was not acceptable. It was also determined that the engineering requirements for 125 mile per hour operation would have significant environmental impacts on the communities along the route and that the 125 alternative should be developed on a new alignment in many locations between Albany and Buffalo.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation
Comment I-589-6	Use Barrier Gates in normally closed mode to secure low-traffic private crossings. The gates will only open upon request to the Rail Dispatcher. For higher traffic private crossings (as to an industry) consider normally open Barrier Gates, or possibly normally open during business hours and normally closed at all other times.
Response	Thank you for your comments regarding grade crossing safety and operations. Section 2.6. Safety Considerations, and Appendix E, Section 3.3.4 Grade Crossings discuss safety and grade crossings. Rail operations at individual crossings will be further reviewed in Tier 2 assessments for the program, as individual projects are further developed for constructability.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation
Comment I-589-7	Use existing Defect Detector technology to ensure safe operation of freight and high-speed passenger service on FRA minimum track separation. To maximize corridor capacity, consider allowing fast Intermodal freights to share the passenger tracks, if capable of maintaining a 60 mph minimum speed and traversing increased super elevation on curves.
Response	Thank you for your comments. Rail operations along the Empire Corridor on Metro North Railroad, Amtrak and CSX Transportation are already protected by a variety of defect detectors to inspect the trains for dragging equipment and other wheel and axle irregularities.
Commenter	Stockman, Mark, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation, Emergency Relief Unit, Local Programs Bureau, NYS Department of Transportation

Comment I-589-8	Initially, upgrade entire corridor to 3 or 4 bi-directional tracks, with PTC signaling, freight tracks engineered to FRA class 5 and passenger tracks engineered to FRA class 6 and 7 where practical. This will allow use of current Amtrak equipment at its full potential of 110 mph. Next, make incremental improvements to the corridor, eliminating speed restrictions, capacity constraints, points of conflict, and improving both freight and passenger performance. Finally, when 125 mph passenger equipment becomes available, upgrade crossings to Barrier Gates to allow operation at Class 7 speeds (125 mph.)
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered in selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. The 125 alternative includes creating new trackage on a new alignment for much of the route west of Albany and was dismissed due to higher costs and impacts. Diagrams of the installation of additional trackage is shown in Appendix A (Volume 2) of the Tier 1 EIS for each of the alternatives.
Commenter	Stokes, Belle Louise
Comment I-590-1	Will comment on plans when have gathered thoughts, but do agree need to plan for world-standard high speeds, dedicated passenger rails + integrated systems + CENTRAL TERMINAL as Buffalo hub!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Stowe, Richard
Comment I-591-1	Please consider siting a train station in Albany north of downtown and the State Capitol Design it as a last mile station that is walkable and bikeable. Include bike share.
Response	Thank you for your comment regarding a new station in Albany. The Tier 1 EIS for the High Speed Rail Empire Corridor Program is a corridor-level evaluation that considers use of the existing stations. The inclusion of additional stations or expanded pedestrian/bicycle access along the Empire Corridor could be part of future studies for expanding service.
Commenter	Stowe, Richard
Comment I-591-2	Please include bike (bicycle) parking in the new train sets that are procured for improvements HSRECP.

Response	Your comments, relating to the accessibility of bicycles on trains operated in the future, has been considered as part of the review process for the Tier 1 EIS. Currently, bicycles can be accommodated on the Empire Corridor, but require separate ticketing Individual projects, or groups of projects, will undergo a second evaluation (Tier 2) to further advance the design for that project, or group of projects including looking at options for pedestrian/bicycle accommodations.
Commenter	Stowe, Richard
Comment I-591-3	I support the 110 mph alternative.
Response	Thank you for your comments supporting the 110 Alternative, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Stuczynski, Ken JP
Comment I-592-1	If Buffalo is to be part of the high-speed rail system, I sincerely hope the Buffalo Central Terminal (old NYCT) will be a part of it.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the need for station improvements in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo, including a new station development at Buffalo-Exchange Street and updates at the Buffalo-Depew Station, are discussed in the response to Comment I-590-1.
Commenter	Sullivan, E.B.
Comment I-593-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the need for station improvements in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo, including a new station development at Buffalo-Exchange Street and updates at the Buffalo-Depew Station, are discussed in the response to Comment I-590-1.
Commenter	Sullivan, Susan

Comment I-594-1	I am so in favor of this. Albany needs this!
Response	Thank you for comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Sunser, Penny
Comment I-595-1	Just a quick note to say how very much I oppose the High Speed Rail proposal.
Response	Comments from the public on the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Sweat, Laura
Comment I-596-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-590-1.
Commenter	Sweeney, Cameron, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-597-1	I think that the High Speed Rail would not be a great idea. I think this because all of the options range from \$390 million to \$14.71 billion. New York state is in major debt.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Sweeney, Cameron, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-597-2	I understand that the "No Build" alternative includes the option called "Base Alternative" and that this includes 8 projects that have already been approved and started. This option is costing NYS 290 million dollars. I think it is financially irresponsible for NYS to spend all of this money.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Base Alternative includes eight projects that have either been built or are under construction

that address previously identified capacity constraints. Individual projects, or groups of projects for the Preferred Alternative, will undergo a second evaluation (Tier 2) to further advance the design for that project, or group of projects.

Commenter Sweeney, Cameron, D.S. Ray Middle School, D.S. Ray Middle School

Comment I-597-3 Another reason that the High Speed rail is not a good idea is for environmental reasons.

Response Thank you for commenting on High Speed Rail Empire Corridor Program. Social, economic and environmental factors have all been considered by the FRA and NYSDOT in selecting the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. The net annual operational benefits for the Preferred Alternative would be roughly equivalent to eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year.

Commenter Swift, Adam

Comment I-598-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Szczupak, Anne

Comment I-599-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Taibi, John

Comment I-600-1 Of the four Alternatives most relevant, 90A, 90B, 110, and 125, I cannot agree with E.S.P.A. in thinking that Alternative 110 is the superior proposal. Rather, I believe that it adds too little improvement over Alternative 90B so that the meager benefit does not offset its extra expense of (roughly) \$750,000 million.

Response Thank you for your comment, relating to alternative selection, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Taibi, John

Comment I-600-2 I really feel that Alternative 125 is the best proposal, mainly because it offers the highest MAS, the highest average speed, and because its trains would be electrically propelled on Corridor West.

Response Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail. Your suggestion to use electric power for operating the trains would be achieved by Alternative 125, which was dismissed from further consideration in the Tier 1 FEIS. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 90B would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternative 125.

Commenter Taibi, John

Comment I-600-3 Might it be advisable to subtract one or two trains from the 15 proposed to run on the 125mph new corridor and add them to the existing corridor so that some degree of improved scheduling may be afforded Schenectady, Amsterdam, Utica, and Rome?

Response Your comments regarding train service on the Empire Corridor have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, Alternative 90B will improve service to these existing stations.

Commenter Taibi, John

Comment I-600-4 If the subtracting and adding of trains is not an alternative, might it then be possible to consider that along the new Albany-Syracuse corridor an “intermediate” stop be considered.

Response Thank you for your comments. As addressed in the preceding response, Alternative 125 has been dismissed from further consideration. The Preferred Alternative, Alternative 90B, would improve frequency of service to existing stations, particularly west of Albany where frequency would roughly double. Alignments, physical improvements, and service frequency for each of the program alternatives are discussed in Chapter 3 of the Tier 1 EIS.

Commenter Taibi, John

Comment I-600-5 In consideration of the route proposed for construction of the Alternative 125 West corridor, I wonder if any thought had been given, or study undertaken, in the route of the abandoned ex-West Shore Railroad that had at one time run from (south of) Albany to Buffalo. Its right-of-way is still mostly unused, and it also runs in a closer proximity to the cities that your proposed 125 corridor bypasses.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). The West Shore Railroad right of way, in many locations, has been redeveloped for other uses and is still utilized by CSXT in the Rochester area. It does not offer access to Albany-Rensselaer Station or a direct connection to Manhattan.

Commenter Taibi, John

Comment I-600-6 I also feel that a “second look” may be in order for Alternative 160, which NYSDOT had initially ruled out due to its high environmental impact and prohibitive cost (\$37 Billion).

Response Thank you for your comments. The Tier 1 EIS for the High Speed Rail Empire Corridor Program focused on studying alternatives using systems that would allow for connecting with the existing rail network. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Taibi, John

Comment I-600-7 Lastly, in your Alternative 125 portion of the program one of the maps shown located Utica lying to the west of Rome. I’m sure this was an oversight and that you know, in actuality, it lies to the east.

Response	Thank you for your observation. The presentation will be reviewed and revised as necessary to reflect any corrections in the geographical location of stations along the Empire Corridor.
Commenter	Tanck, Carol
Comment I-601-1	Please drop the high speed rail project.
Response	Comments from the public on the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Tanck, Ron
Comment I-602-1	Please drop this ridiculous project before another penny is wasted.
Response	Comments from the public on the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Taylor, Charles
Comment I-603-1	<p>As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:</p> <ul style="list-style-type: none"> -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the need for station improvements in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo, including a new station development at Buffalo-Exchange Street and updates at the Buffalo-Depew Station, are discussed in the response to Comment I-598-1.
Commenter	Taylor, Elizabeth
Comment I-604-1	I am concerned that the proposed high speed rail corridor would negatively affect business operations.
Response	Thank you for your comments on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. In the Tier 1 EIS, Chapters 3 and 4 discuss the positive impacts of the program. Specifically, Section 4.3, Regional Population and Employment, and Business Districts,

discusses how the program will create employment opportunities and support the labor markets in the regions served by the improved rail service.

Commenter Taylor, Elizabeth

Comment I-604-2 I encourage the selection of the base alternative to maintain our ability to easily use and rely on the freight rail network for safe, reliable and efficient service. The proposed 90A, 90B, and 110 alternatives put forth in the DEIS commingle freight and high speed rail, significantly constraining freight rail operations.

Response Thank you for your comments, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. As noted in the prior responses, the addition of dedicated third and fourth tracks along Empire Corridor where freight operations are heaviest will represent an improvement in freight operations, compared to the Base Alternative.

Commenter Tedesco, Greg

Comment I-605-1 I am so excited about the potential for high speed rail in NY! I am not sure if you are aware but there is a perfect property and complex to re use and make into a wonderful train station, it is called the bUffalo Central terminal. No need to build a new facility just restore an already built beautiful historical building!

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Terenzetti, Terry

Comment I-606-1 Please ensure that the High-Speed Rail stops in UTICA
PLEASE DO NOT EXCLUDE THE UTICA-ROME AREA AND THE MOHAWK VALLEY FROM A DIRECT STOP ON THE HIGH-SPEED RAIL, REGARDLESS OF THE TRAINS SPEED.

Response Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam, and Schenectady. Alternative 90B was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.

Commenter Terrana, Tammy L.

Comment I-607-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-605-1.

Commenter Terry, Carol

Comment I-608-1 I am fully in favor of anything to improve the rail service in NY State. I frequently travel via rail from Syracuse to NYC. I would like to utilize the system more – it needs improvement – especially from Syr. To Albany

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would substantially increase the frequency of service west of Albany. This alternative would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Teter, Edward and Barbara

Comment I-609-1 As a NY State taxpayer I fully support proposal #125 to drastically improve the Empire Corridor.

Response Thank you for your comments supporting the 125 Alternative and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). Alternative 90B would involve less right-of-way and environmental impacts than Alternative 125, while improving passenger and freight operations as described in the preceding response.

Commenter Thomas, Erin

Comment I-610-1 Please consider the value of the walk/bike component of the community

Response Thank you for your comment regarding pedestrian and bicycle access. Currently, bicycles can be accommodated on the Empire Corridor, but require separate ticketing. Comments

from the public, relating to the accessibility of bicycles and pedestrians, have been considered in the design of station facilities and other facilities constructed as separate projects along the route and in the Tier 1 assessments for Empire Corridor. Individual projects, or groups of projects, will undergo a second evaluation (Tier 2) to further advance design for that project, or group of projects including looking at options for pedestrian/bicycle accommodations.

Commenter Thompson, Ted

Comment I-611-1 Double-tracking between Albany and Schenectady is vital.

Response Thank you for your comment regarding the need for multiple tracks between Albany and Schenectady. Additional trackage has been installed as part of the Albany-Schenectady Double Track Project, part of the Base Alternative.

Commenter Thompson, Ted

Comment I-611-2 There is essentially no demand for high speed travel between Buffalo and Albany as witnessed by the absence of direct air service.

Response Thank you for your comments on High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS. Currently, at least three major airlines provide air service between Albany and Buffalo, and this had been the fastest growing segment for rail ridership historically, as measured as a percentage of overall growth.

Commenter Thompson, Ted

Comment I-611-3 while improved Amtrak service between city pairs by judicious upgrades to trackage and signaling (as well as the provision of Wi-Fi on the trains) would seem justifiable, I question whether billions in improved rail passenger service between Albany and Buffalo can be justified.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.

Commenter Thompson, Ted

Comment I-611-4 Therefore, I am comfortable up to Alternative 90A with 90B a consideration for future years if improved ridership justifies the additional cost.

Response Thank you for your comments in support of Alternative 90A, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Alternative 90A improvements are incorporated into the Preferred Alternative.

Commenter Thurgs, J.

Comment I-612-1 In favor of the 110. Need to stop in Utica. Like the extra daily train trips and like the 30' distance from the freight line.

Response Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the

major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. Alternative 90B would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.

Commenter Tobin, Dave

Comment I-613-1 I fully support 110 Alternative. However, I am concerned that by the time that alternative is completed, it will be outdated.

Response Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 EIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Tonning, Nils A.

Comment I-614-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including

Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter **Torcello, Frank**

Comment
I-615-1 I just want to take a moment to encourage that this project bring the high speed rail line through Buffalo, NY. Ideally the track could come straight from NYC up to Buffalo and then out to Albany, etc.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will improve service along Empire Corridor, providing more frequent, reliable service to Buffalo, Albany, and New York City.

Commenter **Trinder, Stephen**

Comment
I-616-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
-The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-614-1.

Commenter **True-Frost, Cora**

Comment
I-617-1 My family wholeheartedly embraces the plans for a high speed rail connecting Syracuse and NYC.

Response Your comments in support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative, which will improve service between NYC and destinations along Empire Corridor West, including Syracuse.

Commenter **Trufelman, Lloyd**

Comment
I-618-1 High speed rail would be a prudent 21st century infrastructure investment for NY State. However a conventional system would be very costly, so I would encourage state planners to investigate the option of testing the Hyperloop,

Response	Thank you for your comment on the High Speed Rail Empire Corridor Tier 1 DEIS. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing national and regional rail network on the Northeast Corridor. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Tulloch, Timothy
Comment I-619-1	I support the 110 option for these reasons: 1. For not much more cost than that of 90B, the 110 proposal provides an additional 325 miles of dedicated passenger track, providing the maximum segregation--as I understand it--between passenger and freight trains using the corridor. In addition to increasing safety and expediting traffic (for both rail and passenger services), 110 delivers the maximum speed and travel times among the non-electric options. 2. Track and other infrastructure projects under this plan will begin to improve performance incrementally, long before the entire program is completed. Its benefits will be quickly apparent. 3. This plan's maximally improved infrastructure will be better able to handle higher-speed trains that will very likely be developed in the future.
Response	Thank you for your comments supporting the 110 Alternative, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.
Commenter	Tulloch, Timothy
Comment I-619-2	In the hearing and in the informational handouts, I notice the absence of any mention of the fact that this is an international corridor, connecting two megacities, New York and Toronto.
Response	Thank you for your comment. The scope of the Tier 1 EIS focuses on the Empire Corridor from New York City to Niagara Falls, New York, and passenger forecasts conservatively exclude trips that may have one trip end in Toronto. The program will improve service that operates along Empire Corridor, including Maple Leaf service that continues into Toronto.
Commenter	Tulloch, Timothy
Comment I-619-3	Further, has any thought been given to cooperation with Canada to improve total NYC-Toronto and Toronto-NYC travel times by upgrading the Canada leg?
Response	Thank you for your comments. The scope of the High Speed Rail Empire Corridor Program is focused on improvements between New York City and Niagara Falls. Additional improvements on routes in Canada out of this corridor are not being considered as part of the Empire Corridor Program at this time. The Preferred Alternative will improve service along the Empire Corridor, and improvements to Empire Service will benefit travel on connecting regional lines, including connecting trains to destinations such as Toronto (Maple Leaf Line).
Commenter	Michaelson, Kirsten

Comment I-620-1	When I initially heard about the High Speed Rail Project, it was in a Wall Street Journal article about six months ago. It said it was being orchestrated by the Pullman Company and they were intending to use Pullman-type cars, sleeping cars as part of the project and it was going to go over to Lake Placid. It was a Wall Street article about six or nine months ago and I wonder if any of that is happening still or in the plans?
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. Except for the Lake Shore Limited service, Pullman-type sleeping cars are not envisioned for the Empire Corridor service.
Commenter	Michaelson, Kirsten
Comment I-620-2	Did you cover that at the beginning of your talk or is that online, the timetable of how long it will take to build once the project is selected?
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The schedule for implementation of the High Speed Rail Empire Corridor Program was addressed in the Service Development Plan and will be further developed in the Tier 2 assessment. The program will continue with the identification of funding for individual segments of the route and specific projects. As described in Section 6.3 of the Tier 1 EIS, the Preferred Alternative would begin to confer benefits to the users by 2 to 5 years after the start of construction..
Commenter	Michaelson, Kirsten
Comment I-620-3	My name is Kirsten Michaelson and my comment is, my vote is for the 125 train with it stopping in Utica.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. Alternative 90B was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.
Commenter	Tylicke, Scott
Comment I-621-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for

certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Umhauer, Kitty

Comment I-622-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:
 -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Valerio, John

Comment I-623-1 Why not use SYR as a hub and build a high speed rail SYR - BGM - AVP - NYC. Runs North to South. Less stops and train could reach full potential of speed. Current BUF - ALB could be upgraded and used to connect to SYR hub.

Response Thank you for your comments on the Empire Corridor High Speed Rail Program. The scope of the program is focused on improvements between New York City and Niagara Falls on or near the current Empire Corridor alignment. Comments from the public, for improvements to the service outside of these limits, have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred

	Alternative, the FRA and NYSDOT, selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts.
Commenter	Vallelonga, Damian
Comment I-624-1	I fully support faster train service throughout the state, and would likely travel more often via train if this were available.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Mink, Dan
Comment I-625-1	To have an average time of 77 miles per hour, I can do that in my car. What is the benefit to the rider as opposed to the massive benefits for unions, for suppliers, for construction companies, for producers of raw materials, all these people benefit greatly but the end user will get virtually no benefit from this.
Response	Thank you for your comments on the HSR Empire Corridor Program. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Van Ness, Cynthia
Comment I-626-1	As a supporter of the National Landmark known as the Buffalo Central Terminal, I would like to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project ? Tier I EIS. Please bring rail back to this extraordinary building!
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-621-1.
Commenter	Van Patten, Chris
Comment I-627-1	Please make this happen! Option 125 sounds like the best possible option.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Van Patten, Chris
Comment I-627-2	One idea: construct a new high speed station in Herkimer.
Response	Thank you for your comments regarding a new station in Herkimer. The Tier 1 EIS for the High Speed Rail Empire Corridor Program evaluates a range of corridor-level service

improvements for intercity passenger rail with the purpose of making decisions on system wide level service, including service reliability, frequency, and train speeds. The Tier 1 EIS considers using the existing stations in each of the alternatives. The inclusion of additional stations along the Empire Corridor could be part of future studies for expanding service.

Commenter Van Riper, Daniel W.

Comment I-628-1 This concerns the Livingston Avenue Bridge in Albany NY, which is disintegrating at the base and desperately needs to be replaced. The new bridge MUST have a dedicated pedestrian walkway AND a dedicated bike lane on BOTH sides.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Van Valin, Robert

Comment I-629-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Vaughan, Ph.D., Raymond C.

Comment I-630-1 I support Alternative 110, partly because of its superior Cost Effectiveness (low Annualized O&M Cost per Rider). However, I also support ongoing planning work for higher-speed alternatives such as 125.

Response Thank you for your comments supporting the 110 and 125 Alternatives and the benefits from high speed rail, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125. Although Alternative 110 has the lowest subsidy, the subsidy for the Preferred Alternative (Alternative 90B) would be \$13 per rider, which would be lower than both Alternative 125's subsidy per rider of \$14 and the Base Alternative's subsidy per rider of \$17 per rider. Alternative 90B's costs would also be less than that for Alternatives 110 and 125.

Commenter Vaughan, Ph.D., Raymond C.

Comment I-630-2 The Tier 1 DEIS should be updated to reflect current status of the Niagara Falls station

Response Thank you for your comments. Information on the reconstructed Niagara Falls International Station has been incorporated into the Tier 1 EIS. This facility replaced the existing Amtrak facilities and provides a facility that recognizes the international tourist destination at Niagara Falls, New York and included improvements to the track and signal systems to improve train operations at the new station location. Section 2.5.5 discusses the current status of improvements at stations along Empire Corridor. Chapter 3 of the Tier 1 EIS does reflect the current status for the station and the project is included as part of the Base Alternative.

Commenter Vaughan, Ph.D., Raymond C.

Comment I-630-3 The Empire Corridor High Speed Rail program should not defer improvement/replacement of the downtown Buffalo station until Alternative 125. Buffalo needs a better station.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the stations in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of improvements for the purpose of making decisions on corridor-level service. Alternative 125, which would have required a new or relocated Buffalo station location, has been dismissed from further consideration. The focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. In the spring of 2017, the committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-629-1.

Commenter Vaughan, Ph.D., Raymond C.

Comment I-630-4 Alternatives analysis for the Buffalo station is complex and needs to be undertaken as soon as possible. The alternatives should include at least two geographic locations near downtown Buffalo (reuse of restored Central Terminal, and a potential new location immediately north or west of the "Larkinville" area of Buffalo) that are capable of serving trains to/from Cleveland and Chicago as well as trains to/from Niagara Falls and Toronto. Analysis of such alternatives should be sufficiently detailed to show how freight and passenger rail traffic would be separated (e.g., by flyovers or by passenger tracks that remain elevated) at the Belt Line and elsewhere, and should provide at least a preliminary

assessment of light rail and automobile traffic flows (for passengers going to/from the station) in relation to existing light rail and traffic arteries.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-629-1.

Commenter Venturi, Jim

Comment Is 125MPH really high speed rail service?
I-631-1

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, it was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125.

Commenter Venturi, Jim

Comment What are the most traveled flight routes?
I-631-2

Response Thank you for your comments about air travel in the Empire Corridor. Chapter 2 and Appendix E of the Tier 1 EIS provides details on the existing transportation systems in the Empire Corridor, including air travel. A detailed assessment of market demand and projected ridership was completed for each of the alternatives discussed in the Tier 1 EIS. Ridership and revenue performance have been important considerations by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative.

Commenter Venturi, Jim

Comment What about electrifying present service between Albany and New York City?
I-631-3

Response Thank you for your question regarding electric propulsion services in the Empire Corridor. The operating alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor continue to utilize diesel locomotives for the movement of trains between New York City and Albany-Rensselaer in the Hudson Valley. It was determined that diesel-electric locomotives could deliver the same operating performance as electric motive power.

Commenter Venturi, Jim

Comment What about improving times to Montreal?
I-631-4

Response Thank you for your comments. The High Speed Rail Empire Corridor Program is focused on improving intercity rail passenger service along the Empire Corridor between New York City and Niagara Falls. Amtrak service to Montreal is currently provided via the Adirondack Line. New York State has had a long partnership with Amtrak to provide service to Montreal dating back to 1974, and utilizes the tracks of the Canadian Pacific for this route. Over the years, New York State DOT has improved the tracks, including recently new

double track in the area of Ballston Spa, to upgrade passenger trains operations on this route. The Preferred Alternative will improve service along the Empire Corridor, and improvements to Empire Service will benefit travel on connecting regional lines, including connecting trains to Montreal (Adirondack Line). Improving service to destinations in Canada could be part of future studies for expanding service beyond the current area outlined in the Tier 1 EIS.

Commenter Verburg, Tom

Comment I-632-1 Please consider constructing a bicycling friendly lane on the Livingston Ave bridge for cyclists.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Vester, Nathan

Comment I-633-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Vincent, Jim

Comment I-634-1	The last thing NY needs is a "high speed rail Empire Corridor." As all high speed rail projects have shown they are not economically feasible and in many cases the overall rail system and equipment will not support them. Less spending and lower taxes will bring more business to NY not projects like this.
Response	Concerns from the public on the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS. Economic costs and benefits of each alternative for the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Vitale, Joe
Comment I-635-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-633-1.
Commenter	Volcko, Meghan, D.S. Ray Middle School, D.S. Ray Middle School
Comment I-636-1	I think that we should support the High Speed Rails. Although it is very costly, building these trains would benefit our economy and people greatly. I personally think that the government should fund the Alternative 110 option
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and Alternative 110, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance

Commenter	Waack, Peter
Comment I-637-1	I am deeply concerned about the lack of progress with trains in the US. I understand that train cargo is very important so I don't see a way that the cargo moving and passenger moving can co-exist on the same train tracks. We should do all we can develop our own tracks for passenger travel.
Response	Your comments on the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preservation and the improvement of freight rail traffic to the economy of New York State has been a critical factor in the selection of a preferred alternative.
Commenter	Walsh, Charles
Comment I-638-1	There are many more benefits to installing a high-speed railroad system in New York State, which is why the railroad system should be updated to a high-speed rail or at least have the current tracks upgraded so that trains would be able to travel faster than they do now.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail, the majority of which is located within the existing right-of-way.
Commenter	Walter, Christine
Comment I-639-1	With regards to the Livingston Avenue bridge, I support its restoration with full pedestrian and bicycle access.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Walter, Robert C.
Comment I-640-1	the first priority of the state and Amtrak is to increase track and station capacity to reduce conflicts that cause delays.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Walter, Robert C.
Comment I-640-2	Add a third track between Buffalo and Albany dedicated to Amtrak that could offer increased speeds.

Response	Thank you for your suggestion regarding a third track between Albany and Buffalo. As described in the preceding response and Chapter 3 of the Tier 1 EIS, Alternative 90B would add additional trackage, including more than 280 miles of third track between Schenectady and Buffalo.
Commenter	Walters, John
Comment I-641-1	Thoughts and/or studies on faster service are just a waste of money
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Walters, John
Comment I-641-2	Considering the rate of diminishing returns, it makes little sense to look beyond the (90A) plan projected to be in the range of \$1.6 billion.
Response	Thank you for your comments in support of Alternative 90A. Economic costs and benefits, relating to the different alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Walters, John
Comment I-641-3	In any event a track update regardless of the plan selected is a worthy effort.
Response	Thank you for your comments, relating to the infrastructure improvements for the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage, located primarily within the existing right-of-way, to better segregate passenger and freight rail.
Commenter	Walton, Richard
Comment I-642-1	A better use of money would be to push up repairs of long neglected roads and bridges before spending on a project that will never see it's projected use claims. The upstate area has little use for mass transit as we are not as densely populated as downstate. If it were not for big and continual subsidies mass transit systems in upstate cities could not survive.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Walton, Richard
Comment I-642-2	If you want to improve rail system from Boston to Washington DC you have a population thru that corridor that should make enough use as to make it viable. After this past winter so many roads in this area need major rehabbing and state grants to cities and towns for road and bridge repairs would be a far better use of any money earmarked for the High Speed Rail Project.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Tier 1 DEIS, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. The Empire Corridor route traverses the largest population centers in the state, including New York City, Yonkers, Albany, Rochester, and Buffalo.
Commenter	Wang, Jason

Comment I-643-1	It would seem alternative 90B and 110 are the best alternatives.
Response	Thank you for your comments on these alternatives, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.
Commenter	Wang, Jason
Comment I-643-2	The 125 alternative seems utterly ridiculous, however much I would like to see HSR using catenary rather than diesel run throughout the state. Page Accessed From: https://www.dot.ny.gov/empire-corridor/contact
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 would create a dedicated, 2-track passenger right-of-way over much of the Empire Corridor and was dismissed due to higher costs and impacts.
Commenter	Warner, Tom
Comment I-644-1	Just do it! It has to be good to have a fast, easy and inexpensive rail system from Buffalo to Albany and New York City.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route. Comments from the public have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B would involve lesser costs and speeds increases than Alternatives 110 and 125 and would constrain more of the additional trackage to the existing right-of-way.
Commenter	Washer, Steve
Comment I-645-1	I WOULD LIKE FOR AMTRAK TO INCREASE SPEEDS OF 175 MPH OR 195 MPH
Response	Thank you for your comments concerning very high speed train technologies, which were considered in the Tier 1 EIS for the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, it was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Wasiutynski, Christopher
Comment I-646-1	Assumptions about rolling stock, necessary to calculate trip-times, must be clearly stated. Is the assumption a F32 locomotive, 6 Amfleet cars? If not 8 or 9 cars would give different performance.
Response	Thank you for your comment. Equipment for rolling stock for the Preferred Alternative is addressed in Chapter 3 and Appendix E of the Tier 1 EIS. The acquisition of trainsets/locomotives and coaches to support service expansion is addressed in the Service Development Plan. Equipment selections and specifications will be further reviewed and evaluated as the program moves forward in the Tier 2 assessments.

Commenter	Wasiutynski, Christopher
Comment I-646-2	“New Rolling-Stock” in options 90A, 90B, 110: would it have similar or difference performance?
Response	Thank you for your comments regarding new train set performance for the alternatives considered. The operating performance is similar for the new rolling stock in the different alternatives, and, as addressed in the preceding response, equipment and equipment needs for the alternatives are outlined in the Tier 1 FEIS and the Service Development Plan.
Commenter	Wasiutynski, Christopher
Comment I-646-3	Locomotive change at Albany: this adds 10 to 20 minutes. Do trip times for 90A, 90B, 110 alternatives assume a locomotive change, or not?
Response	Operating plans for the alternatives include the provisions at Albany-Rensselaer for changing of crews and operating requirements (servicing of locomotives and passenger coaches). Albany-Rensselaer is the main crew headquarter and equipment servicing location on the Empire Corridor between New York City and Niagara Falls.
Commenter	Wasiutynski, Christopher
Comment I-646-4	125 mph diesel locomotives are being ordered from Siemens, with Cummins QSR95 diesel motors, by a consortium of 5 states with funding by FRA (32 locomotives) 4.a. These provide a different 125 Alternative, costing about \$1 billion less without electrification.
Response	Thank you for your comments on the diesel engine locomotives for Alternative 125 for the High Speed Empire Corridor Program, which have been considered by the FRA and in the selection of the Alternative 90B as the Preferred Alternative.
Commenter	Wasiutynski, Christopher
Comment I-646-5	These lighter weight, more powerful 4000 HP locomotives will give higher performance even in the 110 alternative. Travel Times with these locomotives should be re-calculated. Since these 125 MPH locomotives have AC drive, a dual-mode version should be easy to produce.
Response	Thank you for your comments on operation with dual-mode locomotives, which is a requirement in the operation of trains between New York City and Albany-Rensselaer in the Hudson Valley. Consideration for the next generation of dual-mode locomotives for this route will include the performance standards necessary for achieving the trip times and maximum operating speeds.
Commenter	Wasiutynski, Christopher
Comment I-646-6	At the Poughkeepsie hearing on the Tier 1 DEIS for the High Speed Rail Empire Corridor Program, you told me that you would be interested in getting more information on the 125 mph Diesel locomotives which are being ordered by a consortium of 5 Midwestern and Western states headed by Illinois DOT. I promised to send links to information. LINKS are given below. I think the availability of `125 mph diesel locomotives has implications for the Empire Corridor Program under 4 headings: (1) An alternative version of the 125 option, not requiring electrification; (2) Reduced travel times for the 110 option, due to higher performance; (3) Higher speeds up to 125 mph may be possible on some segments, in the 110 option, giving a third 'low-impact' 125 option; (4) Dual-Mode version of the locomotive should be easy to produce. I attach brief discussions of these 4 issues following the links.

Response	Thank you for your comments, which have been considered in the selection of Alternative 90B as the Preferred Alternative. In the Tier 2 assessments, the FRA and NYSDOT will be reviewing the types of locomotives and rolling stock necessary for High Speed Rail Empire Corridor Program.
Commenter	Wasiutynski, Christopher
Comment I-646-7	Availability of 125 mph diesel locomotives provides an alternative variant of the 125 option, without electrification. Under NEPA ('alternatives to the proposed action') this should be mentioned in the EIS, as a 125 sub-option. The biggest difference will probably be about \$1 billion lower cost, by omitting electric catenary, substations etc. The performance of the 125 mph diesel locomotives may also differ from performance of electric locomotives, yielding different trip times. (2) Re-calculate travel times for the 110 option: the 125 mph locomotives are more powerful, 4000 hp instead of 3200 hp for the Dual-Mode GE P32DM locomotives now used on the Empire Corridor, whose continued use is assumed in the DEIS. They will also be lighter.
Response	Thank you for your comment. The Tier 1 EIS discusses the types of energy used for trains in Chapter 3 and Section 4.20. For Alternative 125, a dual mode diesel-electric locomotive was considered.
Commenter	Wasiutynski, Christopher
Comment I-646-8	Possible higher speeds in an 'upgraded 110' option. it may be possible to increase speeds on some segments such as Rochester-Buffalo and Syracuse-Utica where there is less curvature, using the 125 mph locomotives and allowing speeds above 110 mph where possible. Travel times might be slightly faster. This might be labelled as a new 'Low-Impact 125 option.'
Response	Thank you for your suggestions regarding opportunities to achieve high speeds and faster service times for Alternative 110. However, Alternative 90B has been selected as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Moreover, Alternative 90B would have fewer environmental impacts than Alternative 110. The operating speeds outlined for each of the alternatives discussed in the Tier 1 EIS of the High Speed Rail Empire Corridor Program are determined by thresholds for speeds that correlate with different classes of tracks established by the FRA. Increases to operating speeds of the trains will need to reflect FRA requirements for both the infrastructure and train operations. In the future, additional improvements to the right of way may be required in areas to raise maximum authorized speeds.
Commenter	Wasiutynski, Christopher
Comment I-646-9	Dual-Mode Version of Locomotive. The 35 locomotives in the Illinois DOT order are not dual-mode. However, Siemens states that they have AC motors, which implies that a dual-mode version with third-rail electric pickup should be easy for Siemens to produce, since the power electronics used with AC motors includes virtually all that is needed to control power flow from the third rail. (That is the reason why the GE dual-mode locomotives now used between New York City and Albany have AC motors, unlike most of Amtrak's GE locomotives. The AC circuitry includes circuitry needed to control third-rail power).
Response	Thank you for your comments. Locomotive and rolling stock performance and specifications will be reviewed by the FRA and NYSDOT in advancing the Preferred Alternative outlined in the Tier 1 EIS for the High Speed Rail Empire Corridor Program. It

	should be noted that the locomotives utilized on the Empire Corridor need to be able to function on a 600 volt Direct Current (DC) third rail and locomotives equipped with Alternating Current (AC) traction motors need to carry inverter systems to convert the DC power to AC power, adding to the complexity in the locomotive design.
Commenter	Wasiutynski, Christopher
Comment I-646-10	Unstated Assumptions about Rolling Stock Need to be Clarified. That assumption should be explicitly stated..
Response	Thank you for your comments. The Tier 1 FEIS (Chapter 3 and Appendix E) and the Service Development Plan outlines the assumptions for locomotives and rolling stock.
Commenter	Wasiutynski, Christopher
Comment I-646-11	Unexplained Assumption: 'New Rolling-Stock' in Alternatives 90A, 90B, 110: Will this 'New Rolling-Stock' have different performance from :present rolling-stock, affecting trip times? If so, how will it differ? If not, please state that performance will be unchanged.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The assumptions for locomotives and rolling stock performance are outlined in the Tier 1 FEIS and SDP (as addressed in the preceding response), and the trip times are defined for the Preferred Alternative.
Commenter	Wasiutynski, Christopher
Comment I-646-12	Unclear Assumption: the Costly and Time-Consuming Locomotive Change in Albany: Do travel times in Alternatives 90A, 90B, 110 assume that locomotives will continue to be changed in Albany? Or do they assume no locomotive change? What assumption is being made?
Response	Thank you for your comment. Operating plans for the alternatives include the provisions at Albany-Rensselaer for changing of crews and operating requirements (servicing of locomotives and passenger coaches). Albany-Rensselaer is the main crew headquarter and equipment servicing location on the Empire Corridor between New York City and Niagara Falls. These assumptions are outlined in the Tier 1 FEIS and SDP.
Commenter	Wasiutynski, Christopher
Comment I-646-13	125 mph Siemens Diesel Locomotives: On March 18, 2014, an order was placed by five States headed by Illinois DOT for thirty-two high-speed 125 mph 'Charger' diesel locomotives to be supplied by Siemens with Cummins QSK95 diesel motors, with an option for 225 additional locomotives. These locomotives with 4400 horsepower and a lighter weight of 120 tons will offer higher performance than the current General Electric P32DM locomotives. What trip times on the Empire Corridor would result from use of these locomotives? (I mentioned these 125 mph locomotives in an E-mail to Marie Corrado, Director, Major Projects Office, NYSDOT, who replied that my comments will be incorporated in this record).
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The performance and specifications of locomotives and rolling stock, as outlined in the Tier 1 EIS and Service Development Plan, will be further developed for the Preferred Alternative in the Tier 2 assessments.
Commenter	Wasiutynski, Christopher
Comment I-646-14	Superelevation of New Third Track, 110 Alternative: Please State What Assumption is Made in the DEIS:

If higher superelevation for the third track is assumed in the DEIS, leading to faster trip times, the DEIS should so state. What maximum superelevation on the third track is assumed?

Response Thank you for your comments. Alternative 110 has been dismissed from further consideration, however, assumptions regarding the conceptual design for Alternative 110 are discussed in Chapter 3 and Appendix C of the Tier 1 EIS. Track super-elevations will have to comply with FRA requirements for different classes of tracks. The Tier 1 EIS compared the alternatives based on conceptual design, and Tier 2 assessments will advance designs for Alternative 90B, the Preferred Alternative.

Commenter Wasiutynski, Christopher

Comment I-646-15 Question: When the New York Central RR operated extensive passenger services from 1935 to 1955 on a 4-track railroad with separate tracks for Express and Local trains, what was the maximum superelevation on Express tracks?

Response Thank you for your question regarding track super-elevations on the New York Central Railroad. The New York Central used a formula for determining the super-elevation in curves based on the degree of curvature, length of the curve, desired operating speed and adjoining track alignment. The company followed a practice of allowing a maximum of 6 inches of super elevation per their engineering standards.

Commenter Wasiutynski, Christopher

Comment I-646-16 Lack of Coordination with Local Transit: A Very Important Issue which Deserves to be Mentioned.

Response Thank you for your comments on transit connections. Transit connection opportunities are addressed in the Service Development Plan, and have been considered in design of new stations built as separate projects, including those constructed at Albany-Rensselaer, Syracuse, Rochester, Buffalo-Exchange Street Station, and Niagara Falls.

Commenter Wasiutynski, Christopher

Comment I-646-17 I am not suggesting that the DEIS provide detailed plans for Amtrak - bus transit coordination. But I believe the DEIS needs to state clearly and emphatically that this is an important issue. To assume that intercity rail can attract good ridership while remaining un-integrated with local transit is totally unrealistic.

Response Thank you for your comment. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor and to improve reliability, travel times, levels of train service and passenger amenities. Transit connections are identified in the Service Development Plan, which also identifies station improvements and amenities and opportunities to build on current intermodal connections along the route.

Commenter Wasiutynski, Christopher

Comment I-646-18 Is the 'Upstate' rail travel market restricted to persons travelling to and from New York City? If not, then the schedule just described, where all trains must either originate or terminate at Penn Station in Manhattan, will be inadequate for travellers within the Albany - Buffalo corridor.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The market and ridership analysis for the program is documented in Appendix B, and includes all of the Amtrak stations and major markets along Empire Corridor between New York City and Niagara Falls. Improvements to schedules and the frequency of train trips along the route were evaluated in the Service Development Plan and the Tier 1 EIS.

Commenter	Wasiutynski, Christopher
Comment I-646-19	If reductions in trip times greater than those achieved in the 110 Alternative are a priority, then consideration should be given to tilt-body trains.
Response	Thank you for your comment supporting the 110 Alternative. Alternative 90B would provide substantial travel time savings, but would constrain more of the additional trackage within the existing right-of-way than Alternative 110. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative. Consideration of the types of locomotives and rolling stock will be further evaluated in the Tier 2 assessments. The use of tilt trains on the route may present a challenge where the clearances of the tilt train wheel and axle assemblies may not meet the recommended allowances to operate on lines equipped with third rail. The Empire Corridor trains must use Metro North Railroad and Pennsylvania Station, New York, where both sections of the route utilize third rail for providing electric current for train operations.
Commenter	Waszkiewicz, Ed (Butch)
Comment I-647-1	DO NOT PASS BY UTICA and ROME with High Speed Rail. YES for 110. NO for `125
Response	Your comments about preserving and offering intercity rail passenger service for the cities of Utica and Rome have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Alternative 90B was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 EIS, Alternative 90B would increase service to Utica.
Commenter	Weekes, Michael
Comment I-648-1	I recommend option 90A and look forward in the not too distant future to a national solution utilizing the 220 MPH capability
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, relating to Alternative 90A, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90A improvements are included in the Preferred Alternative.
Commenter	Weekes, Michael
Comment I-648-2	Five factors will drive the effectiveness of the effort: leadership, process, people, technology, and performance measures. I would be glad to help support the development and deployment of any key activities related to the initiative.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Weekes, Michael

Comment I-648-3	My review of the alternatives seems to reveal that 90A would be the best alternative unless certain factors like cost or ridership are weighted other than they appear to be.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, in support of Alternative 90A, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The Alternative 90A improvements are incorporated into the Preferred Alternative.
Commenter	Welch, Alan
Comment I-649-1	I believe Alternative 125 is the best course of action for the Empire Corridor.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program and Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. This alternative will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).
Commenter	Welch, Alan
Comment I-649-2	If we lay the foundation now, alternatives 160 and 220 could become more feasible in the distant future. I think it is more important to build the Empire Corridor West first, as there needs to be station improvements and the 247-mile stop of track to be built.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing rail network, and development that was within possible funding levels and time constraints for construction. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125.
Commenter	Welker, Richard
Comment I-650-1	I believe utilization of the Buffalo Central Terminal would be beneficial to HS Rail in the US
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee,

tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Wells, Maurice

Comment I-651-1 I would like to add my support for the New York State High Speed Rail Empire Program.

Response Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Westcott, Lynn

Comment I-652-1 Please consider the Buffalo Central Terminal as part of a future New York State high speed rail system.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-650-1.

Commenter Westermann, Kevin

Comment I-653-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-650-1.

Commenter Whipple, John

Comment I-654-1 Wonderfull to get an updated train line in the state.

Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Whipple, John
Comment I-654-2	However we need the train station to be in the Capital in ALBANY (downtown) with another train station up town. The Rensselaer train station with a cab into the city is an option that does not work well. Please move the Albany-Ren station into the city of Albany.
Response	Thank you for your comment regarding a new station in Albany. The Tier 1 EIS for the High Speed Rail Empire Corridor Program is evaluating a range of corridor-level service improvements for intercity passenger rail with the purpose of making decisions on system wide levels of service, including service reliability, frequency, and train speeds. The Tier 1 EIS considers using the existing stations along Empire Corridor. The inclusion of additional stations along the Empire Corridor could be part of future studies for expanding service.
Commenter	White, Toney
Comment I-655-1	Please consider high speed rail through the Buffalo Central Terminal. Strategic placed and historically revitalizing to the entire region and Historic Polonia neighborhood.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-650-1.
Commenter	Moskowitz, Ed (Butch)
Comment I-656-1	I can imagine myself as a customer of the Adirondack Scenic Railroad coming in from New York City or Buffalo and coming by High Speed Rail and getting off at this station rather than at another station or have to get there than here, so I'm in favor of 110 from that standpoint. A couple of people said this evening we paid for the High Speed Rail, we want it here. And third, I am an individual of the Chamber of Commerce and as such, I will be very disappointed if the High Speed Rail does not stop here.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Alternative 90B was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.
Commenter	Moskowitz, Ed (Butch)
Comment I-656-2	Another is groups of college students. If you come here in the weekends when there are college kids -- I've seen Hamilton College, I've seen Utica College vans outside these doors

and many others. They should not have to go to an alternate station to get to the High Speed Rail, and just customers generally.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS focuses on improvements and alternatives on or near the current alignment of the rail passenger service between Albany and Niagara Falls, New York. Additional alternatives that were considered and eliminated from further study can be found in Chapter 3 of the Tier 1 EIS. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT, selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts.

Commenter Moskowitz, Ed (Butch)

Comment I-656-3 I'm here in favor of 110 and I'm totally against 125. I don't speak just for Utica and Rome, there's a couple others, Schenectady and Amsterdam. It's good for all of us, and what about the Naval Science. Could you imagine the Naval scientists being in New York City and he or she wants to get on the train to get to Utica and hop on the fast train, the High Speed Rail, and it goes right by Utica, that just doesn't cut it.

Response Thank you for your comments, relating to Alternatives 110 and 125, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative, for the reasons outlined in the above response. As noted in the Tier 1 FEIS, Alternative 90B would double the service frequency along Empire Corridor West for the service leg that includes Utica and Rome. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered and would increase ridership by 1 million over the Base Alternative.

Commenter Wiesner, Devin

Comment I-657-1 If this is viewed as a project that will be in existence for 50 to 100 years then I support the larger, more expensive upgrades
It seems to me that the corridor between Schenectady and New York should also receive significant improvements as the number of riders is so high.

Response Thank you for your comment in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.

Commenter Williams, Collin

Comment I-658-1 I believe that New York should not implement the plan for high speed rails until we see the result of them in California, since California seems be far ahead of the project in New York. If the project is not successful there, I believe it is a good indicator of how the people of New York will react to essentially the same project.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.

Commenter Williams, Maureen R.

Comment I-659-1 However – I strongly feel that a train from Utica to Lake Placid would do well – all of us athletic people – hike-bike-boat-ski-roller blade would use it. It appears Utica is not even on the map

Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Improvements in Empire Service would also improve service on regional lines that use the same trackage, such as Amtrak's Adirondack Line. However, the Adirondack Scenic Railroad, a separate right of way, would not follow the areas outlined in the program and does not service the same cities as the Empire Corridor.
Commenter	Wilson, Bonnie
Comment I-660-1	I know that the cost is huge and my concern is that I don't feel this would benefit the majority of New Yorkers. The proposed rail-line would not greatly speed-up transportation and to spend money on this at a time when our highways and bridges are in such desperate need of repair and replacement seems very wasteful to say the least. Financial concerns have had a lot of project on hold for some time.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT as part of the review process for the Tier 1 EIS.
Commenter	Wilson, Bonnie
Comment I-660-2	Let's concentrate on updating what we have and forget about a rail system that is not necessary at this time and does not help the majority of people.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Environmental and economic concerns, operating benefits, capital requirements, and responsiveness to passenger needs have been considered by the FRA and NYSDOT in selecting the Preferred Alternative.
Commenter	Winship, Micah
Comment I-661-1	As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons: -The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy. -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York -The Terminal is centrally located within a two-mile radius of city-center -The Terminal also has secure parking facilities for up to 450 vehicles -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee,

tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Wisinski, Patrick J.

Comment I-662-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Wnorowski, Mark

Comment I-663-1 The scope of the Empire Corridor Tier 1 Draft EIS is too narrow and too conservative.

Response Thank you for your comments. The scope of the High Speed Rail Empire Corridor Tier 1 EIS is consistent with the program purpose and need and requirements of the tiered NEPA/SEQR process. The transportation and environmental evaluations focused on discussing the different alternatives outlined in the Tier 1 EIS.

Commenter Wnorowski, Mark

Comment I-663-2 There is an assumption that current congestion in Pennsylvania Station in New York City will not be relieved. The Long Island Rail Road will complete it East Side Access project. That will free up capacity in Penn. Station. Amtrak will add capacity with it's Gateway Project.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Operations at Penn Station in New York will be organized around a number of factors as the Long Island Rail Road begins operations of their East Side Access service. It is anticipated that Amtrak operations, on the Northeast Corridor, will grow with the Gateway Project and repairs to the current North River Tunnels. The continued use of the station by New Jersey Transit and Metropolitan Transportation Authority will introduce Metro North Railroad service into Penn Station to allow their riders to access new employment opportunities on the West Side of Manhattan.

Commenter	Wnorowski, Mark
Comment I-663-3	People in Amsterdam and Rome could drive or be driven or take a bus or taxi to a nearby high speed rail station as people in places not Rome or Amsterdam will.
Response	Thank you for your comments, relating to the support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would increase the frequency of service to stations on the west such as Rome and Amsterdam.
Commenter	Wnorowski, Mark
Comment I-663-4	If we build a system capable of 125 miles per hour they will run on it at 125. Amtrak is planning on having trains capable of 220 miles per hour someday. If we build a 125 mile per hour system we will not be able to take advantage of those speeds. Building a 125 mile per hour system, between Albany and Buffalo, is not going to be significantly cheaper than building one capable of 220 miles per hour some day.
Response	Thank you for your comment concerning train technologies considered in the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative). Alternative 90B would involve less right-of-way and environmental impacts than Alternatives 110 and 125. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Wokan, Sara
Comment I-664-1	Why is no hearing scheduled in the Southern Tier? Is the railroad going to bypass us along with everything else that has? Does Albany realize that NY has a Southern Tier??
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Improvements to the service to be operated as part of the High Speed Rail Empire Corridor Program are focused between Niagara Falls and New York City. Additional routes out of this corridor are not being considered at this time as part of the program.
Commenter	Wolf, Phillips
Comment I-665-1	In favor of the “110” option
Response	Your comment in support of 110 Alternative has been considered by FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Wolfe, Greg
Comment I-666-1	Bring high speed rail to buffalo!!

Response	Thank you for your comments in support of bringing high speed rail service to Buffalo, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. The frequency of service to Buffalo stations will also increase.
Commenter	Wolfe, Wm. F.
Comment I-667-1	I support any upgrade and expansion to AMTRAK that is feasible and makes economic sense.
Response	Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Wolfe, Wm. F.
Comment I-667-2	I am contacting you about a smaller issue, and that would be the upgrading of the remaining 90 miles of the former New York Central Adirondack Division between Big Moose and Lake Placid. The Adirondack Scenic Railroad operates the Utica to Big Moose section and the Saranac Lake to Lake Placid section. In the past 21 years, they have safely moved over a million passengers. High-speed rail is not needed here!
Response	Thank you for commenting on upgrading the Adirondack Scenic Railroad north of Utica. Currently, the High Speed Rail Empire Corridor Program is focused on improvements between New York City and Niagara Falls. Extending improvements beyond the area outlined by the alternatives in the Tier 1 EIS is not being considered at this time as part of the program, but could be part of future studies for expanding service as part of a separate project.
Commenter	Wolfe, Wm. F.
Comment I-667-3	Finally, one thing other than the track upgrade is needed, and that is a clear plan and procedure for interchanging private cars or chartered equipment from AMTRAK at Utica onto the Adirondack Scenic. CSX, AMTRAK, MA&N and ASR have issues involving union agreements, trackage rights, liability insurance and CSX is hostile to any type of passenger operation. Breaking that log jam is as necessary as upgrading the track.
Response	Thank you for your comments. The purpose of the High Speed Rail Empire Corridor Program is to introduce higher passenger train speeds on the Empire Corridor between New York City and Niagara Falls. Utica's train station has been extensively restored in partnership with Oneida County, and recently had an additional platform constructed on the westbound side that also provides connections with the Adirondack Scenic Railroad.
Commenter	Wolff, Adam
Comment I-668-1	I strongly recommend integrating the historic Buffalo Central Terminal in the EIS
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the need for station improvements in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo, including a new station development at Buffalo-Exchange Street and updates at the Buffalo-Depew Station, are discussed in the response to Comment I-661-1.
Commenter	Woolley, Jonathan

Comment I-669-1	I also believe the study should investigate ensuring good connections between the rail lines (both the potential 125mph HSR line and the improved current rail line) and local transit
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered in selecting Alternative 90B as the Preferred Alternative. The Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. Station locations identified in the Tier 1 EIS, in most cases, provide access to the public for public transit. The Service Development Plan identifies transit opportunities at station sites, many of which have been reconstructed as part of separate projects. For station projects, opportunities for multimodal connectivity have been, or can be, pursued with the local municipality and transit provider.
Commenter	Woolley, Jonathan
Comment I-669-2	There really is no reason the speed limit between Spuyten Duyvil and Albany-Ren. should be less than 110 mph as it is a pretty straight, flat line of track, this study should look at increasing that stretch to at least 110 mph, or, better yet, faster.
Response	Thank you for your comments regarding train operating speeds between New York City and Albany. Increasing operating speeds on the Empire Corridor, between New York City and Albany-Rensselaer, presents many challenges. In the lower section of the route on Metro North Railroad, curves following the shore line of the Hudson River limit opportunities for increasing speeds. The sections of tangent track on the route are not continuous, and the possibilities for straightening the tracks are constrained by the river shore on one side and limited available properties. Further to the north, Amtrak and NYSDOT have been cooperating for a number of years to reduce running times and increase track speeds. Currently, the route is engineered for 110 miles per hour between Stuyvesant and Albany-Rensselaer.
Commenter	Woolley, Jonathan
Comment I-669-3	It should also be possible to build additional tracks north of Poughkeepsie to allow freight and passenger trains to pass each other as this should be a four track right-of-way, perhaps using a sensor fence system, to allow passing at faster than 110 mph. Additionally, the study should consider an additional track connecting into the Penn Station terminal fan in New York City; such a track would prevent a loss of service in the event of a breakdown in the existing tunnel.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Appendix B of the Tier 1 EIS developed track alignments for each of the alternatives. Future projects have been identified for the Hudson Valley route that includes additional tracks on the Metro North Railroad portion of the route. Improvements to the Penn Station area will need to be coordinated with other projects in that location. This area is constricted by the close proximity to the Empire Connection tunnel and the North River Tunnels and is constricted by the ability to pass beneath the Long Island Rail Road's entrance to their West Side Yard facility.
Commenter	Woolley, Jonathan
Comment I-669-4	both south and west of Albany, building more grade-separated junctions may have to be considered to achieve this reliability, and the long term savings in terms of speed maintenance, as well as both accident prevention a reduction in insurance liability, may be worth the cost.
Response	Thank you for your comments regarding potential improvements needed on the Empire Corridor to achieve improved reliability, speed and safety. In developing the alternatives discussed in the Tier 1 EIS of the High Speed Rail Empire Corridor Program (Appendix B),

track alignments and supporting projects have been identified to support each of the options. The option of constructing grade separated junctions in the section between New York City and Albany-Rensselaer may be limited by the close proximity of the route to the Hudson River. However, in the 90B and 110 Alternatives, several grade separated junctions, or crossovers, are included in track arrangements to expedite the movements near Syracuse and Rochester. The connection of the passenger line from Albany-Rensselaer, with the freight line from Selkirk, west of Schenectady, is already designed to allow the routes to meet without conflicting movements.

Commenter Woolley, Jonathan

Comment I-669-5 I support the goal of this study to enhance both passenger and freight rail in the Empire Corridor.

Response Thank you for your comments, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The importance of preserving and improving freight rail traffic to the economy of New York State have been an important factor in the selection of the Preferred Alternative.

Commenter Woolley, Jonathan

Comment I-669-6 I support the choice of alternatives of 110 or 125 miles per hour service. I would prefer to see service of 125 miles per hour, as I think the improvements that would result would most benefit the public, but am aware the delay in implementation until at least the mid-2030's (and likely later) might not make this the best choice. However, if improvements to only 110 mph are chosen, then I believe that improvements to 125 mph should be made as soon as subsequently possible.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Of the three higher speed Build Alternatives (90B, 110 mph and 125 mph) evaluated in the Tier 1 EIS, Alternative 90B would involve the lowest cost (less than half the cost of the most expensive alternative for 125 mph service), while providing the best overall on-time performance and the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 90B would also constrain the majority of work within the right-of-way, involving fewer environmental impacts than Alternatives 110 and 125.

Commenter Wozniak, Mark

Comment I-670-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- The Terminal is centrally located within a two-mile radius of city-center
- The Terminal also has secure parking facilities for up to 450 vehicles
- The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
- The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for

certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Wright, Nancy

Comment I-671-1 As a supporter of the National Landmark known as the Buffalo Central Terminal, I would like to take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project ? Tier I EIS for the following reasons:

- The terminal is easily accessible from Toronto and other points North.
- It is the half way point between Chicago and NYC.
- It is a project already in progress with rail lines running to the area.
- The terminal is an integral part of Buffalo's historic architecture and therefore would be a beautiful destination for those traveling on the high speed rail.
- The building complex is huge so as much area as needed could be found to accommodate the needs of a high speed rail operation including parking, bus and taxi pick-up areas, passenger embarking and disembarking needs, baggage collection and distribution, restrooms, and restaurant facilities.
- Because the building complex is huge the rapid transit rail would not be the only tenant. Other tenants would be helping to support the complex.
- Buffalo and the surrounding area has a large, diverse workforce to fill positions as needed.
- Buffalo has many attractions including a thriving theater district, many diverse restaurants (both local and national) and a developing water front to draw people to the area.
- ? economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
- ? The Terminal is centrally located within a two-mile radius of city-center

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the prior response.

Commenter Yanik, John S.

Comment I-672-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

- The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
- The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities,

an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for certification and degree programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-670-1.

Commenter Young, Dennis

Comment I-673-1 I am writing to request that you approve the full-blown version of implementing cross-state, intercity high-speed rail in New York state.

Response Your comments in support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.

Commenter Young, Dennis

Comment I-673-2 Please implement the High-Speed Rail 125 option.

Response Thank you for your comments, relating to Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, a program of improvements largely situated within the existing rights-of-way, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve far fewer environmental impacts than the other Build Alternatives considered.

Commenter Young, Jennifer

Comment I-674-1 As a supporter of the National Historic Landmark, Buffalo Central Terminal, I would like take a moment to voice my support regarding the Terminal's use for future High Speed Rail aka Empire Corridor Project Tier I EIS for the following reasons:

-The Terminal is an integral Tourism site in New York State due to its architectural design and transportation legacy.
 -The Terminal is currently working with various future tenants and funders for a major adaptive reuse project of the complex which will, in turn, create educational opportunities, an active Arts center, workforce and economic development and neighborhood reinvestment in the Broadway Fillmore District of Buffalo, New York
 -The Terminal is centrally located within a two-mile radius of city-center
 -The Terminal also has secure parking facilities for up to 450 vehicles
 -The Terminal already has a Main Concourse for travelers to dine and shop adding to the tourism and economic values for entrepreneurship and small business development
 -The Terminal will also house education classrooms and shared space accommodations for local, regional, state and national colleges and universities to locate essential classes for

certification and degreed programs in adaptive reuse studies thereby creating a benchmark for historic rehabilitation and restoration

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-670-1.

Commenter Young, Michael

Comment I-675-1 Given the alternatives proposed and the impacts considered in the DEIS, I suggest choosing Alternative 110 for the Empire Corridor High Speed Rail project.

Response Thank you for your comment and support of 110 Alternative, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered (see Exhibit 6-8 in the Tier 1 FEIS). Moreover, Alternative 90B would incur lower costs and fewer environmental impacts than Alternatives 110.

Commenter Zaffuts, Michael

Comment I-676-1 I am writing to voice my support for the expansion of a high speed rail system through the state.

Response Your comments supporting the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Zalucki, Richard

Comment I-677-1 Just a comment that I use Amtrak between Albany & NYC approx. 6 times per year and would LOVE to see travel time reduced.

Response Your comments in support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would shorten the trip from New York City to Niagara Falls by 1½ hours.

Commenter Zamow, Allie

Comment I-678-1 I vote for alternative 125, let's get NYS up to speed!

Response Thank you for your comments in support of Alternative 125 and the High Speed Rail Empire Corridor Program, which have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative. In selecting Alternative 90B as the Preferred Alternative, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Zarabozo, Peter

Comment I-679-1 I think the plan for high speed rail in the empire corridor is an excellent idea. I strongly support this initiative.

Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program. Comments from the public have been considered by the FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Roate, Connell
Comment I-680-1	Although, I'd love to see the 125, I think the dedicated extra railway is going to leave out quite a few of the cities, mainly Utica, Rome, Schenectady and Amsterdam, and the build-out time would be a lot longer on the 125.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as Preferred Alternative. Because it is situated largely within the existing right-of-way, it can be constructed in substantially less time than Alternative 125 and will begin to confer benefits within 2 to 5 years after start of construction. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. As discussed in Chapter 3 of the Tier 1 EIS, the Preferred Alternative would increase service to Utica Rome, Schenectady and Amsterdam.
Commenter	Robinson, Martin
Comment I-681-1	Four out of five of the speeds proposed here at this presentation don't meet the Federal requirements to be labeled as high speed, let alone the possible public perception of high speed rail... In the 1940s, many of the speeds that are listed here that would be slightly higher in average, used to be the regular speeds for trains in the 1940s. I mean, trains used to average between 60 and 70 miles per hour with express routes often hitting the 80 to 90 per hour on a regular basis.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. Section 3.1, of the Tier 1 EIS, describes FRA's definitions of high-speed rail. The FRA, which was tasked by Congress to implement the High-Speed Intercity Passenger Rail (HSIPR) Program, has defined three (3) categories of high-speed rail: Core Express (speeds 125-250+ mph); Regional (speeds between 90-125 mph); and Emerging (speeds up to between 90 mph). The Preferred Alternatives (Alternative 90B) for the Empire Corridor program is classified as Emerging and Regional and therefore qualifies to be called a "high-speed rail" project.
Commenter	Switzer, James
Comment I-682-1	I'm curious as to how much of the funding of this is going to be taxes or whatever.
Response	Thank you for your comments on funding. Future funding for the program has not been determined at this time.
Commenter	Switzer, James
Comment I-682-2	I'm a construction worker and I'd like to see that the work is done locally with local workers in the -- in municipalities that the train goes through.
Response	Thank you for your comments. Individual projects or groups of projects will be advanced according to the Service Development Plan to Tier 2 environmental evaluations and design development. Selection of contractors and workers has not been determined at this time.
Commenter	Tucker, Donald

Comment I-683-1	I am very much for improving rail service in New York both to Albany and to New York City. I think it makes environmental sense.
Response	Your comments in support of the High Speed Rail Empire Corridor Program have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Tucker, Donald
Comment I-683-2	I would like the 110 proposal.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program and Alternative 110, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisition, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance.
Commenter	Wieczorek, Rich
Comment I-684-1	I'm in favor of the high speed rail.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Wieczorek, Rich
Comment I-684-2	My concern; I have two private crossings, the 110-mile one, corridor building, I think that's a little too much. I have concern with building new line, is it going to be like the thruway and what's it going to do the land where it's already -- where it's going to be proposed to go through? I don't believe we can afford to lose anymore farmland in this state or in this country, having suffered what the New York State thruway did to my family's farm. Just come and take it and, well, we'll cut you off from the other 40 acres and tough. Anyways, that aside, I'm concerned with having private crossings, what the impact there is going to be as far as safety. The other thing I noticed, one of the gentleman here from the DOT was showing me on one of the books over here, a proposed access road that would run parallel to the CSX corridor. Again, you going to drive back through my front yard now or what? That -- that's kind of where my concerns are, the safety issues on this and how they are going to be addressed.
Response	Thank you for commenting on the High Speed Rail Empire Corridor Program. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and environmental impacts. Chapters 2 and 3 of the Tier 1 EIS address safety for the existing corridor and the program alternatives. The designs for each improvement or project for the Preferred Alternative would be further refined and advanced in the Tier 2 assessments, including further reviews for public access and grade crossings and analysis to determine procedures for maintenance of the tracks and access to the rail infrastructure.
Commenter	Alberin, Ken
Comment I-685-1	Somehow Utica seems to be conspicuously left out from the process as we are not going to be a stop on this network. With the drone base coming along, I think you ought to consider including the Utica Train Station in the high speed options that are coming down the pike.

Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. Alternative 90B was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.
Commenter	Russell, Gary
Comment I-686-1	I guess some of my questions are projected annual ridership. Is it -- What's it really based on? Is it somewhat of a guess?
Response	Thank you for your comments on ridership patterns on the High Speed Rail Empire Corridor. A detailed assessment of market demand and projected ridership was completed for each of the alternatives discussed in the Tier 1 EIS. Chapter 2 documents historic/existing ridership for Empire Corridor, Metro-North commuter rail, and stations, based on actual usage, and Appendix B: Ridership and Revenue Forecasting provides details on forecasting. Ridership and revenue performance have been important considerations in selecting the Preferred Alternative.
Commenter	Russell, Gary
Comment I-686-2	Is there -- is there, like, a study of percentage of the cars have to be full, cost analysis to break even on, you know, operation, maintenance? Is there something out there we can read about that? I mean, do they have these 25 percent full to make money or is the tax payer going to, you know, be subsidizing that money. That -- that was my question.
Response	Thanks you for your comments. Ridership and revenue projections and subsidies are addressed in the Tier 1 EIS (Chapter 6 and Appendix B-Ridership and Revenue Forecasting). The cost analysis, performed for the Tier 1 EIS, considers operating and maintenance costs of the various alternatives. When used in conjunction with projected ridership, the subsidy or surplus per rider can be calculated. All alternatives are projected to have an operating subsidy during the planning horizon. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125. Although Alternative 110 has the lowest subsidy, the subsidy for the Preferred Alternative (Alternative 90B) would be \$13 per rider, which would be lower than both Alternative 125's subsidy per rider of \$14 and the Base Alternative's subsidy per rider of \$17 per rider. Alternative 90B's costs would also be less than that for Alternatives 110 and 125.
Commenter	Barren, Dan
Comment I-687-1	One thing that comes to mind is that the fastest plan for six-hour travel time, I can do that in my car right now. I don't really see the advantage of investing \$15 billion in something I can do right now driving from here to New York City.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Of the three Build Alternatives (90B, 110 mph and 125 mph) evaluated in the Tier 1 EIS, Alternative 90B would involve the lowest cost (less than half the cost of the most expensive alternative for 125 mph service), while providing the best overall on-time performance.
Commenter	Barren, Dan

Comment I-687-2	Another thing that I think should be a big consideration if we do go with the electric high speed rail is where is the energy coming from to power this rail. I hope that it is powered by some sort of combination of solar and wind power, something that's clean and renewable that takes a step forward. I think that three out of the four options are oil based. It's kind of ridiculous especially with electric cars starting to make a big comeback with Tesla and other car companies starting to pick electric cars as the future for transportation.
Response	Thank you for your comments regarding train propulsion methods in the High Speed Rail Empire Corridor Program. The Tier 1 EIS discusses the types of energy used for trains in Chapters 3 and 4. For Alternative 125, a dual mode diesel-electric locomotive was considered. Your suggestion to use electric power for operating the trains would be achieved by Alternative 125, which was dismissed from further consideration in the Tier 1 FEIS. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Equipment selections and specifications will be further reviewed and determined as the program moves forward in Tier 2 assessments.
Commenter	Barren, Dan
Comment I-687-3	Another interesting thing just to kind of correlate to this is the paper just got released by Elon Musk. It's called the Hyperloop which is a kind of innovative high speed transportation concept that I think would be very interesting for the state to take a look at.
Response	Thank you for your comments. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing national and regional rail network on the Northeast Corridor. In developing the alternatives in the Tier 1 EIS for the High Speed Rail Empire Corridor Program, very high speed (VHS) alternatives were considered, but were not selected in part because they were considered to be cost-prohibitive. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Behr, Michael
Comment I-688-1	Speeds of 75 miles to 125 miles is not high speed anymore. 200 miles or 300 miles is out there. The trains in China, India, and South Africa are going faster than you are proposing. I do appreciate that you said "in steps," that you're -- there are further capabilities that will be enhanced to provide higher speeds.
Response	Thank you for your comments. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was also determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public, relating to the different service alternatives, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.
Commenter	Behr, Michael
Comment I-688-2	The other thing in terms of this incremental process might be considered the -- an overhead electric rail so that, instead of using the polluting diesel electric engines, you could use all electric.
Response	Thank you for your comment. Your suggestion to use electric power for operating the trains would be achieved by Alternative 125, which was dismissed from further consideration in the Tier 1 FEIS. The Preferred Alternative, Alternative 90B, was selected over Alternative

125, based on its substantially lower costs, impacts, and its performance. Chapter 3 of the Tier 1 EIS discusses the types of power used in each of the alternatives considered. Equipment selections and specifications will be further reviewed and determined as the program moves forward in Tier 2 assessments.

Commenter Behr, Michael

Comment I-688-3 You mentioned the right of way, that CSX owns it, but Conrail still has priority. If it is not a separate dedicated rail, two things, Conrail has priority over passenger -- Amtrak, that's number one, and, number two, Conrail, with its heavy loads, demolish the road beds.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Alternative 90B would also result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered. These improvements that will reduce congestion, delays and interference between passenger and freight trains will improve safety.

Commenter Behr, Michael

Comment I-688-4 This is an intrastate train. As such, will the DOT maintain the engines as it does in interstate trains.

Response Thank you for the question of train maintenance. Maintenance plans and programs will be further developed as the Preferred Alternative advances in Tier 2 assessments.

Commenter Berger, Richard G.

Comment I-689-1 Having a 125 mile per hour high speed rail is already twenty years from now which is when it's going to be fully implemented is far behind the rest of the world in this type of high speed brand. There is no reason for planning for the past. We should be planning for the future and much higher speeds and a much quicker time. Basically 450 miles between -- on the entire corridor, from New York to Buffalo, and they have that done in six hours in 2035 is ridiculous. That should be a four-hour trip. There is no reason why this should be taking that long. We're having inefficient transportation.

Response Thank you for your comments on the High Speed Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the range of options advanced would be those with trains operating at 90, 110 and 125 miles per hour. It was also determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. Comments from the public relating to the different service alternatives have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative.

Commenter Berger, Richard G.

Comment I-689-2 The one thing I was pleased to see is that you thought even with putting in the dedicated rails for high speed rails only that is a complete lie for only \$14 billion. That's a highly reasonable, as a matter of fact I think, low risk of what it would cost the high speed rail. For instance, one building, new apartment building in New York City has a value of two billion dollars. Here we're making a twenty-year investment for only \$14 billion. By comparison, you can look at what the United States is spending hundreds of billions of dollars each year to support automobile and truck traffic all across the United States.

Response	Thank you for your comments. Economic costs and benefits of each alternative have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Berger, Richard G.
Comment I-689-3	We need to have better, faster rail transportation to connect this country and all parts of it, not just New York and Buffalo and go up to Toronto and from Buffalo to Cleveland, Detroit, Chicago.
Response	Currently, the scope of the Tier 1 EIS focuses on the Empire Corridor from New York City to Niagara Falls, New York, and passenger forecasts conservatively exclude trips that may have one trip end in Toronto or other locations beyond the Empire Corridor. Amtrak regional lines, such as the Maple Leaf and Lake Shore Limited, that traverse the Empire Corridor provide access and connections to the Toronto, Cleveland, and Chicago. Improvements to Empire Corridor service will improve service on these regional lines. Access to Detroit is available through other regional lines. Comments from the public, relating to support of the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.
Commenter	Myers, Tom
Comment I-690-1	I'm a parent here in Rochester and I have a daughter that goes to college in Boston. It's eleven hours by train when it works. There's been times that she's tried to get back and we just couldn't really come up with other ways. And it's twelve/fourteen hours because of a delay around the Albany area. It's just terrible what happens there. So it's not a reliable way for us. I drive to Boston often now to drive my daughter back, partially because it's nice talking to her in the car, but it's a six-hour drive, six-and-a-half-hour drive, for an eleven-hour train. It's just not acceptable.
Response	Thank you for your comments about the need for higher train speeds in the implementation of a high speed rail corridor in New York State. Currently, the High Speed Rail Empire Corridor Program is focused on improvements between New York City and Niagara Falls. Amtrak service to Boston is provided via the Lake Shore Limited Line. The Preferred Alternative will improve service along the Empire Corridor, and improvements to Empire Service will benefit travel on connecting regional lines, including connecting trains to Boston (Adirondack Line). Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.
Commenter	Myers, Tom
Comment I-690-2	A hundred and twenty-five miles is certainly in the right direction, but we need much faster than that eventually also just to make it viable.
Response	Thank you for your comment concerning train technologies considered in the High Speed Rail Empire Corridor Program. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to

construct and require more public resources to operate. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. The Preferred Alternative, Alternative 90B, was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter Catalli, Joseph

Comment I-691-1 I would like to have the 125 also. And, as far as going to Canada, I've got relatives up there and I took the train a couple times last year and I enjoyed it; but, again, it's an hour and a half inspection at the border. But then you make up the time from Niagara Falls, Canada to Toronto.

Response Comments from the public, relating to support of Alternative 125, have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. The Niagara Falls Station Intermodal Transportation Center, which was reconstructed as part of a separate project, was designed to improve the border crossing process.

Commenter Cates, David

Comment I-692-1 I was discussing the corridor and the 125 high speed sounds good except we all know it's going to be trouble when you're taking someone's land.

Response Thank you for your comments in support of Alternative 125 and the High Speed Rail Empire Corridor Program. Your observation notes the need for land acquisitions to build the 125 Alternative. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

Commenter Cates, David

Comment I-692-2 the question came down to being how does it interact with the regional lines and which regional system are they going to have? Are they going to do the basic? Are they going to do 90A/B, whichever? Which one was going to be there to catch you because hypothetically was, okay, I am taking the high speed to Syracuse and waiting for regional training to go back to Schenectady, how long of a wait do I have? Would it be better just to take the regional with it running consistent enough it's a half-hour wait or will it be a two-hour wait?

Response Thank you for your comments. The Preferred Alternative, Alternative 90B, would provide rail service that would operate with more frequent and faster service to Syracuse and Schenectady and other destinations currently served by the Empire Corridor. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered. Operating schedules and the implementation of service initiatives have been investigated in the development of the Service Development Plan. Individual projects that are part of the program will undergo a second evaluation (Tier 2) to further advance the designs. Schedules and frequencies between stations would be further refined in the Tier 2 evaluations.

Commenter Cates, David

Comment I-692-3	That's the main thing, the trains are sharing the tracks with the freight is the biggest problem right now.
Response	Your comments on the High Speed Rail Empire Corridor Program have been considered in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and would involve the least delay-minutes per 100 train miles operated for freight trains of the alternatives considered. Improvement of passenger rail service while maintaining freight operations along the Empire Corridor is one of the major goals for the High Speed Rail Empire Corridor Program.
Commenter	Cates, David
Comment I-692-4	I am leaning towards the 110 now more than anything else just because I think the end result would be nice.
Response	Thank you for your comment in support of the Alternative 110 and the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property. Because of the required property acquisitions, Alternative 110 would have significantly higher costs and greater potential for environmental impacts than Alternative 90B, while only achieving a modest improvement in overall performance. Alternative 90B provides similar trackage as Alternative 110, only situating more of the improvements within the existing right-of-way.
Commenter	Chelbach, Sue
Comment I-693-1	The rest of the world is way ahead economically from a tourist perspective, just everything. I don't think it's enough to do 125.
Response	Your comments on the High Speed Rail Empire Corridor Program have been considered by the FRA and NYSDOT in selecting Alternative 90B as the Preferred Alternative. During the selection of the alternatives for review in the Tier 1 EIS, alternatives with speeds of 160 mph and 220 mph were considered but not advanced. It was determined that the focus would be on a range of options with trains operating at 90, 110 and 125 miles per hour. It was determined that operating trains at higher speeds would have greater impact on the environment, require more financial investment to construct and require more public resources to operate. The Preferred Alternative, Alternative 90B, was selected over Alternatives 110 and 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Tsotsky, Richard
Comment I-694-1	A while ago, I was going some research on a corridor between Toronto and Detroit, and it just seemed that there was much more population or something like that in excess of ten million along that corridor. And thinking as of Buffalo and what would help Buffalo, it seems to me at the time that connecting with those cities with Cleveland, with Toledo, with Detroit, down to Chicago in connection with the, I think it was called the American 2020 plan or Ohio rail plan which also called for extending to Buffalo and opening up the Dunkirk station as well which is between Buffalo and Erie is longer -- it's the longest stretch without a station even longer through Albany to Utica I believe. It just seems as though for Buffalo and Niagara Falls connecting Toronto with Detroit makes much more sense

Response Thank you for your questions regarding the expansion of connections to the Empire Corridor beyond Buffalo and Niagara Falls. Currently, the scope of the Tier 1 EIS focuses on the Empire Corridor from New York City to Niagara Falls. New York and passenger forecasts conservatively exclude trips that may have one trip end in Toronto or other locations beyond the Empire Corridor. Amtrak regional lines, such as the Maple Leaf and Lake Shore Limited, that traverse the Empire Corridor provide access and connections to the Toronto, Cleveland, and Chicago. Improvements to Empire Corridor service will improve service on these regional lines. Access to Detroit is available through other regional lines. The Tier 1 EIS is a corridor level evaluation that considers use of the existing stations only. Extending trains beyond the current study area could possibly be studied in partnership with other states.

Commenter **Tsotsky, Richard**

Comment I beg you that Mr. Chan sent me, two-inch binder, and the southern tier group going from I-694-2 Buffalo, you know, down to the southern tier of New York State to New York City would seem to be better for Buffalo, to connect us directly, forget the other upstate cities, but again it requires buy-in from political leaders, citizens, other groups,

Response Thank you for your comment on the HSR Empire Corridor Program. Currently, the scope of the Tier 1 EIS focuses on the Empire Corridor from New York City to Niagara Falls. The route mentioned (Pocono Corridor) is approximately 80 miles south of the Empire Corridor and does not service the same cities as the Empire Corridor. Additional routes out of this corridor are not being considered at this time as part of the program.

Commenter **Tsotsky, Richard**

Comment my preliminary research indicated and riding the rails indicated that there were a number of stations that weren't in downtowns, that were in urban hubs. I thought the whole I-694-3 rational for high speed rail is to get office workers and people looking for entertainment from downtown to downtown.
You go from Buffalo to Rochester. That is close. That's very close to downtown. You go to Syracuse, that's what two and half miles out from downtown. Utica on the other hand is downtown, and then you're not going to ever get to downtown Albany on the train. I mean to the capital of New York State that we're trying to connect with everything else, you have to get off at Schenectady or Rensselaer.
I don't know what thought was put into rerouting or getting these tracks closer to the urban corridor so we can have smart growth so we can create urban -- I mean transit-oriented element and density and all of those other principles that should go hand in hand with the siding of the train house -- or I mean the rail house.

Response Thank you for your comment regarding the location of stations on the Empire Corridor. The Tier 1 EIS for the High Speed Rail Empire Corridor Program evaluates a range of corridor-level service improvements for intercity passenger rail with the purpose of making decisions on system wide level service, including service reliability, frequency, and train speeds. The focus was on using existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. At Rochester, the existing station was reconstructed by NYSDOT in partnership with FRA, Amtrak, and the City of Rochester. In Syracuse, a new station was built, that provides intermodal connections with other bus companies, and CENTRO, the local transit provider. Utica's train station has been extensively restored in partnership with Oneida County, and recently had an additional platform constructed on the westbound side that also provides connections with the Adirondack Scenic Railroad. In Albany-Rensselaer, a new station was constructed, adjacent to the Amtrak support facilities, by the Capital District Transportation Authority that could provide ample parking for passengers, expedite train movements, and allow for retirement of some redundant operating infrastructure. Station planning at these various station sites

along Empire Corridor considered and incorporated, to the extent possible, access to downtown areas (i.e., reconstruction of Buffalo-Exchange Street was selected over other more distal locations considered) and incorporated adequate parking and intermodal access.

Commenter Tsotsky, Richard

Comment I-694-4 I understand that you can't eliminate Depew or Buffalo. You have to have both downtown Buffalo because, one, you can go west. You can go west from Depew but you can not go west from downtown Buffalo the way the tracks are currently configured, but I understand that the Central Terminal if I am not mistaken you can go in both directions north through Toronto and west.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.

Commenter Cupoli, Edward

Comment I-695-1 My name is Ed Cupoli. I'm a resident of the Town of Guiderland. I worked for the State Legislature back in the '80s for a long time and in 1984 I was asked by then Assemblyman Bill White from Buffalo to go to a hearing in the building, the Mahoney Building, and it was on this question of high speed rail and I didn't know anything about it. I was supposed to be one of these guys that can figure things out.
My thinking is you should think in your plan about the future, not the past.
Because, I'm an economist. So do an analysis of the competitive advantages of each of those proposals on Buffalo, Rochester, Syracuse, and get some really good sense, or New York City.
What is the sustainability of these cities in the way we've known them with this kind of rail, versus the other kinds of transportation.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Economic costs and benefits of each alternative for the program have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1 ½ hours in 2035, compared to the Base Alternative.

Commenter Stone, Jeff

Comment I-696-1 I am looking at the plans of the Buffalo area of the basic model that's already being done no matter what happens, and I don't see anything happening with like the Buffalo stations and

the Depew stations. I mean to me it seems like the high speed is coming right into Buffalo and it ends at the Depew station, to me it seems like there should be something more there than just that little tiny station.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the stations in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. The High Speed Rail Empire Corridor Tier 1 EIS evaluates a range of improvements for the purpose of making decisions on corridor-level service. The focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-694-4.

Commenter Stone, Jeff

Comment I-696-2 I mean they're building nice stations at all of the other ones and figuring stuff out for them, I think that this is the other end of the crown over here. This is the jewel on the other end of the line, and it should show that. What they're doing there, what's there now, doesn't show that.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative.

Commenter Stone, Jeff

Comment I-696-3 I also think that they should take into consideration in between Buffalo and Niagara Falls and the Tonawanda area since the Buffalo/Niagara Falls section is never going to be high speed it would be a good idea to possibly think about putting a station somewhere in Tonawanda because I think that it would definitely get a lot of use.

Response Thank you for your comment regarding the location of stations on the Empire Corridor. The Tier 1 EIS considers using the existing stations in each of the alternatives at this time. Trip time reductions for the Build Alternatives as discussed in the Tier 1 EIS were based on the trains operating non-stop between the Buffalo-Exchange Street Station and the Niagara Falls Station, without any intermediate stations in the Tonawanda area, which is roughly midway in between. Tonawanda is considered to be driving distance (roughly 13 to 15 miles) from these stations, and adding a stop would increase travel times for other travelers.

Commenter Stone, Jeff

Comment I-696-4 My other thing is I think if this thing is ever built, the higher speed stuff, it needs to be completely separate from freight. That's what I got. That's really what I got. It's never going to work without it being separate from freight lines. There is no way to ever make it safe and fast enough without separating it completely. No matter what option that it is. That's what I got.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. Improvement of passenger rail service while maintaining safe and efficient freight operations along the Empire Corridor is one of the major goals for the High Speed Rail Empire Corridor Program. The importance of preserving and improving freight rail traffic to the economy of New York State has been a critical factor in the selection of the Preferred Alternative.

The Preferred Alternative, Alternative 90B, will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail and will involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.

Commenter **Doff, Frank C.**

Comment
I-697-1 I have been recently appointed director of board member of J. Park, Inc., which is a transportation organization. But in order for us to move ahead, surpass what's happening in Europe, we should come up with a more revolutionary concept in high speed rail. For example, so that U.S. will be ahead of the rest of the world. And we have a technology here right now, and I want to pass on some information. What is available in technology is available today in U.S. organizations. Because right now ET3 is setting up a pilot—a demonstration unit at Meadowlands, together with J. Parks. J. Parks is overhanging personal rapid transit, okay. That's nothing new. It is something that comes up with the energy crisis. It was put up at the college campus of West Virginia. So, since '93, that system has been in operation, and it has no fatality, or no injury on the over hundred something passengers.

Response Thank you for your comment in support of the High Speed Rail Empire Corridor, which have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. In reviewing the types of technologies to be used in providing the service, the focus was on using systems that would allow for connecting with the existing national and regional rail network on the Northeast Corridor.

Commenter **Ebina, Alexander**

Comment
I-698-1 And as a member of the Millennial generation, we Millennial recognize the importance of rail transportation. Many of my friends from college take the train.

Response Thank you for your comments supporting the High Speed Rail Empire Corridor Program the High Speed Rail Empire Corridor Program and for the need for improving rail passenger service on the route. Comments from the public have been considered in the selection by the FRA and NYSDOT of the Preferred Alternative, which will improve reliability, travel times, and frequency of train service..

Commenter **Ebina, Alexander**

Comment
I-698-2 I also endorse the Empire State Passenger Association's 110 option because it does offer the best of all worlds.

Response Thank you for your comment supporting the 110 Alternative, which has been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. For reasons of safety, CSXT, the owner of the right-of-way, requires a 30-foot track separation between freight and passenger tracks when passenger trains operate at 110 mph. In many places on the route, this is only possible by acquiring significant additional property.

Commenter **Ebina, Alexander**

Comment
I-698-3 Right now, the limitations you have is only giving you four trains a day doesn't give you a lot of travel flexibility.

Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West. Chapter 3 and Exhibit 6-9 of the Tier 1 EIS describe the increase in service proposed by the Preferred Alternative.
Commenter	Elias, Byron
Comment I-699-1	I think keeping the train separate would be good for everyone when you do have that occasional train derailment. Then you would have the additional tracks for both CSX and freight and for the passengers, to continue moving people with a very high percentage amount of service.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight rail. Alternative 90B would restore large sections of third and fourth track and would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Ellis, Tom
Comment I-700-1	I endorse the comments that Dominick Calsolaro said about the Livingston Avenue Bridge.
Response	Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge .
Commenter	Ellis, Tom
Comment I-700-2	One is, I think we need more rail stations. Two concerns the frequency of travel and the third issue is safety issues. I'd like to see stations constructed in downtown Amsterdam and in Fonda and in Little Falls that could be used.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS is a corridor level evaluation that only considers use of the existing stations. Alignments and rights of way for each of the different alternatives do not include new stations. Additional stations could be addressed in future studies. Chapters 2 and 3 address safety for the existing corridor and the program alternatives.
Commenter	Ellis, Tom
Comment I-700-3	As far as frequency, I would like to see trains between Albany and Buffalo running at least eight times a day, and I'd like to see more frequent rail travel on weekends.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program, which will improve intercity rail passenger service in New York State through infrastructure investments and operational improvements. The Preferred Alternative, Alternative 90B, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West.

Commenter	Ellis, Tom
Comment I-700-4	I think that in the United States we need to establish a much higher level of safety in the rail industry overall. We need to raise it to the level, if possible, to the safety level that we have in the air industry.
Response	Thank you for your comments on the importance of safety being a part of the High Speed Rail Empire Corridor Program. The Preferred Alternative, Alternative 90B, will add additional trackage, the majority of which (over 280 miles) will consist of third dedicated track. This will better segregate passenger and freight rail, which will allow improvements in both rail safety and travel speeds. Chapters 2 and 3 address safety for the existing corridor and the program alternatives. The Tier 1 FEIS accounts for several types of fencing and warning systems, including installation of perimeter fencing on both sides of the right-of-way on portions of the right-of-way to prevent trespassing. The Tier 1 FEIS addresses fencing and other safety features for the Preferred Alternative in Section 3.3.3, under the "Safety" section.
Commenter	Olejniczak, Hank
Comment I-701-1	I am here mainly because I am promoting along with the high speed rail improvements, which I think we need, the concept of using the Central Terminal as the train stop in Buffalo. money is being spent in Niagara Falls over \$50 million to give them a train station. Rochester just got \$23 million. Schenectady is getting money. Syracuse is getting money. Albany had money to build their station. if that building isn't used in the next couple of years, it's going to be something that the city and the county is going to be stuck with it. It's going to be costing them over 20 million minimum to knock that building down if the group walks away from it because it's getting to that point right now. This would be a catalyst for the East Side development, and it would be a horrible shame to see that building end up being torn down as opposed to spending the money on it to fix it up and keep it as a useful part of the community.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. Improvement to the passenger rail facilities in the City of Buffalo area is an important goal of the High Speed Rail Empire Corridor Program. NYSDOT has implemented upgrades at the existing rail station at Buffalo-Depew to improve/rehabilitate the parking lot and enhance passenger access to comply with Americans with Disabilities Act requirements. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Olejniczak, Hank
Comment I-701-2	We only have one pick at the can. Whatever we build is going to be something we're going to be stuck with for the next 100 years. There is not going to be someone saying in 2035 let's upgrade that track to something else.

Response	Thank you for your comments on the Tier 1 EIS. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B will provide approximately 370 miles of additional trackage to better segregate passenger and freight traffic and will reduce travel times between New York City and Niagara Falls by 1½ hours in 2035, compared to the Base Alternative. Alternative 90B, the Preferred Alternative, would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would double the frequency of service on Empire Corridor West. Alternative 90B would also involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Descriptions of the alternatives considered and comparisons of benefits, costs, and environmental and social impacts can be found in Chapters 3 and 6 of the Tier 1 EIS.
Commenter	Olejniczak, Hank
Comment I-701-3	If you have trains that were reliable and could do it in less than six hours or six hours, you're going to see no one taking airplanes in to New York which is what they want because there is enough people traveling farther around the country than we have right now.
Response	Thank you for your comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route. Alternative 90B will reduce travel times between New York City and Niagara Falls by 1½ hours and would increase ridership by 1 million in 2035 over the Base Alternative.
Commenter	Olejniczak, Hank
Comment I-701-4	Another thing that really, really bothers me is all the stations that I stop in from New York to Philadelphia, Buffalo is the only place in the state that has not seen any money expended on their train station.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the need for station improvements in Buffalo, New York. Improvement to the passenger rail facilities in the City of Buffalo, including a new station development at Buffalo-Exchange Street and updates at the Buffalo-Depew Station, are discussed in the response to Comment I-701-1.
Commenter	Giles, Elizabeth
Comment I-702-1	I am first of all in favor of I believe it's Alternative 125, the highest speed possible. It would have been better to have even higher speeds, but that's what is in the offing so we will try and go with that if that's all the choice we have. I believe that we should move towards rail replacing air travel, particularly on the shorter distances like between here and New York, here and Boston, here in Chicago. Locally, I would see the benefit as being, you know, the higher speeds we have, the tighter the connection between the New York City area and Upstate so that a lot of businesses who are finding it maybe a little on the expensive side to do business down there would think that relocating in Syracuse, Rochester, Buffalo would be more feasible if it were almost like a suburban commute instead of as long a distance as it seems right now.
Response	Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts. Alternative 90B would also shorten the trip from New York City to Niagara Falls by 1½ hours. Alternative 125 was dismissed, based on greater impacts (to 2,000 to 3,000 acres of land) and higher costs (more than double the costs for the Preferred Alternative).

A substantial drawback of Alternative 125 is that it would take the longest time to construct and would be the costliest alternative. One of the drawbacks of Alternative 125 is that express service would not be directly provided to Niagara Falls, Rome, Utica, Amsterdam, and Schenectady.

Commenter Giles, Elizabeth

Comment I-702-2 I think it's crucial to revive Central Terminal as part of any of these plans that would go through. I would be for closing the Exchange Street Station and of course closing the Depew Station and then serving preferably by light rail but however it can be done to get a local rail going between downtown and the airport by way of Larkinville, the Central Terminal, Walden Galleria Mall, thruway mall, airport.

It would help to save one of our great historic relics, get it relevant again and seen, and I would think in the long run it would be a lot less costly to revive the Central Terminal as a premiere train station than to start building a multimillion dollar multimillion transit center from scratch somewhere else. Central Terminal was located where it was for a reason. It's not downtown because trains going to Chicago I guess would have to kind of back up from downtown, and it added an hour onto the trip.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment I-701-1.

Commenter Giles, Elizabeth

Comment I-702-3 I do believe that Central Terminal would be a perfectly viable passenger station for Buffalo provided that it is served by local rapid transit between downtown and the airport preferably light rail but I believe the NFTA is looking at bus rapid transit along existing publicly owned rights of way that would -- I believe some one was telling me earlier like 125 plan will maybe necessitate a new station located between somewhere between Exchange Street and Depew, and that's the terminal right there.

Response Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Alternative 125, which would have required a new or relocated Buffalo station location, has been dismissed from further consideration. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station, for the reasons described in the response to Comment 701-1.

Commenter Glass, Bradley

Comment I-703-1 regarding the restoration of a pedestrian connection on the Livingston Avenue Bridge. I think this is something that should be greatly considered.

Response Thank you for your comment regarding pedestrian access on the Livingston Avenue Bridge between Albany and Rensselaer, New York. The Livingston Avenue Bridge Project (and associated EA) is along the same corridor and is considered a component of the program for Tier 1 assessments, but is being designed and implemented as a separate project. The Livingston Avenue Bridge Project has independent utility due to its physical condition. For more information on the Livingston Avenue Bridge, please visit the LAB project website www.dot.ny.gov/livingstonavebridge.

Commenter Greenburg, Richard

Comment I-704-1	I hate to see this, but I am probably standing up here as a conspiracy theorist. I looked at these plans, all of the plans, as being only marginally better than what we have today. They're really not going to change transportation in New York State or any place else.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. As noted in the Tier 1 FEIS, Alternative 90B would double the service frequency along Empire Corridor West. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 of all of the alternatives considered and would increase ridership by 1 million over the Base Alternative.
Commenter	Greenburg, Richard
Comment I-704-2	There is one thing that's missing I believe is the link between Buffalo and New York City and the link between Erie and Lackawanna. It's still there. It's sitting there largely abandoned.
Response	Thank you for your comments and interest in the High Speed Rail Empire Corridor Program. The HSR Empire Corridor Program connects New York City with the largest cities in New York State. The Empire Corridor is identified with the rail route that extends from New York City to Albany through the Hudson Valley, and then west from Albany-Rensselaer to Niagara Falls, through Mohawk Valley and across Central and Western regions of New York City. Use of the Erie and Lackawanna abandoned right of ways would not follow the areas outlined in the program.
Commenter	Haremza, Jason
Comment I-705-1	I'm in support of Option 125. fourteen billion dollars sounds like a lot, but how many billions are we spending on the Tappan Zee Bridge Replacement which is the replacement of a single bridge?
Response	Thank you for your comments in support of Alternative 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 would create a dedicated, 2-track passenger right-of-way over much of the Empire Corridor. Alternative 90B would restore large sections of third and fourth track, but would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts. Based on this, and resulting lower costs and impacts, Alternative 90B has been selected as the Preferred Alternative. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered.
Commenter	Haremza, Jason
Comment I-705-2	Option 125 effectively makes Buffalo and Syracuse commutable and expands the job market to combine metropolitan areas of three million people or more.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program. Although Alternative 125 would improve service to Buffalo-Exchange Street and Syracuse, the 125 express service would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew. The Preferred Alternative, Alternative 90B, will improve service to these existing stations.
Commenter	Haremza, Jason
Comment I-705-3	Connections to Canada are good and necessary, but I feel usage is limited until a more effective border crossing process is made. It doesn't matter how fast the train goes if you sit at the border for two hours while customs does its work.

Response	Thank you for your comments on the border crossing process. Currently, the High Speed Rail Empire Corridor Program focuses on improvements between New York City and Niagara Falls. The newly reconstructed Niagara Falls Station Intermodal Transportation Center was designed to improve the border crossing process.
Commenter	Haremza, Jason
Comment I-705-4	I know this hearing is about High Speed Rail, but it cannot be divorced from the Rochester Station Project. I would respectfully ask NYSDOT to update the website in regards to the project time line and schedule a public meeting specific to the Station Project to address some of the issues that have been raised by other speakers tonight.
Response	Thank you for your comments regarding the Rochester Station Project. NYSDOT and the City of Rochester are supporting a project to build a new station at Rochester, with the construction completed in 2017. Further information is available at: www.dot.ny.gov/rochesterintermodalcenter .
Commenter	Hellwitz, Bob
Comment I-706-1	I am in favor of the 125 plan because there is a dedicated line. Also in Western New York we have a beautiful train station on the East Side of Buffalo, and I would like that be incorporated into these plans. It would be development for East Side of Buffalo and bring jobs, and it would be a benefit to the East Side.
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program and the use of the former Central Terminal in Buffalo, New York. Buffalo Central Terminal was not included in the analysis of the Build Alternatives in the Tier 1 EIS, since the focus was on utilizing existing stations along the Empire Corridor, including the stations at Buffalo-Depew and Buffalo-Exchange Street. The building is on the north side of the main tracks at the west end of CSX Transportation's Frontier Yard and is not easily accessible for passenger trains. Alternative 125, which would have required a new or relocated Buffalo station location, has been dismissed from further consideration. In the spring of 2017, the Governor and Mayor formed and participated in a Train Station Site Selection Committee, that also included elected, state, county, city officials, Amtrak, and other public and private transportation officials. The committee, tasked with evaluating prospective locations for a Buffalo Amtrak/bus station, including Central Terminal, voted to approve a downtown station site closer to the existing Buffalo-Exchange Street Station. Some of the primary reasons for the selection of the downtown site included economic benefits to the downtown business district, as well as population densities that support the transit use. Construction of a new terminal at the Buffalo-Exchange Street Station site finished in November 2020.
Commenter	Hubiak, Joe
Comment I-707-1	We have land, farmland on the other side of the railroad tracks and I know there's farmers all the way from Albany to Buffalo that have land on the other side of the railroad tracks and that's what we're here for, to know if our access to our land is still going to be -- is going to be accessible.
Response	Thank you for commenting on the High Speed Rail Empire Corridor Program. Alternative 90B would provide 370 miles of additional trackage and would minimize possible impacts on farmlands by the location of tracks primarily within the existing right-of-way, as discussed in Section 4.18. Section 4.18 of the Tier 1 EIS describes the general impacts of the program alternatives on farmlands, potential mitigation, and further analysis to be conducted in Tier 2 studies. Potential mitigation measures for work affecting agricultural properties could include installation of crossings for farm animals or creation of new temporary farmland access roads, if the proposed work may impinge on these uses. In Tier 2, the mapping of the railroad alignments will be further refined and access across the right

of way will be reviewed with measures identified to provide for the safe movements of trains at grade crossings.

Comments from the public, discussing the safety of the operation of the high speed trains for both grade crossings and along the right of way, have been an important consideration in the selection of the Preferred Alternative by FRA and NYSDOT.

Commenter **Thomas, Colin Fox**

Comment I'm right now supporting the 125 plan
I-708-1

Response Thank you for your comment supporting the 125 Alternative and the benefits from high speed rail. The Preferred Alternative, Alternative 90B, was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance. Alternative 90B would result in the best overall on-time performance for Amtrak service in 2035 and, at the same time, would involve the least delay-minutes per 100 train miles operated for freight trains of all of the alternatives considered. Unlike the 125 express service, which would bypass existing stations at Schenectady, Amsterdam, Rome, Utica, and Buffalo-Depew, it will improve service to these existing stations.

Commenter **Thomas, Colin Fox**

Comment I like how there's more intermodal transport centers in locations. I hope that can be expanded somehow to all the locations, and as well as to make sure they are accessible to the downtowns
I-708-2

Response Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS evaluates a range of corridor-level service improvements for the purpose of making decisions on corridor-level service, including service reliability, service frequency, and train speeds. The focus was on utilizing existing stations along the Empire Corridor. A number of stations along the route that are accessible to downtown urban centers (including Niagara Falls, Buffalo-Exchange Street Station, Rochester, and Syracuse) have been reconstructed in recent years.

Commenter **Thomas, Colin Fox**

Comment And I just support the idea of increasing ridership on rail to help reduce the amount of drivers on the road, which saves on transportation costs, wear and tear on our roads and highways, as well as reduces pollution and greenhouse gas emissions and pollution.
I-708-3

Response Thank you for your comments, your environmental and economic concerns have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Ridership and revenue opportunities have been an important consideration in selecting the Preferred Alternative. The net annual operational benefits for the Preferred Alternative would be roughly equivalent to eliminating the emissions associated with the energy and electricity consumption of 2,500 to 4,200 average U.S. single family homes every year.

Commenter **Lepine, Maurice**

Comment I'm also a teacher at Baldwinsville Central District, teaching technologic education. However, I support the 110 and the 125. Being a person who works with young people, I think that if we want to keep best and brightest in this area, in Central New York, whether you're at Buffalo or anywhere along the corridor, you want to have transportation where they can go to school and come back, go to their jobs come back home and stay home to their business and bring -- and bring the monies in.
I-709-1

Response	Thank you for your comments in support of Alternatives 110 and 125 and the program. Economic costs and benefits of each alternative, for the High Speed Rail Empire Corridor Program, have been considered by FRA and NYSDOT in the selection of the Preferred Alternative. Alternative 90B was selected as the Preferred Alternative, as it would add 370 miles of tracks and would constrain more of the additional trackage to the existing right-of-way than Alternatives 110 and 125. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Lepine, Maurice
Comment I-709-2	However, I support the 110 and the 125.
Response	Thank you for your comments in support of Alternative 110 and 125, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 would create a dedicated, 2-track passenger right-of-way over much of the Empire Corridor and was dismissed due to higher costs and impacts. Alternatives 90B and 110 would restore large sections of third and fourth track, but Alternative 90B would constrain more of the additional trackage to the existing right-of-way, substantially reducing costs and impacts.
Commenter	Love, John C.
Comment I-710-1	The high speed rail corridor of New York State, I believe, ought to be upgraded to a 90 mile per hour, or 110 mile-per-hour corridor, at least.
Response	Thank you for comments supporting the High Speed Rail Empire Corridor Program and the need for improving rail passenger service on the route. In selecting Alternative 90B as the Preferred Alternative for the High Speed Rail Empire Corridor Program, the FRA and NYSDOT selected a program of improvements largely situated within the existing rights-of-way, thereby minimizing both costs and impacts.
Commenter	Love, John C.
Comment I-710-2	Just to give some statistics, Amtrak makes over 40 million dollars in operating revenue on its routes under 400 miles in length. Those are Amtrak's regional routes. Amtrak is not a money losing proposition. As one man put it, there are two systems within Amtrak. There is a regional system. There is a long distance system. The long distance system, we know, has had financial conundrums that have come against it. The regional system is profitable. And a higher speed for the regional trains, I think, is fully justifiable, especially in light of the fact that they are making a profit. According to the Brookings Institute, above 40 million dollars a year profit.
Response	Thank you for your comments regarding economic concerns, which have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Ridership and revenue opportunities have been an important consideration in selecting the Preferred Alternative. Chapters 5 and 6 of the Tier 1 EIS describe the costs and benefits of the program alternatives.
Commenter	Love, John C.
Comment I-710-3	Now, another fact, Norfolk Southern Railroad, Norfolk Southern Corporation, paid almost a billion dollars in taxes in one of the recent fiscal years, within the last five years. Should not revenue coming into our government from railways be used to improve railway infrastructure. Even for privately half freight hauling railroads, as we upgrade these to higher speeds, and dare I say high speed.
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program. The program is supported by both the Federal Railroad Administration and the New York

	State Department of Transportation and would be subject to the funding requirements of both the federal and state governments.
Commenter	Maray, Carl, Licensed Professional Engineer, RL Banks, Licensed Professional Engineer, RL Banks
Comment I-711-1	<p>The other opportunities I've worked with is RL Banks in Washington. I represent them tonight and they work largely with FRA funding and service of transportation board issues in Washington.</p> <p>Getting back to the NEPA Process. One of the things we learned in Dallas on system quarters was to get a categorical exclusion. I would suggest breaking the program down into pieces. You already broke it down between Poughkeepsie and Albany which is smart, very smart on Joe Boardman's part and you folks on the DOT. I think you will need that to get through the CSX issues with the service transportation board.</p>
Response	Thank you for your comments on the High Speed Rail Empire Corridor Program. The Tier 1 EIS outlines a program of individual improvements to be further evaluated for implementation in Tier 2, as suggested in your comment. In the Tier 2 assessments, individual projects or groups of projects will be further advanced in terms of costs, scheduling, and funding, according to the Service Development Plan.
Commenter	Maray, Carl, Licensed Professional Engineer, RL Banks, Licensed Professional Engineer, RL Banks
Comment I-711-2	I would be in favor for the 125. I would like to see that with a stop in Utica. I think it was previously mentioned with partially the new partnership between The School of Health and Science in Albany and the school in Utica IT, SUNY IT. I think it would be a big plus to move scientists and engineers back and forth because they will be working together. I think the station stop in Utica, it seems you've got one in the Falls, but I think it's the gateway to the Adirondacks.
Response	Your comments about preserving and offering intercity rail passenger service for the City of Utica have been considered by the FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Alternative 125 was designed to help cut the distance between Albany and Syracuse by 14 miles, but one of the major drawbacks of this route is that it passes to the south of the stations on the current Empire Corridor in the Mohawk Valley between Syracuse and Albany. Therefore, 125 express service would not serve Rome, Utica, Amsterdam and Schenectady. Alternative 90B was selected over Alternative 125, based on its substantially lower costs, impacts, and its performance, and would increase service to Utica, as discussed in Chapter 3 of the Tier 1 EIS.
Commenter	Pyke, Gayle
Comment I-712-1	<p>And I was mostly here tonight to find out what the time table was for the new station in particular. I also represent retirees in the area and I do go to Albany to lobby for health care protection and so forth in the interest of seniors. I can't get the seniors that are local to use the train. So we have seventy and eighty-year-old people driving seventy miles an hour on the thruway, which really scares me.</p> <p>But let's get that new station. And I'm also interested what is meant by the High Speed Rail.</p>
Response	Thank you for your comments in support of the High Speed Rail Empire Corridor Program, which have been considered by FRA and NYSDOT in the selection of Alternative 90B as the Preferred Alternative. Chapter 3 of the Tier 1 EIS describes the improvements and operations proposed, and Section 2.5.5 presents a description of the status of station improvements along Empire Corridor.
